PART I

REPORT OF THE DIRECTOR ON THE OPERATIONS OF THE MINT SERVICE FOR THE FISCAL YEAR 1931

PART I

REPORT OF THE DIRECTOR ON THE OPERATIONS OF THE MINT SERVICE FOR THE FISCAL YEAR 1931

REPORT OF THE DIRECTOR OF THE MINT

TREASURY DEPARTMENT,
BUREAU OF THE MINT,
Washington, D. C., September 22, 1931.

SIR: In compliance with the provisions of section 345, Revised Statutes of the United States, I have the honor to submit herewith a report covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1931, being the fifty-ninth annual report of the Director of the Mint. There is also submitted for publication in connection therewith the annual report of this bureau upon the production and consumption of the precious metals in the United States for the calendar year 1930.

OPERATION OF THE MINTS AND ASSAY OFFICES

Institutions of the mint service

During the fiscal year ended June 30, 1931, 10 mint-service institutions were in operation; coinage mints at Philadelphia, San Francisco, and Denver; assay office at New York, which makes large sales of fine gold bars; mints at New Orleans and Carson City conducted as assay offices; and assay offices at Boise, Helena, Seattle, and Salt Lake City. The six last-named institutions are, in effect, bullion-purchasing agencies for the large institutions and also serve the public by making assays of ores and bullion. Electrolytic refineries are operated at the New York, Denver, and San Francisco institutions.

Coinage

The domestic coinage executed during the past fiscal year was the smallest in both value and pieces for many years, notwithstanding the 84,181,000 bronze 1-cent pieces (value $841,810) made to replenish stock. The total number of domestic pieces executed was 98,236,500, with value $6,615,110, as compared with the prior year's 399,467,200 pieces valued at $16,278,180. Gold coin valued at $4,570,000 was made to clean up small lots of partially worked metal; the subsidiary silver coinage totaled $795,300 face value, and 5-cent nickel coins had face value of $408,000.

The foreign coinage executed likewise was of small volume, 2,355,120 pieces of gold and silver, made at the Philadelphia Mint, comparing with the prior year's 3,485,000 pieces of silver, nickel, and bronze.

The grand totals of pieces executed compare as follows: Fiscal year 1931, 100,591,620; 1930, 402,952,200.

Gold operations

Gold acquired by the Government at the several mint-service institutions during the fiscal year 1931 totaled $210,791,181.04; United States gold coin received by the mints for recoinage amounted to $3,358,729.61; transfers of gold between mint offices totaled

$10,563,728.38; the aggregate amount of gold received by the several mint-service institutions during the fiscal year 1931 was $224,713,639.03, which compares with $457,045,562.62 during the prior year.

Silver operations

Receipts of purchased silver during the fiscal year 1931 totaled 2,193,313.53 fine ounces, the average cost of which was 32.61 cents per ounce, total cost being $715,231.83. This includes 999,350.34 fine ounces refined silver bought in the open market for coinage. Silver received in exchange for bars bearing the Government stamp totaled 1,368,000.79 fine ounces; United States silver coin received for recoinage totaled 3,615,195.75 fine ounces, the recoinage value being $4,997,678.59; silver deposited in trust by other governments totaled 569,061.57 fine ounces; and transfers between mint-service offices totaled 106,327.60 fine ounces, making the aggregate quantity of silver received by the several mint-service offices during the fiscal year 7,851,899.24 fine ounces, as compared with 10,035,781.97 ounces during the prior year.

The New York market price of silver during the fiscal year ended June 30, 1931, averaged $0.31879; the lowest price was $0.260625, on February 16, 1931, the lowest ever recorded, and the highest price $0.373125, on September 18, 1930. London's lowest price of 12 pence per standard ounce was recorded February 9, 1931.

Refineries

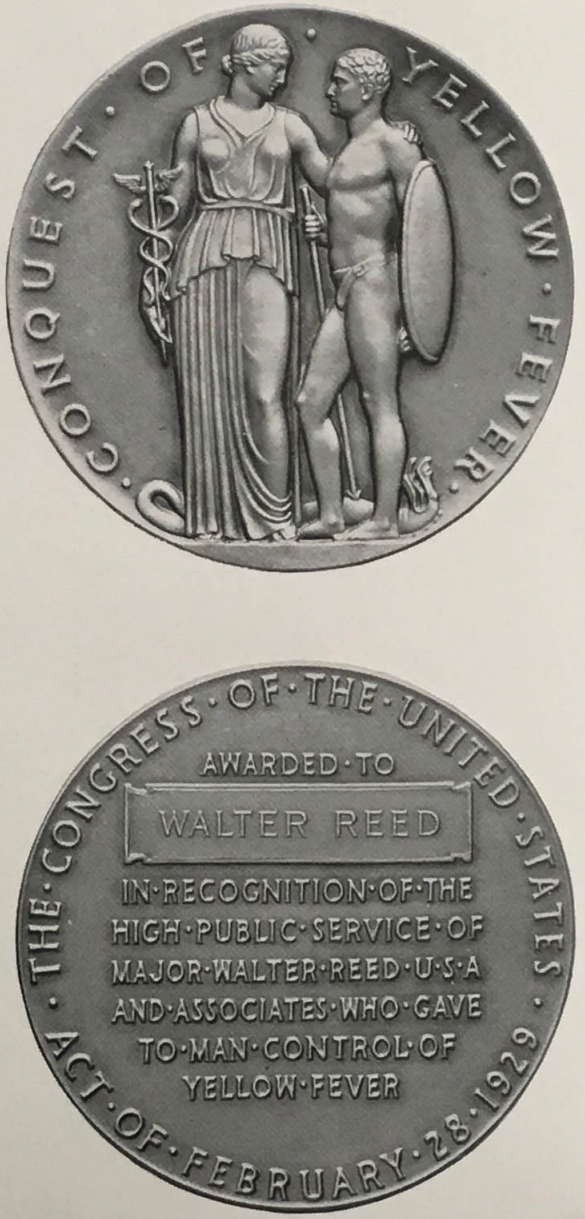
The refinery at the New York assay office was not operated during the fiscal year just past. In anticipation of moving into a new building being constructed outside the congested financial district the refinery was dismantled and a thorough clean-up made for recovery of metals absorbed by apparatus, etc. The refineries operated at Denver and San Francisco produced 1,365,444 fine ounces (46.8 tons) of electrolytically refined gold during the past fiscal year, which compares with 94.47 tons in the prior year from the three refineries; and 1,811,491 fine ounces (62.1 tons) of electrolytically refined silver, which compares with 108.2 tons during the prior year from the three refineries.

The stock of gold and silver in unrefined bullion on hand was increased during the past year by about 89 tons, to 529 tons, as compared with the prior year's increase of about 28 tons.

Additions and improvements

The following improved devices were introduced in the mint institutions during the fiscal year under review:

Electric melting of gold and silver deposits has been established as regular practice at the Philadelphia mint and New York assay office. This became possible as the result of improvements in design and modernization of equipment for electric induction melting, together with the commercial manufacture of suitable crucibles, of carbon bonded silica carbide. At Philadelphia the installation consists of two furnaces that accommodate standard No. 20 crucibles and three smaller furnaces. These provide for the melting of all deposits weighing up to 1,200 ounces. The installation at New York is a temporary arrangement pending removal to the new building being erected.



WALTER REED MEDAL

This type of melting results in much lower heat-radiation with corresponding greater comfort for personnel, reduces melting losses of precious metals, and increases uniformity of mixture of the bars produced. Costs compare favorably with other means of producing melting temperatures when full operation of the institution gives high electric current consumption with resulting low unit costs of current.

The grinding device used at the Philadelphia mint in lieu of filing, for smoothing the edges of silver coinage ingots, as finally adopted consists of a well housed pair of special alundum wheels on the ends of the same mandrel, mounted on a bench. The work is done better, much faster, and less laboriously, and without scattering the silver more than does filing. The fine particles are separated from the coarse and fire-refined before being used again for coinage ingots, while coarse particles do not require preliminary treatment.

Number of employees

The small demand for coin has made it possible to refrain from filling a number of positions which became vacant by reason of retirement, death, and resignation, with the result that the roster of mint service employees is shorter than for a long series of years. The number on the rolls June 30, 1931, was 612, which compares with 652 one year earlier, a reduction of 40.

Walter Reed Medal

The Congress of the United States, by act approved February 28, 1929, awarded gold medals of honor to Maj. Walter Reed and his associates, in recognition of the high public service rendered and disabilities contracted in the interest of humanity and science as voluntary subjects for experimentation during yellow fever investigations in Cuba. The medal is illustrated on the opposite page. The design, by Thomas H. Jones, shows two figures, standing, the first representing medical science, garbed in the classic tunic, holding in her right hand the caduceus, and with her left arm in a gesture of protection of the soldier upon the right, who bears a lance and shield. At their feet in the background is a figure symbolizing pestilence defeated. Around the border, the inscription "Conquest of yellow fever."

Stock of Coin and Monetary Bullion in the United States

On June 30, 1931, the estimated stock of domestic coin in the United States was $2,673,898,415, of which $1,698,433,690 was gold, $539,958,327 standard silver dollars, $308,619,365 subsidiary silver coin, and $126,887,033 minor coin.

The stock of gold bullion in the mints, assay offices, and Federal reserve banks on the same date was valued at $3,257,487,409, an increase during the year of $218,927,208; the stock of silver bullion was 16,323,703.50 fine ounces, an increase of 5,194,146.43 fine ounces.

Production of Gold and Silver

Domestic gold production during the calendar year 1930 was $47,247,600, as compared with $45,651,400 in 1929. The output has declined to about 47 per cent of that for the record year 1915, when the total was $101,035,700.

Silver of domestic production during 1930 totaled 50,748,127 ounces, valued at $19,538,029; this compares with 61,327,868 ounces, valued at $32,687,754, for 1929, and with the record production of 1915, 74,961,075 fine ounces, valued at $37,397,300.

Industrial Consumption of Gold and Silver

Gold consumption in the industrial arts during the calendar year 1930 is estimated at $42,689,379, of which $15,177,739 was new material.

Silver used in the arts is estimated at 36,343,207 fine ounces, of which 26,874,378 fine ounces was new material.

As compared with the prior year, silver consumption was about 6,000,000 ounces less and gold consumption about $14,200,000 less.

Import and Export of Domestic Gold Coin

The net import of domestic gold coin during the fiscal year ended June 30, 1931, according to statistics compiled by the Bureau of Foreign and Domestic Commerce, was $213,742,550; during the prior fiscal year there was net import of $92,264,082. During the 17 fiscal years 1915–1931, since the opening of the World War, there has been a net export of $808,886,520. Since 1870 the net export of domestic gold coin has been $1,686,535,584, as per tabulation by fiscal years, which may be found in another section of this volume.

Appropriations, Expenses, and Income

Appropriations available for mint service during the fiscal year 1931 totaled $1,689,160, and reimbursements to appropriations for services rendered amounted to $58,344.04, making a total of $1,747,504.04.

Expenses amounted to $1,558,584.65, of which $1,531,570.22 was chargeable to appropriations and $27,014.43 chargeable to income.

The income realized by the Treasury from the mint service aggregated $1,624,411.09, of which $1,138,698.29 was seigniorage. The seigniorage on subsidiary silver coin was $128,337.64; on nickel coin, $285,977.38; and on bronze coin, $724,383.27.

Summary of appropriations, expenses, and balances, fiscal year 1931

Items	Salaries and expenses	Transportation of bullion	Total
Appropriations	$1,679,160.00	$10,000.00	$1,689,160.00
Earnings credited to appropriations	58,344.04		58,344.04
Total available	1,737,504.04	10,000.00	1,747,504.04
Expenses	1,528,488.01	3,082.21	1,531,570.22
Unexpended balances	209,016.03	6,917.79	215,933.82

Deposits of gold and silver, income, expenses, and employees, by institutions, fiscal year 1931

The number and value of deposits, transfers, gross income, and expenses for the fiscal year 1931, and the number of employes on June 30, 1931, at each institution are shown in the following table:

Institutions	Number of deposits of gold and silver	Number of mint service transfers	Coining value of gold and silver received	Gross income	Gross expense	Excess of income (+) or of expense (−)	Employees June 30, 1931
Philadelphia	7,463	247	$18,140,684.13	$761,586.64	$657,880.48	+$103,706.16	272
San Francisco	9,043	952	84,237,704.00	452,149.88	263,132.57	+189,017.31	101

Total coinage, pieces	288,687,000	56,259,000	54,521,200	----	399,467,200

Purchase of Minor-Coinage Metal for use in Domestic Coinage

During the fiscal year 1931 minor-coinage metals were purchased totaling 13,523,256.25 troy ounces, at a cost of $102,770.17, as below:

Mint	Troy ounces	Cost
Philadelphia	9,518,089.59	$71,317.41
San Francisco	1,554,102.08	12,239.87
Denver	2,451,064.58	19,212.89
Total	13,523,256.25	102,770.17

Minor-Coin Distribution Costs

The minor-coinage distribution costs paid during the fiscal year 1931 from the profits on minor coinage amounted to $25,843.09, as follows:

Transportation	$18,795.70
Insurance	14.86
Containers	7,032.53
Total	25,843.09

Minor Coins Outstanding

The following statement shows the coinage of minor coins, by denominations, the amount on hand at the mints, issued, melted, and outstanding June 30, 1931. Minor coins were first manufactured at the Philadelphia Mint in 1793; at the San Francisco Mint in 1908; at the Denver Mint in 1911.

Items	Coined	On hand at mints	Issued	Melted	Amount issued and outstanding June 30, 1931
Philadelphia Mint:					
Copper half cents [1]	$39,926.11		$39,926.11	$0.64	$39,925.47
Copper cents	1,562,887.44		1,562,887.44	383,019.06	1,179,868.38
Copper-nickel cents	2,007,720.00		2,007,720.00	808,482.39	1,199,237.61
Bronze cents	47,276,076.83	$1,078,873.60	46,197,203.23	1,119,249.28	45,077,953.95
Bronze 2 cents	912,020.00		912,020.00	343,215.48	568,804.52
Nickel 3 cents	941,349.48		941,349.48	287,017.36	654,332.12
Nickel 5 cents	68,191,573.10	1,487,175.21	66,704,397.89	6,875,890.40	59,828,507.49
Total	120,931,552.96	2,566,048.81	118,365,504.15	9,816,874.61	108,548,629.54
San Francisco Mint					
Bronze cents	4,824,720.00	447,640.00	4,377,080.00	28,483.88	4,348,596.12
Nickel 5 cents	4,339,150.00	666,850.90	3,672,299.10	187,375.69	3,484,923.41
Total	9,163,870.00	1,114,490.90	8,049,379.10	215,859.57	7,833,519.53
Denver Mint:					
Bronze cents	5,124,000.00	202,414.88	4,921,585.12	25,707.78	4,895,877.34
Nickel 5 cents	5,718,015.00	191,418.05	5,526,596.95	349,749.05	5,176,847.90
Total	10,842,015.00	393,832.93	10,448,182.07	375,456.83	10,072,725.24
Grand total	140,937,437.96	4,074,372.64	136,863,065.32	10,408,191.01	126,454,874.31
Deduct $5.05 copper cents, $20.02 bronze 2-cent pieces, and $95.31 nickel 3-cent pieces melted at San Francisco Mint, coined at Philadelphia Mint				$120.38	
Deduct $12.32 bronze 2-cent pieces and $1.38 nickel 3-cent pieces melted at Denver mint, coined at Philadelphia Mint				13.70	
					134.08
Total amount outstanding					126,454,740.23

[1] There is no record of the melting of the old copper half cents, but it is believed that few, if any, are now in circulation.

Operations of the Assay Departments

The principal work of the assay departments of the coinage mints and the assay office at New York during the fiscal year 1931 is summarized as follows (number of items):

Items	Philadelphia			San Francisco		
	Samples	Assays	Reports	Samples	Assays	Reports
Silver purchases (fine bars)	943	943	943			
Deposits and other purchases	16,741	57,596	6,987	22,473	83,274	9,360
Redeposits				2,024	4,687	672
Gold-coinage ingots	24	34	8

Proof Bullion (1.000 Fine)

In order to establish uniformity in assay of bullion in the offices of the mint service all proof gold and proof silver is made at the mint at Philadelphia and furnished to other offices when required.

The amount made during the fiscal year 1931 was: Gold, 338 ounces.

Operations of the Melting and Refining and of the Coining Departments, Fiscal Year 1931

The aggregate quantity of metals operated upon in the above-mentioned departments of the coinage mints and assay office at New York during the fiscal year ended June 30, 1931, was 12.8 million fine ounces of gold and 13.2 million fine ounces of silver. There were also operated upon at the coinage mints 41.5 million ounces of minor coinage metal. The figures in the table following are based on the figures obtained at the settlements of the accounts.

Legal limits of wastage on the whole amount delivered by the superintendent to operative officers, as prescribed in section 3542, Revised Statutes, are as follows: Melter and refiner—gold, 0.001; silver, 0.0015; coiner—gold, 0.0005; silver, 0.001.

Refining Operations

The net product of electrolytically refined gold and silver of the mint service during the fiscal year 1931 was 3,176,934.717 fine ounces; other electrolytic output included the equivalent of the refined metals used for aiding the processes, 613,828.215 fine ounces; the product of melting operations (only) totaled 2,740,722.381 fine ounces, making the total output of the refineries 6,531,485.313 fine ounces. Details are shown in the following table:

Wastage of Coinage Metal, and Loss on Sale of Sweeps

The value of metals wasted in the operative departments during the fiscal year ended June 30, 1931, was $2,175.74. A loss of $9,134.35 occurred from the difference between the assay value of the bullion contained in sweeps sold and the amount received for the same. Details are given in the table following:

Item	Mint at—			Assay office at New York	Total
	Philadelphia	San Francisco	Denver		
Silver wastage:					
Melting and refining department	$427.79	$475.66	----------	----------	$903.45
Coining department	94.90	6.05	----------	----------	100.95
Nickel wastage:					
Melting and refining department	197.14	26.82	$10.29	----------	234.25
Coining department	84.60	16.09	----------	----------	100.69
Bronze wastage:					
Melting and refining department	741.53	8.24	19.81	----------	769.58
Coining department	61.60	1.46	3.76	----------	66.82
Loss on sale of sweeps	1,390.44	693.52	1,449.72	$5,600.67	9,134.35
Total wastage and loss	2,998.00	1,227.84	1,483.58	5,600.67	11,310.09
Reimbursements:					
Nickel and bronze wastage on domestic coin, from minor coinage profits	1,084.87	52.61	33.86	----------	1,171.34
Silver department wastages offset by other departmental surpluses	522.69	481.71	----------	----------	1,004.40
Other wastages and loss on sweeps, from contingent appropriations	1,390.44	693.52	1,449.72	5,600.67	9,134.35
Total reimbursements	2,998.00	1,227.84	1,483.58	5,600.67	11,310.09

Engraving Department

The engraving department (at the Philadelphia mint) made 748 working dies for domestic coinage during the fiscal year ended June 30, 1931. Master dies, hubs, and working dies were made for domestic, Philippine, Ecuador, Panama, Venezuela, and China coinage; and for the Post Office, War and Navy Departments, as well as for medals of a national character.

Chromium plating was applied to 316 coinage dies, collars, and other machine parts, and copper plating was applied to 63 medallions.

Dies manufactured

Laboratory, Bureau of the Mint

From the domestic coinage of the calendar year 1930 the assayer of this bureau examined and tested 20 gold coins and 164 silver coins, all of which were found within the legal requirements as to weight and fineness.

The following table summarizes results of fineness tests on domestic coins, the limit of tolerance being one one-thousandth above or below 900 for gold coins and three one-thousandths above or below 900 for silver coins.

Fineness (thousandths)	Gold coins, San Francisco	Silver coins		
		Philadelphia	San Francisco	Total
898.6		1	2	3
898.8		2	1	3
898.9		1	1	2
899.0		18	5	23
899.2		6	5	11
899.3		11	9	20
899.4		10	1	11

Assay Commission's Annual Test of Coin

Section 3547 of the Revised Statutes provides for an annual test of the domestic coinage executed during each calendar year, by a commission, of whom part are ex officio members, the others being appointed, without compensation, by the President. The purpose is "to secure a due conformity in the gold and silver coins to their respective standards of fineness and weight." The commission, which met at the Philadelphia Mint February 11 and 12, 1931, reported the following results of their examination of the 1930 coinage:

Your committee on counting reports that the packages containing the pieces reserved in accordance with section 3539 of the Revised Statutes by the mints at Philadelphia and San Francisco for the trial of coins were delivered to us by the superintendent at Philadelphia, and upon comparison with the transcripts kept by the Director of the Mint were found to be correct. The packages were then opened, the coins contained therein counted and found to agree with the number called for in each package.

The reserved coins were then delivered to the committees on assaying and weighing. In the reports of those committees will be found an account of the disposition of these coins.

The committee on assaying has completed the test assays on individual coins and mass melts representing the different denominations coined by the mints at San Francisco and Philadelphia, no gold or silver having been coined during the year at the mint in Denver.

No half eagles were made during the year, and the only gold coinage was executed at the mint in San Francisco.

According to the following table, showing the extreme variations found on individual coins and mass melts tested under the supervision of the committee the 1930 coinage of the several mints has been found safely within the legal allowance prescribed by law, which is one one-thousandth fineness for gold and three one-thousandths for silver coins.

Highest assays on gold coins: San Francisco	899. 9
Lowest assays on gold coins: San Francisco	899. 6
Highest assays on silver coins:	
Philadelphia	900. 2
San Francisco	901. 1
Lowest assays on silver coins:	
Philadelphia	898. 6
San Francisco	898. 4
Mass melts:	
Gold—San Francisco	899. 7
Silver—	
Philadelphia	899. 5
San Francisco	899. 1

The committee on weighing reports that in accordance with the rules adopted by the Assay Commission in 1930 the committee received from the committee on assaying the residues of the several parcels of reserved coins, and took therefrom at random from the parcels of each mint such a number of coins of each of the denominations represented and so distributed by dates of coinage as to be sufficient for the purposes of weighing. It was found possible to select one or more coins from substantially every one of the 103 parcels presented. The above procedure resulted in the selection of 295 pieces.

Each of these coins was weighed to an accuracy of 0.01 grain and the results recorded. The standards used were a set of sealed coin weights and a set of grain weights, delivered to the commission from the Bureau of Standards, Washington, D. C., under seal and accompanied by certificates signed by the director of the bureau. The weighings were made by the method of substitution on the balance belonging to the Philadelphia Mint regularly employed for this purpose. This balance was tested before the weighing of the coins was commenced and was found to be accurate and reliable and very well adapted for the work of the committee.

The weight of each coin is given in the table below. An examination of these results will demonstrate that each coin was well within the deviation allowed by law. Also the average weights of the coins of the several denominations were very close to the standards similarly established.

The deviations from standard of the heaviest and lightest coins encountered, of each denomination from each mint, are shown in the following table:

	Legal deviation allowed	Philadelphia		San Francisco		Denver	
		Heavy	Light	Heavy	Light	Heavy	Light
GOLD COINS	*Grains*	*Grains*	*Grains*	*Grains*	*Grains*	*Grains*	*Grains*
Double eagle	0.5			0.15	0.02

SILVER COINS							
Quarter dollar	1.5	1.15	1.11	1.09	1.03		
Dime	1.5	.44	.48	.53	.85		

The foregoing report, covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1931, is respectfully submitted.

R. J. GRANT,
Director of the Mint.

Hon. ANDREW W. MELLON,
Secretary of the Treasury.

PART II

REPORT OF THE DIRECTOR OF THE MINT ON THE PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1931

REPORT ON PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1930

INTRODUCTION

The official estimate of the production of gold and silver in the United States is made by the Bureau of the Mint with the cooperation of the Bureau of Mines, the latter making a mine canvass in each State and the former working backward from mint deposits through refineries, smelters, and other reduction works to the mine production estimate made by the former. The official estimate represents the material received at mint service offices and private refineries. The difference between this estimate and the mine production estimate is almost entirely due to the time element involved in the reducing processes, since differences for series of years are shown by comparison to practically offset each other. The two systems thus verify and support each other.

The gold production of the United States, including its insular dependencies, for the calendar year 1930 is estimated to have been $47,247,600, and the production of silver is estimated at 50,748,127 fine ounces. A comparison of these figures with those for 1929 indicates $1,596,000 increase in production of gold and approximately 10,600,000 ounces decrease in silver production.

As regards individual States, the outstanding differences in gold production as compared with the prior year are increases by South Dakota of over $1,900,000, by California of over $800,000, by the Philippine Islands of about $700,000, and by Alaska of about $700,000; and decreases by Arizona of nearly $1,300,000, and by Utah of about $600,000.

Individual States' material differences in silver production as compared with the prior year include increase of over 400,000 ounces by Colorado, and decreases of over 4,000,000 ounces in Montana, nearly 3,000,000 ounces in Arizona, nearly 3,400,000 ounces in Utah, and about 600,000 ounces each in Nevada and Texas.

A brief review of mining conditions, for which acknowledgments are made to the United States Bureau of Mines, follows; the production figures therein differ as explained above, from the Bureau of the Mint production estimates. Further information concerning same can be obtained by those interested by addressing the mines bureau at Washington.

ALASKA

Alaska mines in 1930 produced gold valued at $8,476,000 compared with an output of $7,761,000 in 1929.

In 1930 about 43 per cent of the total gold production came from lode mines, compared with 47 per cent in 1929 and 51 per cent in 1928.

The auriferous lode mines in 1930 produced gold valued at $3,639,000 compared with $3,644,000 in 1929.

The value of the placer gold produced in Alaska in 1930 was $4,837,000, compared with an output of $4,117,000 in 1929.

Twenty-seven gold dredges were operated in Alaska in 1930, three less than in 1929. The dredges in 1930 handled about 9,906,000 cubic yards of gravel and produced gold valued at $3,912,600, which was an increase of $980,600 over the output of thirty dredges in 1929. The total output of gold dredges in Alaska, including 1930, has been $42,920,600.

The silver production of Alaska in 1930 was 408,570 ounces, valued at $157,300. The auriferous lode mines yielded bullion which contained 102,080 ounces of silver, the copper ores treated contained 279,990 ounces, and bullion from placer mines yielded 26,500 ounces of silver.

In 1930 there was an increase in the output of gold and a decrease in that of silver. The decrease in silver was due to the low prices that prevailed for metals, which discouraged large outputs and the undertaking of new enterprises. The world-wide stagnation of business and the accompanying depression seemed to have been felt less in Alaska than in most places and the record of a decrease of less than 15 per cent in the value of the mineral output of Alaska compares favorably with similar enterprises in the States. Each year brings more general development of mineral resources in the Territory.

ARIZONA

Arizona produced gold in 1930 valued at $3,501,610, a decrease of $680,677 from that of 1929, according to C. N. Gerry, of the United States Bureau of Mines. The marked change was due to the large decrease in the output of copper ore, which supplies most of the gold in Arizona. The larger part of the gold, or $2,124,344, had its source in crude ore smelted, representing a decrease of $883,951 in gold from that source in 1929. Gold in bullion from ore treated by amalgamation was valued at $11,256 and that treated by cyanidation at $593,008, or a total of $604,264, which increased $462,104 over that of 1929; gold in concentrate was valued at $752,939, a decrease of $256,196. The gold from lode mines was derived from the following sources: Copper ore, $2,730,476; dry or siliceous ore, chiefly gold ore, $692,164; lead-zinc ore, $32,777; lead ore, $25,698; and copper-lead ore, $7,438. Gold from siliceous gold ore, chiefly from Mohave County, was more than double that of 1929, as a result of the unusually large increase in the output of gold ore from the Tom Reed mine at Oatman. More than 78 per cent of the State's gold came from copper ore and most of the remainder came from gold ore; placers produced $13,057 in gold, an increase of $7,405 over 1929. No dredges were operated. The largest producers of gold were the United Verde, Tom Reed, Calumet & Arizona, Copper Queen, New Cornelia, United Verde Extension, and Magma mines.

The silver output amounted to 5,540,732 ounces, a decreaseof 2,002,-551 ounces from the output of 1929. Most of the silver in Arizona is recovered from copper ore, and as there was a decided decrease in the output of copper ore in 1930 there was a corresponding decrease in the output of silver. The sources of the silver output were: Copper ore, 4,968,973 ounces; siliceous ore, 186,202 ounces; lead ore, 222,541 ounces; lead-zinc ore, 142,440 ounces; copper-lead ore, 20,491 ounces; and placers, 85 ounces. Most of the silver, or 3,927,374 ounces, was recovered from crude ore smelted, while most of the remainder, or 1,572,253 ounces, was recovered from concentrates smelted. The

largest silver producers were the United Verde, Calumet & Arizona, Magma, Copper Queen, and United Verde Extension mines.

There were 342 mines producing during the year, of which number 41 only were placer mines.

CALIFORNIA

Gold.—The total production of gold from California mines for the period 1848 to 1930, inclusive, is recorded as $1,841,540,225, of which $1,234,541,154 was from placer mines. In 1930 the lode mines of California produced $5,696,019 (an increase of $1,039,923), of which gold quartz yielded 60 per cent and the placers $3,755,143 (a decrease of $115,464). Of the placer production, $3,451,801 was recovered by dredging. The total dredge production from 1896 to the end of 1930 was $167,005,744, and the output from dredges in 1930 was slightly over 36 per cent of the gold production of the State in 1930, $9,451,142. The nine Sacramento County dredges made the largest output, $1,722,018, and increased their yield $240,424 over 1929. Six dredges in Yuba County made an output of $949,001 and decreased their yield $492,649 compared with 1929. One dredge in Amador County made an output of over $150,000 and three dredges in Trinity County made an output of more than $250,000. Dredges were also operated in Butte, Calaveras, Merced, Shasta, and Stanislaus Counties.

Three of the 34 counties reporting mine production of gold had a yield of more than $1,000,000 each in 1930. Of these Nevada County produced gold mainly from siliceous ore of the Grass Valley district; and Amador County, second in rank, is on the Mother Lode; Sacramento, third in rank, obtained most of its gold by dredging. The five mother lode counties—Amador, Calaveras, Eldorado, Mariposa, and Tuolumne—whose output is mainly gold milling ore, in 1930 produced $1,536,760 in gold from mill bullion and $358,299 from concentrates derived from gold ore, compared with $1,428,313 in gold from mill bullion and $307,531 in gold from concentrates in 1929.

Silver.—The total output of silver from California mines for the period 1848 to 1930, inclusive, is recorded as 84,536,750 fine ounces, valued at $70,889,636. Of the silver output in 1930, 1,622,803 fine ounces, siliceous ore yielded 823,000 ounces; copper ore, 471,212 ounces; lead ore, 116,779 ounces; copper-lead ore, 199,186 ounces; and placer bullion, 12,626 ounces. The only counties producing more than 100,000 ounces in 1930 were San Bernardino, Plumas, Napa, Contra Costa, and Inyo. Over 58 per cent of the silver was recovered from ore sent to concentrating plants.

CENTRAL STATES

The total mine production of silver in the Central States in 1930 was 179,827 ounces, valued at $69,234, which was 26,306 ounces less than the output in 1929. All the silver from Michigan, 7,820 ounces, was derived from lode copper mines. None was reported from the refining of copper bullion, the output being composed entirely of lumps of native silver.

The mine production of silver from Missouri decreased from 181,638 ounces in 1929 to 170,210 ounces in 1930. As no copper ore was shipped in 1930, all of the silver was derived from lead ore mined

in southeastern Missouri. Only 210 ounces was derived from copper-lead matte and only a small quantity from lead skimmings. The big source of silver from Missouri mines was from the residues of zinc concentrates derived from lead ore treated by the St. Joseph Lead Co.

The silver credited to Illinois in 1930 was from galena concentrates made at fluorspar mines in southern Illinois. These concentrates are treated mainly by the St. Louis Smelting & Refining Co. As the quantity of galena shipped decreased, the recovery of silver decreased from 3,700 ounces in 1929 to 1,797 ounces in 1930.

COLORADO

Colorado mines produced $4,516,000 in gold in 1930, as compared with $4,417,358 in 1929, according to Charles W. Henderson, of the United States Bureau of Mines. The siliceous sulphotelluride gold ores of the Cripple Creek district yielded in recovered amalgam and cyanidation bullion, $2,500,000 as compared with $2,640,000 in 1929. Other important gold-producing counties were San Juan, $658,000; Park, $494,000; Ouray, $148,000; Summit, $148,000; Eagle, $127,000; Gilpin, $127,000; Clear Creek, $106,000; and Lake, $79,000.

The silver produced amounted to 4,290,000 ounces, as compared with 4,397,000 ounces in 1929. Eagle County produced 1,541,000 ounces and San Juan County 1,085,000 ounces. Other important silver-producing counties were: Lake, 617,000 ounces; Mineral, 405,000; Saguache, 328,000; San Miguel, 82,000; Dolores, 64,000; Pitkin, 56,000; and Clear Creek, 36,000.

The total production of Colorado from 1858 to 1930 has been: Gold, $715,477,609; silver, 657,839,654 ounces.

EASTERN OR APPALACHIAN STATES

The mine production of gold in the Eastern or Appalachian States increased from 1,779.86 fine ounces, valued at $36,793 in 1929, to 2,266.06 fine ounces, valued at $46,637 in 1920. Tennessee produced $14,388; Pennsylvania, $13,023; North Carolina, $14,582; Georgia, $4,194; and Alabama, $450.

The placer mines (seven in number) yielded $1,686, of which $450 was from Alabama, $242 from Georgia, and $994 from North Carolina. None of the placer mines yielded more than $500.

Siliceous gold ore in Georgia and North Carolina amounting to 900 tons yielded $6,740 in gold. The copper ore and copper concentrates from pyritiferous magnetite ore yielded $38,211 in gold, of which $10,800 was from North Carolina, $13,023 from Pennsylvania, and $14,388 from Tennessee. The gold recovered from base ores in 1930 was about seven times as much as that derived from placers and lode gold ore. None of the zinc or lead-zinc ores mined contained any recoverable gold.

The mine output of silver was 123,590 ounces, or 11,930 ounces more than in 1929. Only 10 ounces was derived from placer bullion and 70 ounces from lode gold ore. Copper ores yielded 117,748 ounces, of which Tennessee was credited with 83,640 ounces, North Carolina with 30,000 ounces, and Vermont with 4,108 ounces. The silver from Pennsylvania (5,762 ounces) came from the pyritiferous magnetite ore of the Cornwall mine in Lebanon County.

IDAHO

In 1930, according to C. N. Gerry, of the United States Bureau of Mines, Idaho's output of gold was valued at $443,309 and that of silver, $3,626,946. There was an increase of $24,764 in the production of gold and an increase of 6,236 ounces in the production of silver over that of 1929; the value of the silver output, however, decreased $1,390,931 on account of the decline in the average price of the metal.

Gold increased from $418,545 in 1929 to $443,309 in 1930, as a result of the increased output of gold from the Talache (Gold Hill & Iowa) mine at Quartzburg, the large output of gold from the Sherman Howe property, a new producer near Burgdorf, and the increased output of gold from the dredge at Centerville, Boise County. The output of gold from the Idawa property at Placerville was much less than that in 1929 and the mine dropped to second place among Idaho gold producers. Of the total gold output ($443,309) the placer gold amounted to $82,428, against $85,373 in 1929; the gold won by three dredges was valued at $68,527, an increase from $60,143 in 1929. The Idaho Gold Dredging Corporation at Centerville, the largest producer of gold in Idaho from dredging operations, increased its output 34 per cent.

Dry or siliceous ore, chiefly gold ore, produced more gold than any other kind of ore, or $294,424; gold in lead-zinc ore was valued at $27,508; lead ore, $22,197; and copper ore, $16,752. In 1930 more than 66 per cent of Idaho's gold came from siliceous gold ore. The largest producers of gold were the Talache (Gold Hill & Iowa) mine at Quartzburg, the Idawa Gold Mining Co. at Placerville, the Sherman Howe mine at Burgdorf, the Idaho Gold Dredging Corporation at Centerville, the Lost Pilgrim & Hall-Interstate group east of Cascade, and the Mackay Metals (Inc.) at Mackay.

The silver output was 9,420,639 ounces, an increase of 6,236 ounces. In 1930 Idaho not only became the second largest producer of silver in the United States, but increased its output in a year when the output from other Western States was distinctly decreased. The Sunshine Mining Co. operated the Yankee Boy mine east of Kellogg in Shoshone County, increased its output of silver considerably, and became the largest producer of silver in Idaho. Lead ore supplied 4,462,368 ounces; copper-lead ore, 2,635,993 ounces; lead-zinc ore, 2,258,124 ounces; siliceous ore, 35,737 ounces; copper ore, 26,262 ounces; zinc ore, 800 ounces; and placers, 1,355 ounces. The Coeur d'Alene region (Shoshone County) alone produced 8,831,461 ounces of silver, an increase of 54,735 ounces over that of 1929. The largest producers of silver were the Sunshine, Bunker Hill & Sullivan, Hecla, and Morning mines, all in the Coeur d'Alene region.

There were 192 mines producing during the year, of which 61 were placer mines and 131 lode mines.

MONTANA

Montana's mine output of gold in 1930, according to C. N. Gerry of the United States Bureau of Mines, was valued at $899,001, a decrease of $232,948 from that of 1929, and less than the average annual output for the decade 1921 to 1930, which was $1,420,822. Of the total output, $884,102 came from lode mines and $14,899 from placers. There was a decided decrease of $235,513 in gold

from lode mines, due chiefly to the lessened output of the Anaconda group at Butte. A marked improvement of nearly 49 per cent in quantity was made, however, in the output of gold from the Spring Hill mine near Helena, and the mine became the largest producer of gold in Montana. No dredges were operated and the output of placer gold was $2,565 more than that of 1929. In recent years most of the gold was recovered from copper ore, but in 1930 the drop in the price of copper resulted in a decided decrease in the output of gold from copper ore, and the general decrease in metal prices, except gold, resulted in a substantial increase in the output of gold from siliceous ore. Copper ore was the source of $448,903 in gold; siliceous ore, nearly all gold ore, $366,974; lead-zinc ore, $44,529; lead ore, $16,301; zinc ore, $7,234; copper-lead ore, $161; and placers, $14,899. More than 79 per cent of the gold was produced by the Spring Hill mine south of Helena, the Anaconda group of mines at Butte, and the Liberty-Montana mine near Jefferson Island.

The output of silver decreased decidedly, from 12,716,977 ounces in 1929 to 7,052,889 ounces in 1930, the smallest output except that of 1921 in the last 30 years. Nearly 75 per cent of the total silver was recovered from the mines at Butte. The output of silver from copper ore, the chief source of silver in Montana, decreased considerably from 7,289,007 ounces in 1929 to 4,583,827 ounces in 1930. There were also unusually large decreases in the output of silver from zinc ore, lead-zinc ore, and siliceous ore. Copper ore supplied the largest quantity of silver, 4,583,827 ounces; lead-zinc ore, 1,261,859 ounces; siliceous ore, chiefly silver ore, 657,439 ounces; zinc ore, 449,183 ounces; lead ore, 91,635 ounces; and copper-lead ore, 8,860 ounces. More than 82 per cent of the silver was produced from the Anaconda group of mines at Butte, the Block P property of the St. Joseph Lead Co. near Hughesville, the Flathead mine of the Anaconda Copper Mining Co. near Kila, and the Butte & Superior property at Butte. There were 266 producing mines, of which 193 were lode mines and 73 placer properties.

NEVADA

The gold output of Nevada in 1930, according to Victor C. Heikes, of the United States Bureau of Mines, was valued at $3,081,436, a decrease of $302,775 compared with $3,384,211 in 1929. The Robinson (Ely) district, credited with $1,041,668, exceeded all other districts in the State in gold output, chiefly on account of the production of copper ore from the mines at Ely, but decreased $279,972 in the value of the gold compared with 1929. The value of the gold output from the Jarbidge district in 1930 was $460,032, a decrease of $121,709 compared with 1929, followed by the Tonopah district with $406,306 and the Goldfield district producing $297,732. The Seven Troughs, Round Mountain, Manhattan, and Comstock districts produced $551,049 in gold compared with $286,042 in 1929, when the Seven Troughs had not yet started on a production basis. The largest producers of gold were the Nevada Consolidated Copper Co., Elkoro Mines Co., Tonopah Extension Mines (Inc.), Bradshaw (Inc.), leasing the Goldfield Consolidated tailings dump, the Consolidated Coppermines, and the Seven Troughs Gold Mines Co. These six companies produced nearly 74 per cent of the total gold yield in Nevada in 1930. Siliceous

ore in 1930 yielded gold valued at $1,923,132; copper ore supplied gold valued at $1,035,327; lead ore, $21,456 copper-lead ore, $7,928; lead-zinc ore, $55,155; and placers, $38,438.

The mine production of silver in 1930 was 4,219,832 ounces, a decrease of 703,694 ounces compared with 1929. The mines of the Tonopah district in Nye and Esmeralda Counties produced 1,931,194 ounces, a decrease from 1,965,595 ounces in 1929. The output of silver from ore mined in the western part of the district in Esmeralda County in 1930 increased 793,540 ounces, but that mined in the eastern part of the district in Nye County decreased 827,941 ounces compared with 1929. The Comstock district, Storey County, decreased its output of silver from 32,399 ounces in 1929 to 25,296 ounces in 1930. More than 58 per cent of the silver yield of the State, 2,478,009 ounces, came from dry siliceous ore, the greater part of which (2,232,481 ounces) was recovered by cyanidation. Silver from lead ore amounted to 148,033 ounces; lead-zinc ore, 1,063,639 ounces; copper-lead ore, 258,792 ounces; copper ore, 270,512 ounces; and placers, 847 ounces. The largest silver producer was the Tonopah Extension Mines (Inc.), followed by the Treadwell Yukon Co. Next in rank were the Combined Metals, Bristol Silver, Tonopah Belmont, Tonopah Mining, and Elkoro Mines Co.

There were 280 mines producing in Nevada in 1930, of which 33 were placer mines and 247 were lode mines. The total gold production of Nevada for the period 1904 to 1930, inclusive, is recorded as $212,292,913; of silver, 250,216,682 ounces.

NEW MEXICO

According to Charles W. Henderson, of the United States Bureau of Mines, gold produced in New Mexico in 1930 was approximately $652,000; silver was 1,091,000 ounces. Copper and lead-zinc ores yielded over 90 per cent of both the gold and silver production. Copper is the metal of chief value produced in New Mexico. In 1930 refined copper production had a gross calculated value of $8,406,000; refined zinc production was valued at $3,209,000; refined lead, $1,085,000.

The Pecos mine, at Tererro, on Willow Creek, a tributary of the Pecos River, continued as the largest producer of gold, of silver, of lead, and of zinc. Zinc-lead mines at Hanover contributed much silver but little gold. Zinc-lead mines, therefore, contributed about 50 per cent of the gold and 65 per cent of the silver. The siliceous gold-silver-copper ore of the Lordsburg district, Hidalgo County, and the copper concentrates of the Chino mines of the Nevada Consolidated Copper Co., contributed about one-half of the State's gold production and about 25 per cent of the silver.

OREGON

The gold yield from ore and gravels treated in Oregon in 1930, according to Victor C. Heikes, of the United States Bureau of Mines, was valued at $297,702, of which 47 lode operations yielded $83,283 and 143 placer operations $214,419. Compared with the gold yield in 1929, this was a decrease of $55,621, or 16 per cent. Four dredges were in operation in 1930 in Baker, Grant, and Jackson Counties and yielded slightly over 58 per cent of the total gold output of the State.

In order of output the leading gold-producing counties were Jackson, Grant, Josephine, and Baker; these counties produced over 97 per cent of the total gold in 1930. Dry gold ore and tailings yielded 27 per cent; copper ore, 1 per cent; dredges, hydraulic mines, and surface placers, 71 per cent of the total gold output of Oregon in 1930. A small amount of gold ($2,065) came from drift placers.

The production of silver in Oregon was 9,000 ounces, valued at $3,465, a decrease of 21,009 ounces in quantity and $12,530 in value compared with 1929. Lode mines yielded 7,421 ounces and placer mining 1,579 ounces. Gold ores yielded 67 per cent, placer mines 17 per cent, and copper ores 12 per cent of the total silver output of Oregon in 1930. No silver ore was treated for silver alone.

SOUTH DAKOTA

In 1930, according to Charles W. Henderson, of the United States Bureau of Mines, the Homestake gold mine, at Lead, S. Dak., mined 1,364,456 tons, and yielded gold-silver bullion, the proceeds of which were $8,426,195; the dividends paid were $2,009,280. The ore is first treated by amalgamation; sands and slimes are then treated by cyanidation. From 1875 to 1930 this mine has yielded gold-silver bullion and concentrates valued at $234,547,323 and paid in dividends $57,868,684. At the end of 1930 there were 14,981,911 tons of ore blocked out and remaining in the mine. Other production in 1930 was cyanide bullion produced in the 100-ton cyanidation mill at the Bullion-Columbia mine, at Keystone, between January 1 and January 8, when a fire destroyed part of the mill; operations were not resumed during the remainder of the year. Banks and bullion buyers in South Dakota in 1930 bought placer bullion containing 47 ounces of gold and 3 ounces of silver.

TEXAS

Metal mines in Texas, according to Charles W. Henderson, United States Bureau of Mines, produced in 1930, in terms of recovered and recoverable metals, 389,239 ounces of silver and $3,648 in gold. Cyanide precipitates and lead concentrates produced at the Presidio mine, at Shafter, contained only 365,439 fine ounces of silver and 176 ounces of gold, as compared to 974,049 fine ounces of silver and 1,279 ounces of gold in 1929. Because of the continued low price of silver in 1930, the Presidio mine closed June 30. The World Exploration Co., which in 1928 had reopened the Hazel mine, near Van Horn, placed its new 100-ton flotation mill in operation on May 1, 1930, and ran it at about one-third capacity until October 1, producing several hundred tons of copper-silver concentrates. Several hundred tons of copper-silver ore was shipped from Allamoore to the El Paso smelter.

The total output of gold from Texas mines from the first year of available Government production records—1885, to 1930, inclusive—mostly from the Presidio mine, has been $95,073, and for silver 22,772,112 ounces.

UTAH

The value of the metal output of Utah was $48,653,464 in 1930, a decrease of $47,331,737 from that of 1929, according to C. N. Gerry, of the United States Bureau of Mines. This unusual decline in value

was due chiefly to the large decrease in the output of copper ore, resulting from the marked drop in the price of the metal. There were also large decreases in the output of lead-zince ore and lead ore, but the output of siliceous gold ore was more than double that of 1929.

The gold output was valued at $4,309,148, a decrease of $660,767 from that of 1929, but it was much more than the average annual output for the decade 1921 to 1930, which was $3,530,647. Separated as to source, copper ore was most important, containing gold valued at $1,673,453; siliceous ore, chiefly gold ore, supplied $1,431,589 in gold; lead-zinc ore, $745,665; lead ore, $406,413; and copper-lead ore, $52,028; no placer gold was reported from Utah in 1930. One of the interesting features of the year was the large quantity of gold produced from siliceous gold ore from the Eureka Standard mine in the Tintic district. Crude ore of smelting grade yielded $1,948,294 in gold, ore of concentrating grade yielded $2,287,344, and miscellaneous material, chiefly old tailings smelted, yielded $73,510. The five largest producers of gold were the Utah Copper, Eureka Standard, United States Smelting, Refining & Mining, North Lily, and Park Utah Consolidated companies.

The silver production in Utah decreased decidedly from an output of 17,592,396 ounces in 1929 to 13,129,421 ounces in 1930. The State, however, maintained its position as the largest producer of silver in the United States. The output in 1930 was much less than the average annual output for the decade 1921 to 1930, which was 17,295,115 ounces. Separated as to source, the silver came principally from lead-zinc ore, which supplied 6,479,433 ounces, and from lead ore, which supplied 3,362,487 ounces; dry or siliceous ore supplied 2,215,920 ounces; copper ore, 944,113 ounces; and copper-lead ore, 127,468 ounces. First-class crude ore yielded 4,671,750 ounces of silver, ore concentrated yielded 8,193,168 ounces, and miscellaneous material, nearly all old tailings smelted, yielded 264,503 ounces. The Tintic district, in Juab and Utah Counties, produced 4,834,829 ounces, against 6,272,456 ounces in 1929. The Bingham district of Salt Lake County produced 3,517,117 ounces, against 4,644,955 ounces in 1929, and the Park City region, in Summit and Wasatch Counties, 4,212,403 ounces, against 6,157,501 ounces in 1929. The five largest producers of silver were the Tintic Standard, Silver King Coalition, United States Smelting, Refining & Mining, Park Utah Consolidated, and Utah Copper companies.

There were 103 lode mines producing in 1930; no placer production was reported.

WASHINGTON

The output of gold in Washington in 1930, according to C. N. Gerry, of the United States Bureau of Mines, had a value of $87,748, an increase of $10,850 from that of 1929. Most of the gold of the State, or $81,719, came from siliceous gold ore; copper ore supplied $2,076 in gold; lead ore, $7; and placers, $3,946. Except for lessees' operations, the gold mines at Republic were idle, as they have been for two years. The output, however, of the Boundary Red Mountain mine in Whatcom County was about 30 per cent more than that in 1929. Crude ore supplied $10,148 in gold, ore treated by amalgamation $71,515, and concentrates $1,911. Since 1860 Washington has produced $30,422,745 in gold. The only mine in Washington that

was worthy of note as a producer of gold in 1930 was the Boundary Red Mountain property in Whatcom County.

The output of silver was 32,816 ounces, the smallest output in the last 30 years, due to the continued idleness of the large producers at Republic. Of the total silver, 27,592 ounces had its source in copper ore, 2,435 ounces in lead ore, 1,726 ounces in siliceous ore, 1,020 ounces in lead-zinc ore, and 43 ounces in placer dust and bullion. Crude ore supplied most of the silver, or 20,580 ounces; concentrates, 11,983 ounces; and ore treated by amalgamation, 173 ounces. The two largest producers of silver were the United Copper mine near Chewelah, Stevens County, and the Sunset mine near Index, Snohomish County. There were 24 lode mines and 14 placers producing in 1930.

WYOMING

Metal mines in Wyoming in 1930, according to Charles W. Henderson, of the United States Bureau of Mines, yielded 443 ounces of gold and 120 ounces of silver, chiefly from the Atlantic City district, Fremont County.

Refinery production of gold mined in the several States and Territories in 1929 and 1930, with the increase and decrease in each for the latter year

State or Territory	Production [1]			Increase, 1930	Decrease, 1930
	1930		1929		
	Ounces [2]	Value	Value	Value	Value
Alaska	407,356	$8,420,800	$7,745,100	$675,700

Wyoming	437		6	98		27,592
						22
Total [3]	1,697,726	374,337	65,776	8,421,750	25,749,675	13,445,294

[1] Includes small quantity of silver from placer mines (less than 50,000 ounces).
[2] Includes silver in lead, silver-lead, lead-zinc, copper-lead, copper-lead-zinc, and zinc ores.
[3] Philippine Islands not included. (They report 110,270 ounces silver from lode mines and 8 ounces from placers; $3,696,573 gold from lode mines and $8,227 from placers.)

Production of gold and silver in the United States since 1792

[The estimate for 1792–1873 is by R. W. Raymond, commissioner of mining statistics, and since by Director of the Mint]

Calendar years	Gold		Silver	
	Fine ounces	Value	Fine ounces	Commercial value
1792 to July 31, 1834	677,250	$14,000,000	Insignificant.

Gold and Silver Used in Industrial Arts in the United States During the Calendar Year 1930

Among the purveyors of gold and silver bars for use in the industrial arts of the United States, the United States assay office at New York and the mint at Philadelphia hold the foremost places; consequently the larger portion of the material consumed in the arts is brought under Government notice and is a matter of public record.

The following table gives the value of the gold and the quantity of the silver bars issued by the Government institutions and private refineries during the calendar year 1930, with the classes of material from which they were made:

Gold and silver issued for use in the industrial arts during the calendar year 1930 [1]

Item	Issued by—	Gold	Silver
		Value	*Fine ounces*
Bullion	Mints and assay offices	$34,920,772	515,148
Bullion in various forms	Private refineries and dealers	6,759,607	35,750,715
United States coin [2]	Banks, etc.	1,000,000	77,344
Total		42,689,379	36,343,207
Old jewelry, plate, scrap, etc., contained in private refineries' and dealers' returns, and that returned to monetary use		27,511,640	9,468,829
New material		15,177,739	26,874,378

[1] For explanation of calculation, see p. 62.
[2] Estimated; the quantity of silver is equal to 100,000 silver dollars.

Gold furnished for use in manufactures and the arts, and classification of the materials used, since 1880

Calendar year	New material			Old material	Grand total
	United States coin	Domestic and foreign bullion and foreign coins	Total		
1880	$3,300,000	$5,511,047	$8,811,047	$1,294,385	$10,105,432

ADDENDA TO REPORT OF THE DIRECTOR OF THE MINT

78428—31——5

Bases used for Mint Service Statistics

Gold and silver, as well as minor coinage metals, are accounted for by quantity as well as by value. Most of the published mint service statistics pertaining to such metals are on a primary quantity basis rather than a primary value basis because, in some degree, the value factor antedates the quantity factor, as when advance partial payments are made on large deposits of bullion or foreign coin pending determination by melt, assay, and computation, of the exact quantities and values of the materials deposited. The *quantity basis* comprises received bullion, the quantity and value whereof have been finally determined, whether or not paid for; also melted coin that has been reviewed and classified after having been received as withdrawn from monetary use. The *value basis* comprises received bullion, the quantity and value whereof have been finally determined, whether or not paid for; also received bullion to the value of advance payments thereon prior to making final determinations; and received but unreviewed coin that has been withdrawn from monetary use. To effect reconciliation between the quantity basis and value basis, from period to period, would require consideration also of prior period advances.

The tabulations of "Deposits and purchases" include received metal for which payment is made in bars bearing the Government stamp, as well as that paid for by check or in cash. In these tabulations the receipt classification item of "Domestic refinery bullion" includes that refined from new production of both domestic and foreign mines, also old or secondary source metals, with inconsiderable amounts from small refineries that work only old materials.

Gold and silver production estimates.—These estimates consist of arrivals at United States mints and assay offices and at privately owned refineries (bullion producing plants), of gold and silver from mines within the States and Territories of the United States, including the production of the Philippine Islands which comes to the United States for reduction. The portion of this figure representing mint receipts is on the quantity basis.

Gold and silver consumption in industry.—These estimates comprise bar sales by the mints and assay offices for industrial use (partly estimated) plus similar items issued by private refiners, dealers (and manufacturers), as reported to the mint bureau, plus an estimate of domestic coin melted for industrial use; from the total of these is deducted the old jewelry, plate, scrap, etc., received by the same concerns, giving net new materials consumed.

Stock of domestic coin.—Consists of an estimate made in 1873 of gold and silver coin, the former of which was revised in 1907, with annual addition of new coinage and reported imports, and deduction of withdrawn coin, reported exports, and an estimate for industrial

use; since 1928 the additional factor of gold coin "earmarked" or set aside for foreign owners, has been considered, such transactions being equivalent to exports and releases thereof being equivalent to imports. In 1928 minor coin was added, using only the 5-cent nickel and 1-cent bronze coins of the type commonly in circulation and considering only the amounts coined and those withdrawn for recoinage. The monetary stock tables for a series of years have been revised back to the establishing of the Federal reserve system (1914) to include earmarked gold, and to include minor coin back to 1900. The item of coin withdrawn as used in the stock compilation will hereafter include the coin received for recoinage but not yet reviewed, which is subject to classification adjustments.

Domestic coin made.—These data cover the coin delivered from the manufacturing department to the issuing (cash) division, and include the new coin made from withdrawn old coin, as well as all other newly made coin. It is now required that all coins be delivered to the cash division during the year impressed on such coins; during the earlier years this was not always done.

Losses and Gains on Withdrawn Coin

The loss on face value of gold coin totaling $3,384,365 withdrawn from circulation during the fiscal year 1931 was $25,635.48, of which $4,872.95 was reimbursable from the appropriation provided for that purpose. The loss on face value of silver coin totaling $5,487,495.67 withdrawn from circulation was $489,817.13, all being reimbursable from the appropriation provided. The reimbursable loss, provided for by appropriation, on minor coin totaling $364,110.44 withdrawn during the fiscal year was $19,962.57.

Standard silver dollars (mutilated) purchased as bullion for use in the manufacture of subsidiary silver coin, since 1883

[2] Discontinued by act of Sept. 26, 1890.
[12] Discontinued by act of Feb. 12, 1873.
[13] Composed of 75 cer pent copper and 25 per cent nickel.
[14] Composed of 95 per cent copper and 5 per cent tin and zinc.
[15] All copper.
[16] Proclamation of the President in conformity with act of Mar. 3, 1795.
[17] Discontinued by act of Feb. 21, 1857.
[18] Discontinued by act of Apr. 22, 1864.
[19] Composed of 88 per cent copper and 12 per cent nickel.

Coinage of each mint, by value, with grand total pieces, since organization to close of business December 31, 1930

[1] Louisiana Purchase Exposition.
[2] Lewis and Clark Exposition.
[3] Panama–Pacific International Exposition coins (octagonal, $75,450; round, $75,500).
[4] Includes $25,042.50 Panama-Pacific International Exposition coins.
[5] McKinley memorial coins.
[6] Grant memorial coins.
[7] Includes $500,565 National Sesquicentennial of Signing Declaration of Independence.

NOTE.—Coinage during the early years not susceptible of exact statement by years of actual date on coin, the registry of annual coinage being of coin delivered by the coining departments of mints within the given year, and these deliveries not having been invariably completed within the year of the date of coin, as now required.

Combined silver coinage[1] of the mints of the United States, by denominations and calendar years, since their organization

[1] The amount of money held in trust against gold and silver certificates and Treasury notes of 1890 should be deducted from this total before combining it with total money outside of the Treasury to arrive at the stock of money in the United States.

[2] This total includes $30,166,138 gold deposited for the redemption of Federal reserve notes ($1,139,730 in process of redemption), $29,415,523 lawful money deposited for the redemption of National bank notes ($17,839,975 in process of redemption, including notes chargeable to the retirement fund), $1,350 lawful money deposited for the retirement of additional circulation (act of May 30, 1908), and $11,826,948 lawful money deposited as a reserve for postal savings deposits.

[3] Includes money held by the Cuban agency of the Federal Reserve Bank of Atlanta.

[4] Includes any paper currency held outside the continental limits of the United States.

[5] Population of continental United States (estimated) June 30, 1931, 124,076,000; June 30, 1930, 123,191,000; Oct. 31, 1920, 107,006,005; Mar. 31, 1917; 103,716,000; June 30, 1914, 99,027,000; Jan. 1, 1879, 48,231,000.

[6] Does not include gold bullion or foreign coin other than that held by the Treasury. Federal reserve banks, and Federal reserve agents. Gold held by Federal reserve banks under earmark for foreign account is excluded, and gold held abroad for Federal reserve banks is included.

[7] These amounts are not included in the total since the money held in trust against gold and silver certificates and Treasury notes of 1890 is included under gold coin and bullion and standard silver dollars, respectively.

NOTE.—Gold certificates are secured dollar for dollar by gold held in the Treasury for their redemption; silver certificates are secured dollar for dollar by standard silver dollars held in the Treasury for their redemption; United States notes are secured by a gold reserve of $156,039,088 held in the Treasury. This reserve fund may also be used for the redemption of Treasury notes of 1890, which are also secured dollar for dollar by standard silver dollars held in the Treasury; these notes are being canceled and retired on receipt. Federal reserve notes are obligations of the United States and a first lien on all the assets of the issuing Federal reserve bank. Federal reserve notes are secured by the deposit with Federal reserve agents of a like amount of gold or of gold and such discounted or purchased paper as is eligible under the terms of the Federal reserve act. Federal reserve banks must maintain a gold reserve of at least 40 per cent, including the gold redemption fund which must be deposited with the United States Treasurer, against Federal reserve notes in actual circulation. Lawful money has been deposited with the United States Treasurer, against Federal States for retirement of all outstanding Federal reserve bank notes. National bank notes are secured by United States bonds except where lawful money has been deposited with the Treasurer of the United for their retirement. A 5 per cent fund is also maintained in lawful money with the Treasurer of the United States for the redemption of National bank notes secured by Government bonds.

Estimated monetary stock of gold and silver in the United States and the amount per capita at the close of each fiscal year since 1873

[1] No information available.

year have shown an increase of £1,665,538, when compared with the return issued at the commencement of 1930.

A feature of the past year has been the entire absence, so far as London is concerned, of any movements of gold either to or from New York.

Owing to the heavy drain of gold from London during 1929, the reserves of the metal held by the central institution had become much reduced. The return issued on the 1st of January, 1930, showed that the stocks amounted to £145,960,084, representing a net efflux of £7,946,231 since the return to gold standard became effective in April, 1925.

In spite of a moderate demand in January from France and later in the month from Germany, the Bank of England was able to secure a part of the open-market gold, in addition to substantial amounts of sovereigns from South America, South Africa, and Australia, with the result that the reserves increased to slightly over £150,000,000 (the theoretical minimum laid down by the Cunliffe Committee), for the first time since July, 1929. Earmarking operations to the extent of rather more than £1,000,000, which were believed to be on account of the Argentine against the issue of notes in that country, took place towards the end of the month.

Although the depreciation of the franc in terms of sterling rendered unprofitable further shipments to that quarter, the weakening in the London-Berlin rate enabled Germany to continue to bid for and to secure the greater part of the weekly arrivals of gold throughout February, which were augmented by the sale of some £3,000,000 gold on account of Spain. The total amount received from this quarter at that time amounted to £4,000,000, of which £1,000,000 was secured by the Bank of England direct.

During March and April the adverse trend of certain foreign exchanges induced competition for the open-market gold, and in addition to a continued demand from Germany, purchases were also made for account of Switzerland and Belgium.

The importation of further substantial amounts of sovereigns, together with the release of £1,000,000 previously set aside, further increased the stocks of the metal in London, during this period, to slightly over £163,000,000, representing a net influx of rather more than £18,000,000 since the commencement of the year. This proved to be the highest point reached and it is interesting to note that the Bank of England simultaneously reduced the bank rate to 3 per cent, where it has remained ever since.

With the exception of two comparatively unimportant amounts, no withdrawals were made from the bank during the first four months of the year, the continental demand being supplied by purchases in the open market.

May witnessed a renewal of the French demand for gold, which was believed to be chiefly due to preparations for the issue of the French allotment of shares in the bank for international settlements. Owing to competition from Germany and Belgium, the requirements for Paris were largely satisfied by substantial withdrawals from the Bank of England.

Further quantities of sovereigns continued to arrive, but the increased continental demand encroached upon the reserves of the metal in London, which began to depreciate substantially.

With the cessation of the exports to Germany and Belgium during the early days of June, France was able to secure the greater part of the weekly arrivals for the remainder of the month and also during July. In addition, substantial amounts of gold were withdrawn from the Bank of England for shipment to Paris, to which center large consignments of the metal were also made from New York during the latter part of July.

In the middle of June a somewhat interesting position was created by the decision of the Bank of England to issue bar gold of the fineness of 0.9166 only instead of the customary bars assaying approximately 0.9950. Under the gold standard act of 1925 the central institution is under no obligation to sell gold of any specific fineness. As the stock of fine bars had become very much depleted and had been replaced to a large extent by the importation of sovereigns, it was decided to conserve the former and only to deliver bars manufactured from melted sovereigns. The Bank of France will not accept as good delivery gold of a lower fineness than 0.9950, and it was therefore necessary that all bars withdrawn from the Bank of England for that destination should be refined. The immediate result was the temporary alteration in the London-Paris gold export point commensurate with the cost of refining the bars in London.

The withdrawals from the bank for Paris from now onwards being limited to the refining capacity of the refiners, approximately £300,000 per day, had the effect of raising the price for the gold arriving from South Africa and elsewhere

for disposal in the open market, thus enabling producers to secure rates above the Bank of England statutory selling price of 84s. 11½d. per ounce fine, the highest price quoted being 85s. 2d. per ounce fine on December 2.

During August, September, and October, owing to a temporary improvement in the sterling rate in terms of the franc, only quite unimportant amounts were withdrawn for Paris from the central institution. France, however, continued to secure the greater part of the weekly arrivals from the Cape, moderate quantities of which were actually purchased by that quarter while still in transit, reducing to a corresponding extent the amounts offered for sale in the open market. This practice was continued throughout the remaining months of the year, when on several later occasions almost the entire shipment was disposed of in this manner before arrival.

The reserves of gold, which had become reduced approximately to £152,000,000 by the recent exports to the Continent, began once more to appreciate and by the beginning of November had reached just over £160,000,000, the receipt of large amounts of sovereigns being chiefly responsible for the improvement referred to.

With a weakening in the London-Paris exchange rate in November, France resumed the withdrawal of gold from the Bank of England in addition to the weekly purchases in the open market, which continued until the end of the year. During December, amounts were also purchased from the central institution for Germany. The result of this increase in the continental demand for gold was reflected in the depreciation once again of the reserves of the metal in London, which by the end of the year became reduced to £147,625,622. About £3,000,000 of gold from Brazil arrived in London during the latter part of the year, of which a part was secured by Paris.

In addition to the receipt of about £37,000,000 in gold coin during 1930, which was secured by the central institution, gold bullion to the unusually high total of approximately £49,000,000 arrived in London for disposal. Of the gold offered for sale in the open market, the Bank of England secured under £2,000,000 compared with some £18,000,000 in 1929, when chiefly by bidding above the statutory buying price it was able to obtain substantial amounts of the metal.

The total exports of gold bullion from London to France and Germany during 1930 were as follows:

France	£55, 279, 402
Germany	15, 857, 074

Of the above, France purchased about £20,000,000 from the open market and Germany £10,000,000.

SILVER

The chief feature of the silver market during the period under review is undoubtedly to be found in the further substantial decline in rates. Following upon a depreciation of approximately 5d. in the previous year, the fall during 1930 has further reduced the price of the metal by nearly 7d. to the level of 14 7/16d., the lowest point ever yet recorded. Whereas the fall in 1929 was comparatively gradual, the market during the past year was subject at times to violent fluctuations, which were especially pronounced during the first half of the year.

As in 1929, the highest and lowest quotations occurred in the first and last months of the year respectively, 21⅛d. per ounce standard being quoted on January 2, and 14d. per ounce standard on the 31st of December. This represents a range in prices of 7 3/16d., which is the widest recorded since the year 1926, as will be seen from the following table:

	1930	1929	1928	1927	1926	1925	1924
	d.	d.	d.	d.	d.	d.	d.
Highest quotation	21⅛	26 7/16	28 7/8	28	31 13/16	33 7/16	36 1/16
Lowest quotation	14 7/16	21 5/16	26 1/16	24 3/4	24 1/8	31 1/16	31½
Average quotation	17 13/16	24 7/16	26 3/4	26 15/32	28 11/16	32 1/8	34
Range in prices	7 3/16	5 1/8	2 13/16	3 1/4	7 13/16	2 3/8	4 9/16

In so far as the various movements in price are concerned, the past year can be divided into the following three periods: January to June, during which the rate

depreciated 6 3/16d.; July to November, when steadier conditions prevailed to the accompaniment of a moderate recovery; December, when fresh weakness set in, depressing the price to 14 7/16d., or 1d. lower than the reduced level previously reached in June.

In 1929, owing to the existence of a large Chinese bull position and the abnormal increase in stocks during certain times of the year, the cash price was only quoted at a premium on two occasions. In the past year, however, with the exception of two days in September and three in December, the rate for prompt silver has ruled either the same as, or at a premium over, forward throughout the year, with the latter predominating. This is explained by the fact that the lack of confidence in silver has induced both India and China to maintain an oversold position, which at times reached quite substantial proportions. Holders of silver, therefore, experienced little difficulty in obtaining a premium for immediate delivery when the adjustment or prolongation of these contracts took place.

At the end of 1929 the quotations were 21 7/16d. per ounce standard for cash and forward deliveries, with the opening price for 1930 1/16d. higher. During January the market experienced somewhat violent fluctuations, the rate falling sharply to 20 5/16d., recovering temporarily to 21 1/16d. when further weakness set in, resulting in a depreciation in price to 20d. These movements were almost entirely due to purchases or sales on a large scale by Chinese operators in this market, influenced by variations in the tael rate in Shanghai. Throughout the month India was a persistent buyer of silver for shipment to both Bombay and Calcutta, the seasonal demand being intensified by the increased number of marriages which were in course of celebration upcountry in order to forestall the alteration in the marriage laws due to become effective shortly. In addition, the possibility of a duty being levied upon silver imported into India, which was regarded more seriously by the bazaar dealers than in recent years, acted as a stimulant to the demand for immediate shipment from this quarter.

The effect of these purchases was to a great extent offset by forward sales made simultaneously and the continuation of selling on continental account chiefly as the result of the disposal of demonetized coins from Paris, which constituted an important market feature in 1929. The large demand for shipment purposes produced a premium on silver for cash delivery, which at one time amounted to ½d., representing the widest difference between the two quotations since the early part of 1924.

As a result of the depreciation in the price of silver the Finance Minister of the Chinese Government decided on January 15 that, from February 1, the customs duties upon imports from abroad should be collected on a gold basis, other duties and charges, however, being treated as before. The Haikwan tael was to be discontinued as the unit of calculation and a new gold unit used equivalent to 19.7265 pence sterling. This alteration in the existing method of procedure was rendered necessary to safeguard the Government finances, which were being adversely affected by the depreciation in the value of the customs receipts.

Rather more stable conditions existed throughout the first three weeks of February, with rates ruling at the level of about 20d. Shanghai operators dealt both ways, although to a less active extent. The Indian demand for shipment continued, but, as before, these operations were chiefly in the form of "budla." At this time important purchases of silver were made on account of Hong Kong, partly for minting into dollars in London and later in Bombay and partly in the form of ordinary forward contracts. America was a free seller, and the continental supplies were further augmented by the disposal of large quantities of French francs previously held in Switzerland, which realized some 9,000,000 ounces of silver.

The decision on the part of the Indian Government to levy an import duty on silver of 4 annas per fine ounce, or about 20 per cent at the rates ruling at that time, announced on February 28, induced pronounced weakness, in both India and China, to the accompaniment of heavy forward selling from both quarters, which, together with large offerings from America, caused a sharp decline in price to 18 3/16d., the quotation on March 4. The placing of a duty on silver imported into India engendered the fear that the Chinese authorities might decide to adopt a similar course, which tended to increase the general nervousness which was apparent in the market at that time. The fact that no move in this direction appeared to be made by China materially assisted a return of confidence, and from this point a gradual improvement took place, the lower level reached inducing the covering of bear sales by India and some repurchases

by Chinese operators, in addition to a continuation of the demand from Hong Kong. As the result, 20d. was again reached on March 20.

This improvement was, however, not entirely maintained, but prices remained steady at a slightly lower level throughout the remainder of the month and during April. Extremely quiet conditions prevailed in the silver market during this period, with business much restricted.

The forward purchases on Hong Kong account, which had been more or less continuous since the beginning of February, ceased during the early part of April, and by the end of the month the continental sales which had constituted an important factor in the market throughout had practically ceased. A moderate demand from India continued for shipment, but again almost entirely in the form of "budla."

During the first part of May rates ruled steady at the level of about 19½d. Although China was inclined to sell, purchases by the Indian bazaars proved sufficient to absorb the amounts on offer. On the 16th of May a report was received that the Chinese customs authorities had decided to prohibit the exportation of bar gold and the importation of foreign coins. The effect of this announcement was a weakening in the tael rate and an increase in the selling by China. After a slight check, sales became more pronounced and general, both India and America being free sellers. Advices received from China at this time indicated the existence of a completely demoralized market in Shanghai, the position being further aggravated by the political troubles in India. With moderate bear covering constituting the only form of support, a sharp break in prices took place to the level of 15 13/16d., the quotation on June 4.

The lower level reached induced covering operations on a larger scale and with a temporary cessation of selling, the price recovered sharply to 16⅞d. by June 10.

A resumption of selling by Chinese operators, together with increased offerings from America, induced by the improvement in price again depressed rates, until 15 15/16d. was reached on June 24. From this point, although comparatively minor fluctuations occurred, the rate recovered once more to 16 5/16d., the quotation on the 26th of July.

The decision in July on the part of the Bombay Bullion Exchange to boycott the London market as from the September settlement date at first caused a fair demand for shipment in order that the silver might arrive in Bombay before the boycott became effective, but later business with the bazaars was much restricted.

In the early part of August quotations again fell to slightly below 16d., but recovered to 16⅛d. by the 21st of August. The market at this time was entirely dominated by China, dealings from that quarter being responsible for the various movements which took place. During the latter part of the month the report that a large amount of silver had been sold by the Indian Government direct to China had the habitual effect of inducing speculative selling with a consequent depression in price to 16 3/16d., but from this point a steady recovery took place to the level of 17d. by the 18th of September. Although this improvement was not entirely maintained, prices ruled in the neighborhood of 16½d. throughout the remainder of the month and during October and November.

Quiet conditions existed throughout this period. Chinese operators dealt both ways to a limited extent, these transactions being chiefly influenced by the adjustment of speculative positions in Shanghai. October witnessed the revival of the demand from the Indian bazaars both for shipment and to cover existing sales, showing that the boycott of the London market by the Bombay Bullion Exchange was not being so strictly enforced. There was also a distinct improvement in the consumption of silver on continental account, which during the early part of the year had been largely satisfied by the sales of demonatized coins. With America a free seller whenever any improvement in price took place, little difficulty was experienced in meeting the demand without materially affecting the level of prices. The available supplies at this time were augmented by the disposal of some 3,000,000 ounces of Indian Government silver and certain sales as the result of shipments to London of Persian krans.

The comparatively steady tone in existence during the last two months had done much toward restoring confidence in the market on the basis of the lower level then ruling, but this improvement in sentiment was only temporary, as a further sharp break in prices took place during December. Following weak advices from Shanghai, partly attributable to the importation of large quantities of commodities, which was brought about by the decision to increase the import duties from January 1, 1931, China became a persistent seller in an unwilling market, with the result that the price was driven down to 14½d., the quotation

2,100 bars of silver, as compared with 85,500,000 taels of sycee, 126,000,000 dollars, and 7,620 bars of silver at the end of 1929.

India.—In spite of the disturbed political conditions which have existed in India throughout the greater part of the past year, shipments to that country have amounted to nearly 90,000,000 ounces, which actually shows an increase of some 15,000,000 ounces when compared with 1929, for which the depreciation in price is largely responsible.

Silver used in trade.—The consumption of silver for trade requirements, both at home and abroad, has been affected by the general world depression. In America and Canada alone the estimated amount of 30,000,000 ounces of silver utilized for this purpose during 1930 shows a reduction of 25 per cent when compared with 1929.

1727	15.24	1768	14.80	1809	15.96	1850	15.70	1891	20.92		

NOTE.—From 1687 to 1832 the ratios are taken from Dr. A. Soetbeer, from 1833 to 1878 from Pixley and Abell's tables, from 1879 to 1896 from daily cabled prices from London to the Bureau of the Mint, and since from daily London quotations.

Ratio of Silver to Gold, as Affected by World War

During the period December, 1916, to June, 1920, it is probable that the world's basic silver price was that of New York rather than that of London. The normal relationship between the two prices—New York a fraction of a cent below the London quotation with exchange considered—did not prevail during this period, when the average monthly New York price varied between approximately 3 cents above and 6 cents below the London price. This period appears to have been initiated by enormous coinages to meet wartime needs, and large silver shipments from the United States to the Orient. Its close was coincident with the removal of the product of United States mines from the world market, purchases under the Pittman Act of April 23, 1918, having begun in June, 1920.

The ratio of silver to gold, based on the New York price, was for this period: Calendar year 1917, 24.85; 1918, 21; 1919, 18.44; 1920, 20.27.

With the partial release during the first half of 1919 of British governmental control of gold export, the London price of exportable gold advanced above its monetary par. The ratio of silver to this

gold, based on the average London price of both metals, follows: 1919, 17.53; 1920, 20.41; 1921, 32.34; 1922, 30.11; 1923, 31.35; 1924, 30.62.

Final release of British governmental control of gold export became effective April 28, 1925, when the Chancellor of the Exchequer of Great Britain announced that the restrictions authorized by the gold and silver (export control) act of 1920 on export of gold would be discontinued from that date. This had the effect of restoring the gold standard to the United Kingdom. The example of Great Britain was followed by Australia, New Zealand, Netherlands, and the Dutch East Indies, and on June 1 by South Africa. On April 29, 1925, the London quotation on gold dropped more than 1 shilling to 84s. 11d. per fine ounce, as compared with 84s. 11.45d., mint par.

Bullion value of the silver dollar [371¼ grains of pure silver] at the annual average price of silver each calendar year since 1837

Values of foreign moneys, October 1, 1931 [1]

Pursuant to section 522, Title IV, of the tariff act of 1930, reenacting section 25 of the act of August 27, 1894, as amended, the following estimates by the Director of the Mint of the values of foreign monetary units are hereby proclaimed to be the values of such units in terms of the money of account of the United States that are to be followed in estimating the value of all foreign merchandise exported to the United States during the quarter beginning October 1, 1931, expressed in any such foreign monetary units: *Provided, however*, That if no such value has been proclaimed, or if the value so proclaimed varies by five per centum or more from a value measured by the buying rate in the New York market at noon on the day of exportation, conversion shall be made at a value measured by such buying rate, as determined and certified by the Federal Reserve Bank of New York and published by the Secretary of the Treasury pursuant to the provisions of section 522, Title IV, of the tariff act of 1930.

A. W. MELLON,
Secretary of the Treasury.

[1] Department circular No. 1, published quarterly.

Values of foreign moneys

Country	Legal standard	Monetary unit		Value in terms of United States money	Remarks
Argentine Republic	Gold	Peso		$0.9648	Currency: Paper normally convertible at 44 per cent of face value.
Austria	do	Schilling		.1407	
Belgium	do	Belga		.1390	1 belga equals 5 Belgian paper francs.
Bolivia	do	Boliviano		.3650	13⅓ bolivianos equal 1 pound sterling.
Brazil	do	Milreis		.5462	Currency: Government paper convertible at 4.567 paper milreis to the gold milreis ($0.1196), by decree of May 23, 1928.
British Colonies in Australasia and Africa	do	Pound sterling		4.8665	
British Honduras	do	Dollar		1.0000	
Bulgaria	do	Lev		.0072	
Canada	do	Dollar		1.0000	
Chile	do	Peso		.1217	
China	Silver [1]	Haikwan Tael [2]		.3511	A unit of account, used only for customs purposes.
			Amoy	.3450	China's import duties are levied on a gold basis, the gold unit being defined as 60.1866 centigrams pure gold (equal 40 cents U. S.). China's export duties remain on a silver basis.
			Canton	.3440	
			Chefoo	.3300	
			Chin Kiang	.3370	
			Foochow	.3191

The statistics of foreign countries on production, import, export, and coinage of gold and silver, and stocks of money, published annually in the reports of the Bureau of the Mint, are obtained, so far as practicable, directly from the Governments of such countries by the representatives of the United States accredited to them.

A list of interrogatories covering the points on which information is sought is sent yearly to the United States ambassadors and ministers through the Department of State, and the replies in the form of reports, are forwarded directly to the Bureau of the Mint.

Receipts of replies to the interrogatories are frequently delayed in transmission and the available data for the calendar year under review are usually incomplete.

In the absence of official returns from foreign countries the most reliable data available are used in compiling world statistics. Where data other than from the interrogatory replies are published the source of the information is stated. Conversions of foreign moneys or values into United States equivalents have been made at the legal par rates unless otherwise stated (in the text).

Revised world tables for 1929 and tables for 1930, subject to revision, are printed at the end of this volume. Detailed data, arranged by continents and countries, follow herewith; they form the basis of the tables.

NORTH AMERICA

CANADA

Domestic silver coinage executed in home mints during the year ended December 31, 1930

Denomination	Pieces	Value
25 cents	961,174	$240.294
10 cents	1,827,071	182,707
Total	2,788,245	423,001

The amount of domestic silver coin withdrawn from monetary use for recoinage during 1930 was $401,865.

The amount of gold and silver, in the form of jewelry, dental scrap, etc., returned to monetary use during 1930 was as follows: Gold, 14,626 fine ounces, valued at $302,341; Silver, 4,351 fine ounces, valued at $1,682.

Production of gold and silver during 1930 [1]

Source of production	Gold		Silver	
	Quantity	Value	Quantity	Value

	Quantity		Value	Quantity		Value
	Kilos, fine	Ounces, fine	U. S. dollar	Kilos, fine	Ounces, fine	U. S. dollar
New bullion	20	643	13, 250	50	1, 607	500
Domestic coin						200
Total	20	643	13, 250			700

The total import of United States gold coin during 1930 was $50,000.

The quantity of gold and silver produced from deep mines and exported to the United States during 1930 was as follows: Gold, 422 fine kilos (13,567 ounces), valued at $280,241; silver, 91,978 fine kilos (2,957,093 ounces), valued at $1,093,440.

Approximate stock of gold and silver coin, also of paper money, used for monetary purposes on December 31, 1930

Character of stock	In home banks	In circulation	Total used for monetary purposes
Gold coin	$20,000		$20,000
Silver coin	750,000	$500,000	1,250,000
Notes of banks of issue		460,000	460,000

Premium on gold: Highest, 8 per cent; lowest, ½ per cent; average, 5 per cent. Legal rate, 2 pesos=$1 United States currency; commercial rate, 2.01—2.16 pesos =$1 United States currency.

Imports of gold coin from Salvador reexported in part to the United States during 1930, from $30,000 to $50,000.

Exports of gold and silver bullion to the United States during 1930: Gold, $280,241; silver, $1,093,440.

Laws Affecting the Currency

The following silver coins were established by decree No. 169 of March, 1930, and decree No. 114 of March 11, 1931:

Denomination	Fineness, thousandths	Weight, grams	United States equivalent
1 lempira	900	12.50	$0.50
50 centavos		6.25	.25
20 centavos			.10

NEWFOUNDLAND

The silver coinage executed in England for Newfoundland during 1930 consisted of 5, 10, 20, and 50 cent pieces, and amounted to $15,000.

The amount of Newfoundland bank notes in circulation on December 31, 1930, was $80,373.

Imports of silver coin during 1930: Returned Newfoundland currency, $47,103 from Canada and $4,300 from St. Pierre; new coin from England, $15,000.

NICARAGUA

Silver coinage executed at the Philadelphia Mint during 1930

Denominations	Pieces	Value
		Cordobas or U. S. dollars
25 centavos	20,000	5,000
10 centavos	150,000	15,000
Total	170,000	20,000

PANAMA

Domestic silver coinage executed at the Philadelphia Mint for Panama during the year ended December 31, 1930

Denomination	Pieces	Value
		Balboas or U. S. dollars
0.10 balboas	500,000	50,000
0.25 balboas	400,000	100,000
0.50 balboas	300,000	150,000
Total	1,200,000	300,000

Practically all silver coins of a previous issue disappeared when the price of silver was high during the World War. However, silver coins of this previous issue with a face value of $136,000 and a fine silver content of 194,685 ounces (troy) were in the hands of the Government. These coins were melted and the silver therein used in the new issue of silver coins.

Estimated quantity of gold and silver used in the industrial arts during 1930

Material used	Gold	Silver
Dentists' material	$1,200	$2,000
Old jewelry, plate, etc	2,000	
Foreign coin	2,000	
Total	5,200	2,000

United States gold and silver coins and currency circulate freely and are legal tender in Panama. The fact that the Panama Canal uses United States coins and currency and that American tourists and travelers make purchases with United States coins and currency make it unnecessary to import coins and currency into Panama.

The total amount of silver coin used for monetary purposes on December 31, 1930, was $300,000.

Laws Affecting the Currency

According to law No. 73, of December 19, 1930, the silver coins of Panama must be of the same value and size as the corresponding United States coins; the silver balboa shall weigh 26.73 grams and be equivalent to the gold balboa described in article 324 of the Fiscal Code; article 2 of law No. 62 of 1917 and articles 327 and 328 of the Fiscal Code are repealed.

SALVADOR

Note circulation and gold reserve on December 31, 1929 and 1930

Stabilization Office Abolished

[From U. S. Department of Commerce Foreign Financial News, March 25, 1931]

By decree No. 19,423 of November 22, 1930, the Chief of the Provisional Government of Brazil decreed that (1) in view of the virtual suspension of exchange or emission of notes of the stabilization office, that office should cease to exist and its functions should be transferred to the Bank of Brazil; (2) that the gold existing in the office should be transferred to London to the credit of the representative of the Brazilian National Treasury there, where it would be utilized only for making payment on Brazil's external debt. (Ambassador Edwin V. Morgan, Rio de Janeiro, December 29, 1930.)

CHILE

The domestic silver coinage executed in home mints during 1930 consisted of 480,000 one-peso pieces ($58,416).

The amount of gold and silver coins withdrawn from monetary use during 1930 was as follows: Domestic silver coin for recoinage, 480,000 pesos ($58,416); domestic gold coin for industrial purposes, 500,000 pesos ($60,650); Peruvian gold coin for industrial purposes, 40,000 pesos ($4,868).

Estimated quantity of gold and silver used in the industrial arts during 1930: Domestic gold coin, 500,000 pesos ($60,850); foreign gold coin, 40,000 pesos ($4,868); new silver bullion, 200,484 pesos ($24,399).

BELGIUM

The silver coinage executed in Belgium for Poland during the year ended December 31, 1930, consisted of 4,510,000 5-zloty pieces, having a face value of 22,550,000 zlotys ($2,531,120).

The amount of domestic silver coin withdrawn from monetary use for recoinage during 1930 was 10,394,000 francs ($2,006,042).

The total import of United States gold bullion during 1930 was 7,660 francs ($213).

Production of gold and silver during 1930

Source of production	Gold		Silver	
	Kilos, fine	Ounces, fine	Kilos, fine	Ounces, fine
Domestic [1]	6,241	200,648	89,735	2,884,980
Colonies [2]	5,958	191,550		

[1] From imported ores.

[2] Largely alluvial.

Approximate stock of gold in national bank and note circulation on December 31, 1930: Gold, 1,354,545,000 belgas ($188,281,755); Government notes, 142,866,000 belgas; national bank notes, 3,163,556,000 belgas.

Although the Belgian gold coins have not been demonetized de facto, they no longer circulate, owing to the fact that their face value no longer corresponds to the legal intrinsic value resulting from the new basis established since the monetary stabilization of October 25, 1926.

Laws affecting the currency

The law of June 12, 1930, authorized the issue of subsidiary coins in the amount of 1,200,000,000 francs.

In execution of this law, the royal decree of June 27, 1930, authorized the coinage of 10 and 5 franc coins, made of pure nickel, and weighing 17½ and 14 grams, respectively.

New Coins in Belgium

[From Commerce Reports, January 13, 1930]

The coin commission has adopted a proposition of the mint to modify the composition of the 5, 10, and 25 centime coins, since those now used have a metallic content of greater value than the face value of the coins and consequently are melted down and disappear from circulation. The new coins will contain 10 per cent nickel and 90 per cent copper, whereas the present percentages are 25 and 75, respectively.

Imports into and exports from Denmark of gold and silver during 1930

For Greece:		
Silver—	*Drachmas*	*U. S. dollars* [1]
20 drachmas	230,000,000	2,990,000
10 drachmas	75,000,000	975,000
Total	305,000,000	3,965,000
For Hedjaz:		
Silver—	*Reals*	
Reals	400,000	194,660
Half-reals	50,000	24,332
Quarter-reals	50,000	24,332
Total	500,000	243,324

[1] Conversion rate, 1 British dollar = $0.30204; 1 real = $0.4866, at the 1930 average price of silver in London, $0.38724 per fine ounce.

Silver coinage executed at the mint, Birmingham (Ltd.), for Travancore, during the year 1930

Denomination	Pieces	Value	
		Rupees	*U. S. dollars*
One-half rupee	100,000	50,000	18,250
One-fourth rupee	200,000	50,000	18,250
Fanam	700,000	87,500	31,937
Total	1,000,000	187,500	68,437

The amount of British gold coin (including light-weight coin) received in the Royal Mint, London, in 1930 for conversion into bullion was £33,426,000 ($162,667,629). The amount of foreign (Greek and other Latin Unions) silver coin received for recoinage was 665,489 fine ounces.

Estimated quantity of gold and silver used in the industrial arts during 1930

Material used	Gold			Silver		
	Quantity	Value		Quantity	Value	
	Ounces, fine	*Pounds sterling*	*U. S. dollars*	*Ounces, fine*	*Pounds sterling*	*U. S. dollars*
New metal	350,000	1,487,500	7,238,919	6,500,000	517,877	2,520,248
Old plate, etc	150,000	637,500	3,102,394	2,000,000	159,347	775,462
Total	500,000	2,125,000	10,341,313	8,500,000	677,224	3,295,710

The quantity of silver produced during 1930 was 1,274 fine kilos (40,959 ounces), valued at £3,018 ($14,687).

Approximate stock of gold and silver, also of paper money, used for monetary purposes on December 31, 1930

Character of stock	In Bank of England (issue department)	In other banks	Elsewhere	Total used for monetary purposes
Gold coin [1] and bullion	£147,626,000			
United States equivalent	$718,421,929			
Silver coin		[2] £14,495,517		[3] £49,000,000
United States equivalent		$70,542,433		$238,458,500
Bank of England notes	£38,824,000		£368,801,000	£407,625,000

[1] Gold coin held by banks (including Bank of England) in Great Britain and Ireland (including the Irish Free State) on June 30, 1929, amounted to £119,640,871.

[2] On June 30, 1929, in banks (excluding the silver coin held in the issue department of the Bank of England) of Great Britain and Ireland (including the Irish Free State).

[3] At the end of 1929, estimated total silver coin in circulation in Great Britain and Northern Ireland (including banks but excluding the amount held in the issue department of the Bank of England).

NOTE.—The Irish Free State has issued its own currency; British currency still circulates there largely, for the present. It has not been possible to exclude in the above figures bank holdings of coin in the Irish Free State.

Price of gold in 1930: Highest, 85s. 2d.; lowest, 84s. 10d.; average, 84s. 11.93d.

Silver Content of Coins

[From Samuel Montagu & Co.'s Weekly Bullion Circular, August 20, 1930]

The following extract, taken from the speech of M. Vissering, the president of the Netherlands Bank, at the annual meeting of that bank, hints at the possibility of yet another step in the "flight from silver" which has been more or less continuous since the period of extraordinary high prices obtaining just after the war. It will be remembered that Holland was one of the first countries to reduce their silver coinage, a bill to this end being introduced by the Netherlands Government as far back as 1919 and becoming effective the following year:

"For the Netherlands and the Netherlands East Indies the fall in the price of silver is especially of importance in view of the possible substitution of the larger silver coins by nickel media of payment. For, on the one hand, that fall causes the value of the guarantee, which, according to some, the present coins represent for the holder in view of their higher metallic value, constantly to diminish while on the other hand, the more the price of silver falls the greater will be the loss of the Government should the silver coins be eventually converted into nickel."

According to the annual report of the Netherlands Bank the stock of silver and subsidiary coin held by both the Netherlands Bank and the Bank of Java at the beginning of this year was Fl. 54,085,000, a small proportion of which is presumably in smaller coins, for which nickel is already used.

NORWAY

The quantity of silver produced from dry or silicious ores during 1930 was 10,507 fine kilos (337,800 ounces), valued at 543,827 kroner ($145,746).

Soviet Gold and Finance

[Translation of an article appearing in the Riga (Latvia) Russian-language newspaper Sevodnia of February 11, 1931]

WHY IS THE SOVIET GOLD FLOWING TO GERMANY?

The Soviet Government is deprived of the possibility of "exporting" gold to Paris and London for the following reasons: As will be remembered, the Banque de France is in litigation with the American Guaranty Trust Co. on account of the Soviet gold that was sent to the latter bank from Moscow, and upon which, on the application of the French bank, an embargo was placed by court verdict, the French bank having filed a suit against the Soviet Government for the return of the gold deposits made by France to the amount of 80,000,000 gold rubles.

Two years ago an American court declared itself noncompetent in this matter, and the embargo was removed. After this, however, at the instance of the Washington Government, the gold was removed from America and returned to the Soviet Government. For fear of another embargo in any of the European ports, the Soviet Government dispatched a special steamer which transshipped the precious cargo at night, in the open sea, to a German vessel which took the gold to

Germany. The readers of the Sevodnia will probably recollect this transshipment of gold in the open sea, in the darkness of night, accounts of which were at that time circulating throughout the press of the entire world. Ever since that time Moscow has been very careful about gold shipments abroad, since the Banque de France has in its hands a writ of the Paris Commercial Court, placing an embargo on any property whatsoever belonging to the Soviet Government, including gold.

In addition to this, the Banque de France has in Paris alone about 10 additional judgments, which are still unsatisfied, against sundry Soviet institutions, totaling about 40,000,000 French francs owing to various persons. Twenty-five million francs will soon have to be paid in connection with the Litvinov bills of exchange, and a number of other cases against the Soviet commercial mission and other Soviet enterprises are still pending. No sooner will a shipment of Soviet gold appear in any French port than the messenger of the French court will immediately put his hands on it.

In London the same danger threatens. As will be remembered, the arbitration court in the case of the Lena Goldfields gave judgment against the Soviet Government for 13,000,000 pounds sterling in favor of the above company. At the present moment diplomatic negotiations are going on, but the board of the Lena Goldfields threatens that it will have the moneys and the property of the Soviet attached. English courts are independent, and have the right to issue orders of attachment. This would necessitate a formal complaint in court. At any rate, be that as it may, so long as the Lena Goldfields affair has not been settled, no gold can be shipped to London.

As regards New York, although the shipment of Soviet gold to New York or to any other State of the United States is not prohibited officially, yet the banks, apprehending new lawsuits on the part of the Banque de France, are wary of buying Soviet gold.

The Department of State has unofficially requested the principal American banks to refrain from any transactions connected with the purchase of Soviet gold, or at any rate from causing it to be shipped to the United States. Thus Germany, that is, the Reichsbank is the only market for selling Soviet gold.

As far back as 1925 the Soviet State Bank opened at the Reichsbank an account "on call" on the security of gold in specie and in bullion. This was done by the now retired Scheinmann for two reasons:

1. In order that the efflux of the gold might figure in the balance sheets of the State Bank as "gold deposited abroad with foreign correspondents," and also that it might figure in "metal securities of the emission of currency"; and

2. In order that, by the practice of drawing on the Reichsbank, and obtaining from it letters of guarantee in respect of Soviet bills of exchange and Soviet transactions, the credit of the Soviets in London, Paris, and New York might be increased. Such financial tricks, by the way, were performed by Scheinmann with two Berlin banks, the Berliner Handelsgesellschaft and the Deutsche Bank. Needless to say, these transactions were very expensive, seeing that, while the Soviet Government received 6 per cent per annum on its deposits, it had to pay in its own turn about 14 per cent in the shape of commissions, etc.

Since that time all actual transactions in connection with sales of gold to the Reichsbank are performed under the guise of pledging transactions. However, of the gold shipments sold to the Reichsbank in the course of the past six years, totaling in all 521,000,000 marks (see the official accounts of the Reichsbank), not a single pound of gold has found its way back to Moscow. The Soviet Government loses at least 5 per cent on the value,[1] not counting transportation expenses, for it pays transportation right up to the vaults of the Reichsbank.

The latest shipments of gold which came to Berlin via Riga, and which contained the remainder of the Rumanian national gold reserve removed to Russia during the war and stored in Moscow (in Nastasiensky Street in the building of the Loans Bank) were utilized, chiefly for paying American and English bills of exchange to the total amount of $46,000,000. The Reichsbank issued in all eight drafts on London and New York, made out in the name of the Berlin Soviet Commercial Mission, to the above mentioned total. The German payments due on January 30 amounted to 24,000,000 marks. Eleven million marks of this sum were advanced by the Dresden Bank and Darmstadt Bank on security of raw materials, such as oil, timber, etc. All the pictures and other valuable objects of art which are offered for sale by Berlin and Leipzig antique dealers are pledged at the said banks. Aside from these securities, the Soviet Commercial

Translator's notes:—[1] It is not known whether this item of loss is included in the loss of 14 per cent mentioned in the preceding paragraph. [2] Of the principal?

Mission has issued short-term bills of exchange indorsed by the Soviet State Bank. The remaining 13,000,000 marks were got together with great effort, all accounts current abroad being drawn upon for this purpose.

In addition to this, the Soviet State Bank sent $300,000 in small notes which had evidently been collected from foreigners, and persons receiving remittances from America.

The principal payments of Soviet institutions in Europe and America are due at the end of March and the beginning of April this year. These payments are estimated at $50,000,000. The conversion into cash of export merchandise is carried on with feverish haste. The payments to the firm of Shalit Bros. in London, due at about the same time, are estimated at $5,000,000. Ten million dollars is the most that can be expected to be realized from other sources.

Where are the other $35,000,000 to come from?

For this purpose it will be necessary to go on utilizing the remaining balance of gold, and it must be said that Moscow is doing this very reluctantly, and only under the pressure of dire need, for there they understand very well that with every new shipment of gold to capitalistic Europe, the communistic foundation is weakened. An agreement already has been arrived at concerning a new sale of gold to the Reichsbank, to the amount of 65,000,000 marks, the shipment to proceed by the same route to Berlin via Riga by rail, since by sea, as stated above, the transportation is wrought with risk. Parallel with this, negotiations are on foot with German concerns about postponement, for three months, of the payments due in March and April, 50 per cent [2] to be paid down, plus the interest for the postponement. Khinchuk, the Soviet plenipotentiary representative, visited in these days the president of the Reichsbank, Doctor Luther, and requested him to give his assistance in the matter of postponing the payments shortly due.

Khinchuk pointed out that in the person of the Union of Socialist Soviet Republics the Reichsbank has a large client which could scarcely be replaced, and that therefore it would be well to make concessions to the Soviets. Doctor Luther replied to this request of Khinchuk's as follows: "The Reichsbank is an institution not depending on the State, but one that depends on its shareholders, 40 per cent of whom are foreign bankers. The Reichsbank is bound to strictly adhere to its constitution. It is compelled now to observe a policy of rigid economy, reducing credits in connection with the discounting of bills of exchange, so as to be able to reduce the emission of bank notes, which tactics are forced upon it by the prevailing conjuncture, part of German private capital going abroad, and many foreign credits being canceled." Nevertheless, Luther is going to start negotiations with some of the German industrialists, who will do all in their power to help the Soviet Government to overcome the prevailing financial crisis.

Some days ago, in a private interview, Doctor Luther was asked the question, How much gold, in his opinion, was left in Moscow?

To this Doctor Luther replied: "As a person in an official capacity, it is very difficult for me to answer this question, for a number of reasons * * * I am not in a position to criticize the emission bank of a Government with which we maintain friendly diplomatic and commercial relations. I am therefore obliged to believe in the official balance sheets issued by the Soviet State Bank. To what extent that balance sheet reflects the actual condition of the assets of that institution, this is a thing that is not within my province to judge.

"For the rest, the Reichsbank is not in the least measure a creditor of the Soviet State Bank. We are discounting Soviet bills, furnished with the indorsements of our regular clients, within the limits of the credits guaranteed by the Government of the Reich."

YUGOSLAVIA

Quantity of gold and silver presented at the bureau for stamping of precious metals (used in the industrial arts) during the year ended December 31, 1930: Gold, 773 fine kilos (24,852 ounces), valued at 38,159,900 paper dinars ($671,614); silver, 4,970 fine kilos (159,786 ounces), valued at 9,940,714 paper dinars ($174,957).

The quantity of gold and silver extracted abroad from the copper ores of the country during 1930 is estimated as follows: Gold, 720 fine kilos (23,148 ounces); silver, 3,120 fine kilos (100,308 ounces).

Metallic stock and note circulation of the National Bank on December 31, 1930: Gold, 98,575,852 (gold) dinars ($19,025,139); silver, 4,759,194 (gold) dinars ($918,524); notes, 5,396,532,715 paper dinars.

Premium on gold in 1930 (exchange rate of Swiss franc): Highest, 1,095.90 per cent; lowest, 1,095.75 per cent; average, 1,095.90 per cent.

ASIA

AFGHANISTAN

Currency

[From United States Consul at Karachi, India, September 11, 1930]

The Official Unit

The official unit of currency in Afghanistan is the silver afghani, commonly known as an Afghan rupee. The value of the afghani in United States currency fluctuates with the price of silver, and has been declining recently. On August 2, 1930, the exchange value of afghanis was 100 afghanis equal 33 Indian rupees. The Indian rupee has a fixed value of $0.365. On that basis the afghani would be worth $0.12045.

The gold unit of currency is known as the amani. Normally 20 afghanis are equal to one amani. Owing to the decline in the price of silver, this ratio no longer holds. The value of an amani in Indian rupees fluctuates from day to day. On August 1, 1930, an informant at Peshawar stated that the Amani was worth 15 Indian rupees. At that rate the amani would be worth $5.475.

The official decree establishing the currency in Afghanistan was issued in 1305, according to Afghan reckoning, which corresponds to 1925.

Legal Tender

* * * The Afghan Government will accept for taxes and customs duties only its own coins, i. e., amani, afghani, and kabuli. The latter is a silver coin of old standing. Eleven kabuli are equivalent to 10 afghani. Other currency circulates freely in the country * * *

Foreign Currency

Foreign coins and notes circulate freely in Afghanistan. British gold sovereigns and paper pound notes are frequently used. Indian rupees and notes are common. Russian gold coins are in use. Old silver coins known as gajrees circulate freely in Afghanistan as well as Persia. Coins circulate on the basis of their gold or silver content * * *

SPECIFIC INFORMATION ON METALLIC CURRENCY

The recognized currency system is comprised of the following coins:

Gold—Amani, nim (half) amani. Silver—Afghani, nim afghani, 20 pul. Copper—15 pul, 10 pul, 5 pul, 1 pul.

(There are 100 pul in one afghani.)

Besides the foregoing there are also in common circulation the following coins:

Gold—5 amania piece equal at normal exchange to 75 kabuli; 2 amania, equal at normal exchange to 30 kabuli.

Silver—5 kabuli, 2½ kabuli, 1 kabuli, nim kabuli, 20 paisa or 1 thanga or 1 abbasi.

Copper—10 paisa or 1 sanar, 5 paisa or 1 shahi.

(There are 60 paisa in 1 kabuli.)

As indicated above, 10 afghani exchange for 11 kabuli. When afghani were first issued it was the intention gradually to do away with the kabuli. This is still the intention of the Government, but apparently no date has yet been set for withdrawing the kabuli rupee from circulation.

The alloy used in Afghan coins follows the Russian standard of fineness. Both the silver afghan and the gold amani have 90 per cent of silver and gold, respectively, and 10 per cent copper. The nim afghani contains 50 per cent silver and 50 per cent copper.

Bullion in India is measured in ratis, mashas, and tolas. Eight ratis equal 1 masha and 12 mashas equal 1 tola. The tola is equivalent to 180 grains Troy, the exact weight of an Indian silver rupee.

The best information it has been possible to obtain indicates that the amani has a gold content which weighs 9 mashas. The gold content of an amani would thus be 135 grains Troy.

Similarly the silver content of an afghani is 9 mashas 3 ratis, or 140.625 grains Troy.

ARABIA

ADEN

Premium on gold in 1930: Highest, 4 per cent; lowest, 1½ per cent; average, 3 per cent.

Imports into and exports from Aden of gold and silver during 1930

HEJAZ

Domestic silver coinage executed at the royal mint, London, for Hejaz during 1930

Denomination	Pieces	Value	
		Rial	[1] *U. S. dollars*
1 rial	400,000	400,000	194,660
½ rial	100,000	50,000	24,332
¼ rial	200,000	50,000	24,332
Total	700,000	500,000	243,324

[1] Conversion rate, 1 rial = to $0.4866.

Currency of Hejaz

[From Commerce Reports, August 18, 1930]

The standard gold currency of the Hejaz is the pound sterling. The silver rial is worth 2 shillings, 10 rials thus being equivalent to 1 pound sterling. Smaller nickel coins—called Hejaz piasters, or "Ghursh Miris"—circulate on the basis of 11 to the rial. "Ghursh Miri" is doubtless a carry-over from the former Turkish régime. There are also one-quarter and one-half rial silver pieces, worth, respectively, 2¾ and 5½ "Ghursh Miris." The smallest coin is the "Ghursh Duruz," worth half of a "Ghursh Miri." (The par value of the rial in American currency is $0.4866, that of the "Ghursh Miri" is $0.044, and of a "Ghursh Duruz," $0.022.)

[From reply to U. S. Mint interrogatory for 1930]

Silver Maria Theresia dollars are most generally used as currency.

OMAN

Currency

The British-Indian rupee continues to make headway, although the Austrian Marie Theresia dollar, locally known as "riyal" or "qurush," is still the chief currency of the interior. There is only one Oman copper coin called "baiza" or Muscat pice, corresponding in size with the Indian pice and worth about one-sixteenth of an anna or one-eighth of a United States cent. This coin was minted in England in about 1897. Copper pice of Zanzibar, German East Africa, and Persia also circulate in limited number equal in value to the Oman baiza.

The average rate of exchange between the Austrian Marie Theresia dollar and rupee corresponding with the baiza during the financial year 1930–31 has been: Seventy-six rupees=100 dollars, 248 baizas=1 rupee, 194 Oman baizas=1 dollar.

In addition to the above, there is an imaginary coin of accounts called mohamadis and ghazis. Twenty ghazis=1 mohamadis; 11½ mohamadis=1 dollar; 100 mohamadis=1 taman. These are very seldom used now.

There is no bank. Hundis (bills of exchange) are used in foreign trade among the merchants.

BRITISH INDIA

Domestic silver coinage executed in home mints during the year ended December 31, 1930

Denomination	Pieces	Value	
		Rupees	*U. S. dollars*
Half rupee	2,036,000	1,018,000	371,570

Indian Silver Market in 1930

[From Foreign Financial News, U. S. Department of Commerce, Feb. 20, 1931]

With silver weak throughout 1930, imports totaled 97,389,000 ounces. Government sales are estimated at 21,500,000 ounces. (Trade Commissioner George C. Howard, Calcutta, February 2, 1931.)

50 cents [4]	3, 000, 000	1, 074, 606	319, 792
Total	409, 140, 000	135, 902, 606	40, 443, 256

[1] Conversion rate, 1 Yuan dollar = $0.29759, at the 1930 average price of silver in London, $0.38724 per fine ounce.
[2] Coined at Hanchow mint.
[3] Coined at Canton mint.
[4] Coined in Yunnan Province.

NOTE.—Subsidiary coins in China, due to the reduction of fineness of the silver at the time of minting are at a 20 per cent discount of silver dollars.

There are 30 mints in China operating at different times, more or less autonomous from the control of the national government, being under the direction of provincial authorities. Few of the mints report fully their activities to the national government.

The amount of domestic silver coin withdrawn from monetary use during 1930 was as follows: For recoinage, 2,000,000 Yuan dollars ($595,180); for industrial use, 5,000,000 Yuan dollars ($1,487,950).

The quantity of silver used in the industrial arts, during 1930 was about 25,000,000 troy ounces.

The domestic production of gold in 1930 from all sources was no more than 100,000 troy ounces, a liberal figure. There was no silver mined or produced in 1930.

Approximate stock of gold and silver, also of paper money, used for monetary purposes on December 31, 1930

Character of stock	Total used for monetary purposes
	Yuan dollar
Silver coin	1, 991, 700, 000
Silver bullion and sycee	208, 300, 000
Total silver	2, 200, 000, 000
United States equivalent	$654, 698, 000
Government notes [1]	23, 000, 000
Notes of banks of issue	277, 000, 000
Total notes [2]	300, 000, 000

[1] Issued by the Central Bank of China.
[2] This total is for Shanghai consular district only. Shanghai notes are almost entirely in circulation, being at a premium in many parts of the interior.

Ratio of Gold Value to Actual Currency of Country During 1930

Gold was not at a premium in relation to the actual currency. On the contrary, since an embargo was placed upon its export (governmental order dated May 16, 1930), gold was at a discount of from 3 to 7½ per cent, due to the possibility of confiscation of stocks for attempted smuggling from the country, and the difficulties caused by not being able to make shipments abroad.

Coinage, Currency, and Banking Laws

There was a banking law enacted by the legislative Yuan of the national government, which, as yet, has not gone into full effect. It is now being subjected to revision.

During the first quarter of 1930 a step of far-reaching importance, involving a basic change in the method of assessing and collecting Chinese maritime customs revenue, was taken by the Chinese Government. On January 16, it was announced that import duties and dues would be collected in gold. This and explanatory notifications paved the way for the establishment of the customs gold unit used as the basis for assessing duties on foreign imports.

[1] Conversion rate, 1 Haikwan tael=$0.46726, at the 1930 average price of silver in London, $0.38724 per fine ounce.

It is impossible to give only an estimated figure for the export of all gold from China to foreign countries during 1930, as there was an embargo placed on its export from May 16 throughout the year. Hence the figures for gold exports given in the table are really inaccurate, as, after May 16, gold did leave China, for it was smuggled first to the British colony of Hong Kong and from there exported abroad.

Before May 16 gold totaling $9,833,105 United States currency in bars was shipped from Shanghai to the United States, according to American consular invoice returns. After this date, these returns indicate, gold exported from Hong Kong to the United States amounted to $1,054,319 in coin and $8,269,621 in bars, or a total of $9,323,940, United States currency. Thus records actually show a total of $19,557,045 worth of gold (United States currency) exported from China to the United States during 1930. As the United States apparently took a large percentage in value of all gold shipped from China to all foreign countries during the year, reflected in the customs returns, the total estimate can be made from this figure.

The Chinese maritime customs returns, in Haikwan taels, for gold exported from the country nominally for the whole year (actually until May 16), and the true export of silver for the entire year, are given in the above tables.

China's Import Duty on Gold Basis

[From the Bankers' Magazine, London, February, 1930]

A special correspondent of the Morning Post, writing on January 15, states that the National Government took the first official measure to counteract the silver slump when the Finance Minister to-day announced that import customs duties from abroad would be collected on a gold basis, beginning on February 1. The Haikwan tael, the previous unit for calculating the duties, is to be superseded by a new gold unit equal to 60.1866 centigrams of pure gold, equivalent to a 40-cent gold dollar or 19.7265 pence. As heretofore, dollars, taels, and other currencies will be accepted in payment of duties, and the exchange rates will be officially announced from time to time. The conversion rate from February 1 to March 16 will approximate to the average rate of exchange prevailing in the last quarter of 1929. After March 16 the approximate average rate will be that for the month of January, 1929. From February 1 to March 15 the specific import duties now expressed in Haikwan taels will be converted into the new gold unit on the basis that one Haikwan tael equals 1.50 of the new unit. Beginning on March 16 the conversion basis will be that 1 Haikwan tael equals 1.75 of the new unit. Mr. Soong, the Finance Minister, states that the measure is necessary to safeguard Government finances, as Government gold payments amount to over £9,000,000 annually, and the cost of meeting these payments in national currency at the current rate of exchange was 60 per cent greater in 1925 and 20 per cent greater in 1928. Mr. S. H. Kung, the Minister of Industry, Commerce, and Labor, interviewed at Nanking yesterday regarding the relief measures for the silver slump, advocated an eventual, but not immediate, adoption of gold standards.

China and the Gold Standard

[From Bankers' Magazine, London, May, 1930]

The report on Chinese currency of the Kemmerer Commission of Financial Experts, submitted last November to His Excellency T. V. Soong, Minister of Finance, has now been published. The report contains a draft law for the gradual introduction of a uniform gold-standard currency system throughout China, but without the coinage circulation of gold. Dealing with this draft law the report, according to a Reuter's message, says: "Currency reform, which is urgently needed in China, should involve two things, the replacement of the present confused currencies by a uniform and nation-wide currency system and the introduction of the gold standard. The chaotic condition of China's currency is a serious handicap to trade and to the development and prosperity of the country. China is the only important country to-day upon the silver standard. The silver standard is also a great handicap to China, particularly in the disturbing effect it has upon the country's foreign trade, and in the difficulties it creates in the management of the Government's finances, since Government receipts are almost wholly in terms of silver, while a large part of the payments are fixed in terms of gold." The new gold currency unit, for which the name "sun" has been suggested, is to contain 60.1866 centigrams of pure gold, and therefore to have a value equivalent to 40 cents in the United States currency (S. 2.50=$1), to 1s. 7.7265d. sterling, and to 0.8025 Japanese gold yen. This unit was selected largely because it is of practically the same value, in terms of gold, as the silver dollars now current in most parts of China. The project provides for silver coins of one sun, 50 cents, and 20 cents; nickel coins of 10 cents and 5 cents; and copper coins of 1 cent, ½ cent, and ¼ cent. The project does not provide for the minting of gold coins. Although the project gives the Government the option of redemption in gold bars, it is expected that this form of redemption will be rarely, if ever, used. To provide for the sale abroad of drafts payable in Chinese money, a gold-standard trust fund is to be established which is to amount to at least 35 per cent of the value of the coins in circulation.

Currency Reform in China

[By Trade Commissioner Frank S. Williams, Shanghai. In commerce Reports, May 5, 1930]

* * * As an initial step, the ministry of finance of the National Government has drawn up a definite schedule for the adoption of the new silver dollar and the abolition of the tael. The new schedule becomes effective in the near future in the Kiangsu and Chekiang Provinces only. If successful in these areas, it gradually will be extended to the rest of China. * * *

The new plan involves the circulation by the Central Bank of China of the new silver unit, named the "Sun," and worth approximately $0.40, and of subsidiary coins as recommended in the financial commission's report. These subsidiary coins will consist of 50-cent, 20-cent, 10-cent, and 5-cent pieces. All bank notes issued by the various commercial banks and at present in circulation in Kiangsu and Chekiang are to be recalled as soon as possible and to be replaced by the bank notes and coins issued by the Central Bank of China.

The Shanghai Maritime Customs has announced that, beginning April 15, 1930, import duties fixed in terms of the new customs gold unit, and payable in Shanghai, may be paid in cashiers' orders or approved checks drawn on the Central Bank of China's Shanghai office, in terms of customs gold units. * * * Importers also may continue to pay import duties in dollars or taels, as at present.

[From Foreign Financial News, U. S. Department of Commerce, February 20, 1931]

To Prohibit Melting of "Cash" (Currency)

[The China Weekly Review, December 13, 1930]

The Kuo Min news agency on December 2 announced that the ministry of finance has in contemplation the adoption of regulations prohibiting the melting of "cash" coins and export of the metal. The report stated that while "cash" are no longer used as currency in the ports, they still circulate in the interior. Recently it was reported that merchants were buying up the coins, melting them down, and exporting the metal.

Change in Annual Settlement Date not Fully Accepted—Effects of Silver Drop

[Commercial Attaché Julean Arnold, January 16, 1931, Shanghai]

Although Chinese shops and business houses in trading ports are increasingly receptive to the western calendar, modern Chinese banks are practically the only concerns which made their 1930 annual settlements on the foreign New Year. The bulk of Chinese business enterprises still base their fiscal year on the Chinese calendar.

Annual settlements throughout the country were generally favored by the cessation of civil war and the good crops, but adversely affected by decreased demands abroad for Chinese commodities. Importing concerns are seriously affected by the severe decline of silver, which is resulting in heavy advances in the local prices of kerosene, gasoline, canned goods, and provisions, while virtually stopping new orders in many lines. Instances are numerous of Chinese dealers being unable to take delivery of goods arriving, because they failed to settle exchange at earlier and more advantageous rates.

Silver Purchases in China in 1930

[Finance and Commerce, December 31, 1930]

At the opening of 1930 large extra supplies of silver were landed in Shanghai, consigned principally by Indo-China. Aside from 16,450 silver bars landed here in January, 1930, Saigon sent about 20,000,000 silver dollars. In this manner excessive cash funds became available at Shanghai, inducing the authorities to place an embargo on the import of foreign minted silver coins. In the course of the first six months, 44,000 bars of foreign silver (aside from coin) were landed at Shanghai, representing 44,000,000 taels in value. During the second half-year, however, barely 3,000 silver bars arrived here, all of which were promptly reexported.

The reduction in silver imports during the second semester was generally welcomed in consideration of ample stocks being available. Canton, on the other hand, bought large quantities of foreign silver for mint operations; the latter however ceased in December. The Hangchow mint having been deprived of bar silver supplies, in the course of the second half-year, had recourse to the next best thing—sycee.

Gold Bar Market Reflects Smuggling

[Finance and Commerce, December 31, 1930]

In May, 1930, the authorities forbade the export of gold from China, in order to conserve the yellow metal in the country. * * * The result of the embargo has been wide speculation and extensive smuggling of gold. Owing to this

artificial measure there was, at times, a deviation from parity up to 60 taels a bar, while on other occasions the disparity was reduced to only 14 taels. On silver values the restriction failed to exert any influence, except perhaps a harmful one. Under these conditions it is plausible that it would be best to rectify the mistaken measure by reinstituting the free movement of gold from and into China.

CHEFOO

CURRENCY

The paper money in use (1930) at Chefoo is that issued by the Bank of Communications (about 1,000,000 Yuan dollars) and the Bank of China (about 500,000 Yuan dollars), issued in denominations of 1, 5, and 10 dollars, and small amounts of 10, 20, 30 and 50 cent paper money issued by money changers. Silver is also used.

Imports into and exports from Chefoo of silver during 1930

Chinese ports	Imports		Exports, coin
	Coin	Bullion	
Antung		$17,750	
Tientsin	$31,167		
Lungkow	35,842	3,226	
Shanghai	408,281	8,275	$7,158
Total	475,290	29,251	7,158

FOOCHOW

Currency Stabilized on a Gold Basis

[From bullion letter of Samuel Montague & Co., London, January 22, 1930]

The anticipated stabilization upon a gold basis of the currency of Indo-China has now become effective. An official announcement gives the rate of stabilization as 10 francs to the piaster. The gold contents of the latter will thus be approximately equal to 9.09737 grains of fine gold (=$0.39179).

Decree of May 31, 1930, Fixes the Monetary Standard of Indo-China

[From Bulletin de Statistique, Paris, June, 1930]

Art. 1. The piaster, the monetary unit of the Indo-Chinese Union, is constituted by 655 milligrams of gold of a fineness of nine hundred-thousandths, or the equivalent of 10 francs, according to the definition of the law of June 25, 1928.

Art. 2. The Banque de l'Indochine is required to assure to the bearer and at sight the convertibility into gold of its notes. It assures this convertibility by exchanging its notes against gold at the rate of 655 milligrams of gold, of a fineness of nine hundred-thousandths fine, per piaster, either at Saigon or at Paris, at its choice, with deduction, in the latter case, of the cost of transportation and insurance from Saigon to Paris. The bank has the faculty of making these exchanges only for minimum quantities, which will be fixed by agreement between the Minister of the Colonies, on the one part, and the Banque de l'Indochine on the other part, the bank is required to buy gold at the wickets of its branch at Saigon on the basis of 1 piaster per 655 milligrams of gold, of a fineness of nine hundred-thousandths, and without retaining interest. It has the faculty of retaining from the vendor the cost of coinage at the rate charged by the Paris Mint. The cost of assay will be for the account of the vendor.

Art. 3. For the Saigon branch, the cumulated amount of bearer notes in circulation and of the current credit accounts must always be represented at least one-third by a reserve of gold bullion or currencies exchangeable at sight for gold coins or bullion.

Art. 4. Metallic piasters continue unlimited legal tender. The bank will accept, without limit, at its wickets in Indo-China, the metallic piasters presented to it. It will deliver them to the general Government, whose account will be debited with an equivalent amount in piasters.

Art. 5. All provisions contrary to the present decree are abrogated.

Laws Affecting the Currency

[From Supplement Colonial De L'Economiste Europeĕn, Paris, September 19, 1930]

By decree of August 12, 1930, the weight of the piaster was reduced from 27 to 20 grams, and its legal tender quality was made unlimited.

A future decree of the governor general will fix the date for the retirement of the present piaster by the public treasuries.

JAPAN, INCLUDING CHOSEN, TAIWAN, KARAFUTO, AND KWANTUNG

The domestic silver coinage executed in home mints during the year ended December 31, 1929, consisted of 12,568,000 50-sen pieces, having a face value of 6,284,000 yen ($3,132,574).

The amount of domestic silver coin withdrawn from monetary use for recoinage during 1929 was 3,140,000 yen ($1,565,290).

Estimated quantity of gold and silver used in the industrial arts during 1929, exclusive of Japan proper, for which there are no official data

COMMENT ON GOLD MOVEMENTS AND GOLD STOCKS SINCE EMBARGO REMOVAL

[From Foreign Financial News, U. S. Department of Commerce, February 20, 1931]

According to the Japan Financial and Economic Monthly for September, 1930, there was an efflux of specie totaling 217,000,000 yen between the removal, of the gold embargo on January 11, 1930, and July 31, 1930. The outflow occurred principally in the first few months, being greatly decreased in June and July. As to the amount of gold remaining in Japan, statistics are apparently lacking. When the embargo was removed the Bank of Japan had 1,073,333,000 yen. This declined to 867,503,000 yen on June 11 and thereafter increased to 882,429,000 on August 1. Actually, the number of notes presented for conversion into gold exceeded the net loss of gold by 35,000,000 yen. This difference is explained by transfers of Government gold to the bank, by purchases of newly mined Japanese gold, and by imports from China.

PERSIA

Persia's Foreign Currency Law Begins to Function

[From Vice Consul Henry S. Villard, Teheran. In Commerce Reports, April 28, 1930]

In pursuance of the provisions of the emergency law of February 25, 1930, controlling foreign currency transactions in Persia, the Council of Ministers designated as banks authorized to deal in foreign exchange the Imperial Bank of Persia, the National Bank of Persia, the Russo-Persian Bank, and the Ottoman Bank. The National Bank of Persia has been named as the Government's representative in the purchase of foreign exchange.

* * * * * * *

As the law now stands, in urgent cases drafts may be purchased from authorized banks for the importation of any goods up to 2,000 krans in value, but beyond that sum a written permit must be obtained from the inspection commission. If the goods to be imported are among those restricted or prohibited, permission either is withheld altogether or is granted upon convincing proof that an urgent necessity exists for the goods in question.

* * * * * * *

The representative of the ministry of economics will be named later. Already the commission has produced an improvement in foreign-exchange quotations, having arbitrarily fixed the buying rate for the dollar at 12.66 krans and the selling rate at 12.76½. The corresponding rates for the pound sterling are now 61.50 and 62.

* * * * * * *

At the moment interest centers in the uncertainties in regard to the position of the Imperial Bank of Persia. If, as seems probable, the gold standard is adopted and a new form of currency is issued, the present paper notes of the bank will have to be modified or discarded. It is estimated that the Imperial Bank has in circulation approximately 19,000,000 tomans of bank notes, secured by 15,000,000 tomans in silver. Under the terms of the concession held by the bank, the latter is authorized to issue toman notes or "any other form of currency that may be adopted," but among the provisions (dating from January, 1879) is one which binds the bank to adopt the gold standard within 10 years. In view of the bank's failure to do this, an important question that will have to be decided in this connection is whether gold will be substituted for the bank's present reserve of 15,000,000 tomans in silver.

Persia Adopts the Gold Standard

[From Commerce Reports, May 12, 1930]

The first step in the process of changing Persia's monetary system from the silver to a gold standard took place on March 18, 1930, when the Medjliss passed a law establishing the gold "reyal," containing 100 dinars, as the legal monetary unit. The same measure provides that beginning on March 21, 1930, the date on which the law becomes effective, the customs administration shall collect all duties on a gold basis. (See Commerce Reports, April 28, 1930, p. 255.)

The new money will consist of gold pieces in denominations of 1 pahlavi and one-half pahlavi, equivalent to 20 and 10 reyals, respectively; silver pieces in denominations of one-half reyal, 1 reyal, 2 reyals, and 5 reyals; nickel pieces in denominations of dinars, 10 dinars, and 25 dinars; and copper pieces of 1 dinar and 2 dinars. It is probable that 1 pahlavi will be worth £1, or approximately $5, thus making the reyal equal to about $0.25.

DESCRIPTION OF NEW CURRENCY

Specifications for the new currency stipulate that 1 reyal shall be equivalent in value of 0.3661191 grams of pure gold and that it shall contain 4.5 grams of pure silver; the Imperial Mint is obligated to coin from 1 kilo of silver, 222.222 one-reyal pieces.

The 20-reyal piece, or 1 pahlavi, will contain 7.322382 grams of pure gold and the mint is to convert 1 kilo of pure gold into 136.5675 one-pahlavi pieces. Similarly, the 10-reyal piece, or one-half pahlavi, must contain 3.661191 grams of pure gold; 273.135 of these pieces are to be made from 1 kilo of gold.

Pure silver to the amount of 2.25 grams is to be contained in the half reyal, 444.444 pieces of which shall be converted by the mint from 1 kilo of pure silver. In the 2-reyal pieces there are to be 9 grams of pure silver, and 111.111 of these pieces will be coined from 1 kilo thereof. The 5-reyal pieces, containing 22.5 grams, will be coined on the basis of 44.444 pieces to each kilo of pure silver.

Both the gold and silver coins are to contain nine-tenths of pure metal and one-tenth of copper. Provision is made for infinitesimal variations in weight.

Gold pieces are to carry on one side the name and profile of His Imperial Majesty the Shah and on the other the national coat of arms, the monetary value, and the year of coinage. Silver, nickel, and copper pieces will bear on one side the coat of arms; on the reverse the monetary value in prominently displayed figures and the year of coinage.

According to the provisions of the law, free coinage of gold is permitted, but the expense incurred must not surpass 10 reyals per kilo of gold. All coinage must take place at the Imperial Mint, and the right of coinage for silver, nickel, and copper pieces belongs exclusively to the Government. There is no obligation to accept as legal tender copper money above the sum of 2 reyals.

GOVERNMENT CONTROL OF CURRENCY

Tending to concentrate in Government hands even further the control of the currency, the National Bank of Persia is granted the sole right to purchase gold for the state at the established figure of 2,721.35 reyals per kilo. The National Bank, moreover, is made the official depositary for the proposed reserve consisting of gold bullion, specie, or drafts on countries where gold circulates freely. A monthly statement giving the condition of the reserve and the number of reyals issued, and signed by the director of the National Bank, by the Government inspector attached thereto, by the Treasurer General, and by a supervisor designated by the Medjliss, is to be published.

All duties and taxes accruing to the state—such as customs duties; revenue from the tea, sugar, tobacco, and opium monopolies; road taxes; and fees collected by Persian diplomatic and consular representatives abroad—are henceforth to be on a gold basis. As previously reported, the importation of gold is unrestricted, but its exportation, together with the import and export of silver, is prohibited.

A separate law embracing the details of abandoning the silver standard is contemplated, but coinage of the first reyal is expected to take place within six months.

PHILIPPINE ISLANDS

The total import of United States gold bullion during 1930 was 1,357 ounces, valued at 39,188 pesos ($19,594).

Financial Adjustment Act, 1930

Be it enacted by the King's Most Excellent Majesty, the Senate and the House of Assembly of the Union of South Africa, as follows:

1. (1) The Minister of Finance may, out of the moneys accounted for and paid over to him in terms of section 3 of the Pretoria mint act, 1919 (Act No. 45 of 1919), pay to any other State such portion of the profit derived from the manufacture, in the Pretoria branch of the royal mint, of silver and copper coin issued therefrom for use in such State, as may be agreed upon between the said minister and the government of such State.

(2) The payment during the financial year ended on the 21st day of March, 1930, by the Government of the Union, of the sum of £25,849, to the Government of Southern Rhodesia, as representing half of the profit on silver and copper coin manufactured at the Pretoria branch of the royal mint and issued therefrom prior to the 1st day of January, 1930, for use in Southern Rhodesia, is hereby validated.

2. (1) Notwithstanding anything contained in section 3 of the Pretoria mint act, 1919 (Act No. 45 of 1919), there shall be established a fund entitled the "Coinage fund," into which shall be paid annually one-half of the profit derived from the manufacture, at the Pretoria branch of the royal mint, of silver and copper coin issued for use in the Union and such portion of the profit on the manufacture of such coin issued for use in other States, as is not paid over to those States in terms of section 1.

(2) The moneys in the coinage fund shall be applied to meet—

(*a*) The expenses of recoinage of worn silver and copper coin issued by the Pretoria branch of the royal mint;

(*b*) Any deficits that may arise hereafter from the operations of such branch.

(3) The moneys in the coinage fund shall be deemed to be deposits within the meaning of the public debt commissioners act, 1911 (Act No. 18 of 1911).

(4) All withdrawals of moneys from the coinage fund shall be made only on the certificate of the treasury.

16. This act may be cited as the financial adjustments act, 1930.

Banking Supervision

By Banks Proclamation 1930, dated September 12 and effective October 1, 1930, banking was placed under supervision through a licensing, report, and examination system. Establishing, from profits, of a reserve fund of 25 per cent of paid-up capital is provided for; also maintenance of a cash reserve, consisting of gold bullion, gold or subsidiary coin, and bank notes of any other bank authorized to issue notes in the Territory, the cash reserve to amount to at least 10 per cent of the bank's demand deposits in the Territory and 3 per cent of its time deposits (including savings deposits). The circulating notes of a bank are limited to authorized amounts thereof, and the bank must deposit and maintain with the supervising agency securities equal in value to the full amount of such circulating notes. Bank notes are full legal tender (except for the issuing bank) so long as the issuing bank "continues on demand to pay its notes in full at the place at which they are expressed to be payable."

ZANZIBAR PROTECTORATE

Approximate stock of silver coin in home government treasuries and of government notes in circulation on December 31, 1930: Silver coin, 1,204,001 rupees ($439,460); notes, 2,394,815 rupees.

Imports of silver coin during 1930: From Great Britain and Northern Ireland, 1,500 rupees ($547); from France, 1,200 rupees ($438); from Austria, 3,750 rupees ($1,369); total imports, 6,450 rupees ($2,354).

OCEANIA

AUSTRALIA

Domestic gold and silver coinage executed in home mints during the year ended December 31, 1929

Denomination	Pieces	Value	
		Pounds sterling	*U. S. dollars*
Gold, sovereigns	2,043,344	2,043,344	9,943,934
Silver:			
Florins	300,000	30,000	145,995
Sixpences	712,000	17,800	86,624
Threepences	1,536,000	19,200	93,437
Total silver	2,548,000	67,000	326,056

The amount of domestic gold and silver coin withdrawn from monetary use for recoinage during 1929 was as follows: Gold, £14,608 ($71,090); silver, £162,131 ($789,010).

The estimated quantity of new gold and silver bullion used in the industrial arts during 1929 was as follows: Gold, 18,066 fine ounces, valued at £76,737 ($373,441); silver, 10,377 fine ounces, valued at £1,497 ($7,285).

The amount of gold and silver, in the form of old jewelry, etc., returned from industry to monetary use during 1929 was as follows: Gold, 4,602 fine ounces, valued at £19,550 ($95,140); silver, 284 fine ounces, valued at £25 ($122).

The total import of United States gold bullion during 1929 was 408 fine ounces, valued at £1,884 ($9,168).

Gold Control

By act of December 17, 1929, Governmental acquisition of gold held by persons, in exchange for Australian notes, was authorized, and the control of gold export was provided for.

Gold Bounty

[From Samuel Montagu & Co.'s Weekly Bullion Circular, London, April 2, 1930]

The following interesting extract is taken from the Financial News of March 26 last:

"Considerable interest attaches to the announcement that the Government of Australia has agreed to pay (for the next 10 years) a premium (£1 per fine ounce) on gold produced in the Commonwealth (in excess of the average of 1928 to 1930). This is the first time since the period 1921 to 1925 that a gold premium has existed, and the incidence of the bounty is of exceptional interest to Australian gold producers who for some years have been pressing for some such action on the part of the Government. The bounty or premium is the equivalent of the exchange rate, less 25 per cent."

[From the Engineering and Mining Journal, August 10, 1931, p. 131.]

The Australian gold-production bounty to be paid at the end of the year for production in excess of the average for the three years 1828–1930 has been reduced from £1 per ounce to £0.5 per ounce.

WORLD'S MONETARY STOCKS OF GOLD, SILVER, AND PAPER MONEY AT THE CLOSE OF THE YEARS 1929 AND 1930

The following compilations have been made from such data as are available—see page 132. The amount of gold and silver in circulation in many countries is not obtainable, and in some countries that held by private banks can not be given.

For the United States the figures given cover all domestic gold and silver coin, but only such bullion and foreign coins as owned by the Government and Federal reserve banks. All foreign coin which comes into possession of the Government is converted into bullion.

Population figures are principally from United States Commerce Yearbook, 1930.

Monetary stock of principal countries of the world, end of calendar year 1929

[1] In part held abroad either reported as earmarked (set aside and not included in the claimed assets of the holding institution, as opposed to being merely deposited abroad or representing a receivable balance) or considered to be earmarked by U. S. Federal Reserve Board experts.
[2] Includes some silver.
[3] Includes base metal coin.
[4] Estimated silver circulation included.
[5] Includes some gold.
[6] Prior year's figures.
[7] United States bank notes.
[8] United States Government notes.
[9] Exclusive of Canadian bank notes which are the principal circulating media.
[10] Panama coin only. In addition to this, there is circulating an unknown amount of silver.
[11] United States currency.
[12] Equivalent of old milreis; value of paper currency fixed at 4.567 paper milreis to the gold milreis ($0.1196) for payment of public dues.
[13] On Dec. 27.
[14] Exclusive of Spanish bank notes and British treasury notes.
[15] British currency.
[16] Includes platinum.
[17] Estimate.
[18] Incomplete.
[19] Fluctuates with the price of silver.
[20] Monetary standard not established.
[21] Mar. 21, 1930 (end of Persian year).
[22] Sarawak coin and notes; Straits coin and notes also circulate.
[23] June 30, 1929.
[24] May, 1930.
[25] Australian notes.
[26] In Trinidad dollars.
[27] Almost the entire amount held abroad.
[28] Paper peso currency legally convertible at 44% of face value.
[29] Including some gold and probably late metal coin.
[30] From United States mint interrogatories and/or published official sources.
[31] Includes, in addition to holdings of central banks and governments, holdings of other banks where authenticated.
[32] Data known to be incomplete.

Monetary stock of principal countries of the world, end of calendar year 1930 (subject to revision)

[1] From United States Mint interrogatories and/or published official sources.
[2] Includes, in addition to holdings of central banks and governments, holdings of other banks where authenticated.
[3] Data known to be incomplete.
[4] In part held abroad, either reported as earmarked (set aside and not included in the claimed assets of the holding institution, as opposed to being merely deposited abroad or representing a receivable balance) or considered to be earmarked by U. S. Federal Reserve Board experts.
[5] Gold and silver.
[6] Estimated silver circulation included.
[7] United States bank notes.
[8] United States Government notes.
[9] Prior year's figures.
[10] Exclusive of Canadian bank notes which are the principal circulating media.
[11] Panama coin only. In addition to this, there is circulating an unknown amount of silver.
[12] United States currency.
[13] In Trinidad dollars.
[14] June 30, 1930.
[15] Paper peso currency legally convertible at 44% of face value.
[16] Equivalent of old milreis; value of paper currency fixed at 4.567 paper milreis to the gold milreis ($0.1196) for payment of public dues.
[17] Includes base metal coin.
[18] On Jan. 2, 1931.
[19] Exclusive of Spanish bank notes and British treasury notes.
[20] Almost the entire amount held abroad.
[21] British currency.
[22] Includes platinum, etc.
[24] Incomplete.
[24] Fluctuates with the price of silver.
[25] Gold standard established by decree of May 1, 1930.
[26] Monetary standard not established.
[27] Estimate.
[28] Gold standard established by decree of Mar. 18, 1930; notes are stated in old krans.
[29] Mar. 21, 1930 (end of Persian year).
[30] Sarawak coin and notes; Straits coin and notes also circulate.
[31] May, 1930.
[32] Used also in Irish Free State.
[33] Australian notes.

WORLD PRODUCTION OF GOLD AND SILVER

World production of gold and silver, 1929 and 1930

[The production figures given below are based upon the preceding data (see p. 132) and those published in prior issues of the report of the Director of the Mint]

[1] Average price per fine ounce in London.
[2] Estimate based on United States imports of ore and bullion and interrogatory data.
[3] Estimate based on other years' production.
[4] Last year's figures.
[5] Amount exported.

Production of gold and silver in the world since 1860

[The annual production of 1860 to 1872 is obtained from 5-year-period estimates compiled by Dr. Adolph Soetbeer. Since 1872 the estimates are those of the Bureau of the Mint]

Calendar year	Gold		Silver	
	Fine ounces	Value	Fine ounces	Commercial value [1]
1860	6,486,262	$134,083,000	29,095,428	$39,337,000

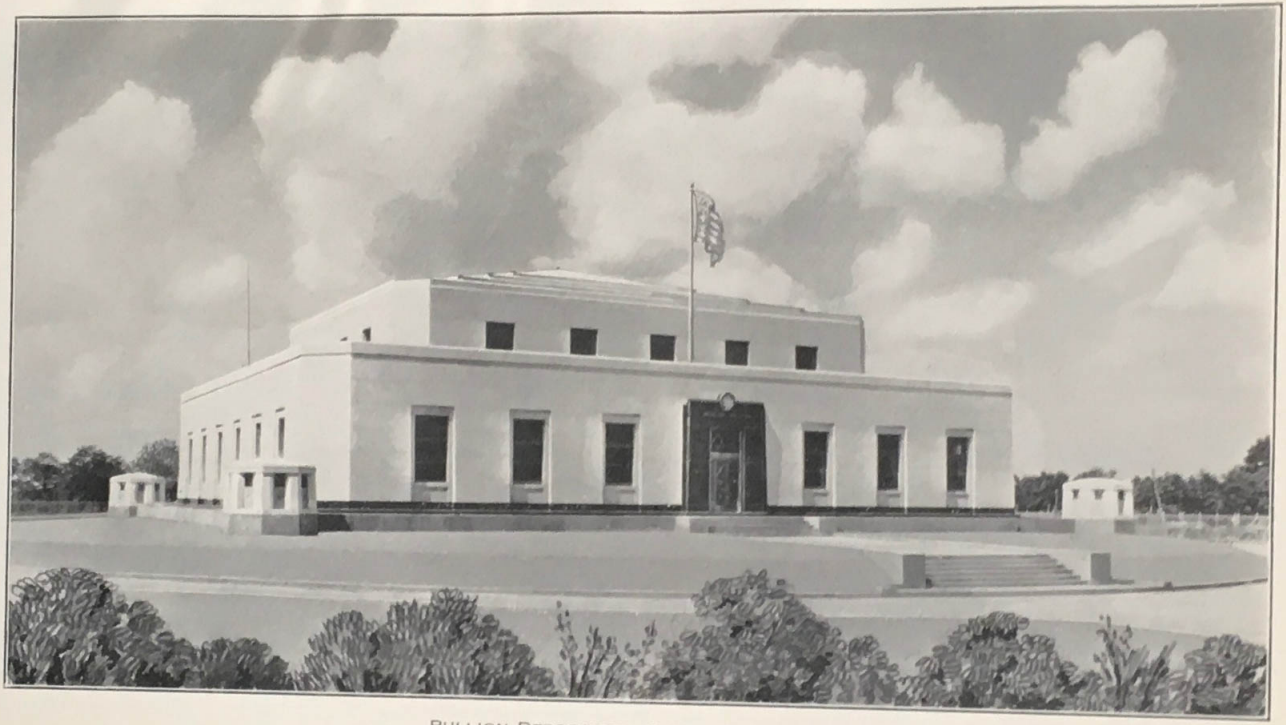
REPORT OF THE DIRECTOR OF THE MINT ON THE OPERATIONS OF THE MINT SERVICE FOR THE FISCAL YEAR 1937

REPORT OF THE DIRECTOR OF THE MINT ON THE OPERATIONS OF THE MINT SERVICE FOR THE FISCAL YEAR 1917



BULLION DEPOSITORY, FORT KNOX, KY.

ANNUAL REPORT OF THE DIRECTOR OF THE MINT

TREASURY DEPARTMENT,
BUREAU OF THE MINT,
Washington, D. C., October 12, 1937.

SIR: In compliance with the provisions of section 253, title 31, U. S. Code, I have the honor to submit herewith a report covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1937, being the Sixty-fifth Annual Report of the Director of the Mint. There is also submitted for publication in connection therewith the annual report of this Bureau upon the production and consumption of the precious metals in the United States for the calendar year 1936.

OPERATION OF THE MINTS AND ASSAY OFFICES

Institutions of the Mint Service

During the fiscal year ended June 30, 1937, the following seven mint institutions were in operation: Coinage mints at Philadelphia, San Francisco, and Denver; assay office at New York which handles the major portion of the gold imported and exported by the Government; a gold bullion depository at Fort Knox, Ky.; mint at New Orleans conducted as an assay office; and assay office at Seattle. The two last-named institutions are, in effect, bullion-purchasing agencies for the large institutions and also serve the public by making assays of ores and bullion. Electrolytic refineries are operated at the New York, Denver, and San Francisco institutions.

Coinage

Domestic coin manufactured during the fiscal year ended June 30, 1937, amounting to 760,915,737 pieces, exceeded the production of any previous fiscal year in the history of the Government. The nearest approach to this production was 733,583,150 pieces in the fiscal year 1920; during the fiscal year 1936, 471,040,986 pieces were produced. While the 1937 increase is reflected in every denomination of fractional coin, the greater part was in the 1-cent and 5-cent denominations. This may be attributed to the general improvement in business, including amusement, restaurant, chain- and department-store enterprises; also traffic in beverages, slot-machine vending, sales taxes, social-security deductions (in small amounts) from cash pay-roll disbursements, discontinuance of many small checking accounts, etc.

The 1937 total is made up of 177,783,212 pieces of subsidiary silver coin, 164,832,570 pieces nickel coin, and 418,299,955 pieces bronze coin.

The face value of the domestic coin manufactured totaled $45,386,895, consisting of $32,962,267 in subsidiary silver, $8,241,628 in nickel, and $4,183,000 in bronze coin.

Coinage for foreign governments amounted to 42,550,000 pieces, as compared with 72,180,449 pieces during the prior year. All foreign coinage, consisting of silver, nickel, and bronze coins for Cuba, Honduras, Nicaragua, Panama, and Venezuela, was executed at Philadelphia.

The grand total of domestic and foreign coin made in 1937 amounted to 803,465,737 pieces, an excess of 260,244,302 over that of the prior year.

Bullion Deposit Transactions

Bullion deposits during the fiscal year 1937 totaled 97,293. An amended method of reporting the number of deposits has of late been established. For purposes of comparison, the reports for fiscal years 1934, 1935, and 1936 have been brought into agreement with the amended procedure, the figures being, respectively, 113,773; 194,146; and 127,837.

Gold Operations

Gold acquisitions by the mints and assay offices during the fiscal year 1937 amounted to $1,762,927,432.65. Receipts of domestic and foreign coin from other Treasury offices, melted during the year, amounted to $149,676,113.44. Transfers from mint institutions to other mint institutions amounted to $5,846,821,665.90. These transactions total $7,759,425,211.99; in the prior year $2,549,171,816.51.

The acquisitions include $1,742,669.26 received at $20.67+ per fine ounce of gold, not previously surrendered under the nationalization orders. The increment on this gold, due to the increase of price to $35 per fine ounce, amounted to $1,207,897.48.

Silver Operations

The Government's acquisitions of silver during the fiscal year 1937 totaled 226,742,842 fine ounces, at an average cost of 55.8+ cents per fine ounce, and total cost of $126,609,299. The total consists of the following items:

	Fine ounces	*Cost*
Newly mined domestic silver	63, 029, 665	$48, 851, 604
Nationalized silver	63, 777	31, 911
Purchase Act silver	163, 030, 551	77, 453, 735
Silver contained in gold bullion deposits, etc	454, 301	199, 647
Silver received in exchange for Government stamped bars	164, 548	72, 402

United States coin received for recoinage totaled 3,994,323 fine ounces, with recoinage value of $5,521,788. Silver deposited in trust by other governments totaled 22,218,016 fine ounces. Silver transfers between mint-service institutions totaled 1,741,805 fine ounces. The above items total 254,696,986 fine ounces. The prior year's total was 626,488,597.

During the fiscal year 98,215,000 fine ounces of silver bullion were revalued to $1.29+ per fine ounce, in accordance with the act of June 19, 1934, defining the monetary value of silver, and was set up as security against silver certificates.

ADDITION TO MINT, DENVER, COLO.

Silver Price

The open-market price of silver in New York (mean of bid and asked) during the fiscal year 1937 averaged $0.45302. The highest point was $0.47812 on November 9 and 10, 1936; the lowest was $0.45062, which prevailed during most of the fiscal year.

For newly mined domestic silver the price of $0.7757+ per fine ounce, established by the President's proclamation of April 24, 1935, prevailed throughout the fiscal year.

Refineries

The electrolytic refinery at New York produced during the fiscal year 1937 electrolytically refined gold bullion totaling 3,351,715 fine ounces (114.9 tons), and silver bullion totaling 1,641,602 fine ounces (56.3 tons). During the prior year the quantities produced were 234.6 tons of gold and 156.2 tons of silver.

The electrolytic refineries at the Denver and San Francisco Mints remained closed because of building construction and the fact of other more urgent activities absorbing appropriations.

Stocks of unrefined gold and silver bullion in mint institutions increased during the fiscal year 1937 approximately 250 tons, making a total on hand of 1,315 tons. The increase in the fiscal year 1936 was about 56 tons.

Housing

The fiscal year 1937 marked the completion and the occupancy by the mint service, of the new mint building at San Francisco, the new wing to the mint at Denver, and the bullion depository at Fort Knox, Ky. Illustrations of these structures appear in this publication.

The new mint at San Francisco occupies a commanding site at Duboce and Buchanan Streets, which is some distance from the principal business center where the old mint building is located. The structure is three stories in height with a partial fourth story, and occupies an area of approximately 33,000 square feet. It is provided with modern facilities, and new equipment replaces much worn and obsolete machinery contained in the old building. Modern protective devices, alarm systems, and vaults are provided in the new building as well as an electric precipitator system which makes possible the recovery of fine gold and silver particles contained in smoke and gases generated in the working of the precious metals.

The addition to the Denver Mint building covers an area of approximately 6,000 square feet and consists of a basement and two stories. The old building was remodeled to some extent in connection with expansion and rearrangement of operating departments. Improvements in structure and equipment include modern protective devices, added vault facilities, new machinery and an electrical precipitator system.

The bullion depository at Fort Knox, Ky., occupies a site which was formerly included in the Army reservation. Gold bullion with value approximating 5½ billion dollars was shipped thereto during the last 6 months of the fiscal year 1937 from the assay office at New York and the mint at Philadelphia. The depository is equipped with the most sensitive and complete protective devices procurable.

At the Philadelphia Mint, modern vaults and new elevators have been constructed, and much worn and obsolete machinery has been replaced with modern equipment.

A silver bullion depository is now in course of construction on a site at West Point formerly included in the military reservation. This depository will be operated as an auxiliary of the New York Assay Office. It will be used for the storage of silver bullion now temporarily placed in the assay office at New York, the old assay office building at New York, the subtreasury building and in rented vaults.

Commemorative Coins

New design commemorative half dollars identified with historic events, made during the fiscal year 1937, are illustrated in this volume and described below:

Commemorative coins (half dollars) made

Occasion commemorated	Portrayals		Designer
	Obverse	Reverse	
Arkansas, statehood centennial.	1935 design unchanged	Portrait of Senator Joseph T. Robinson.	Henry Kreis.
Columbia, S. C., sesquicentennial of founding of capital.	Figure of Justice with scales and sword; replicas of original and present capitol buildings, with years 1786 and 1936.	Palm tree with oak log and ribbon binding spears at base; 13 stars in field around inner circle.	A. Wolfe Davidson.
Cincinnati, Ohio, fiftieth anniversary as music center.	Portrait of Stephen Foster, America's troubadour.	Symbolic female figure kneeling holding lyre; 1886–1936.	C. Ortmayer.
Long Island, N. Y., tercentenary of settlement.	Accolated heads of an Indian and a first settler.	Ship in full sail	Howard Weinman.
Great Lakes Exposition, Cleveland centennial.	Portrait of Moses Cleaveland.	Compass over map of Great Lakes; stars designating location of principal cities; 1836–1936.	Brenda Putnam.
New Rochelle, N. Y., two hundred and fiftieth anniversary of founding.	Full length figure of a man in Colonial dress leading a calf; settled 1688; incorporated 1899.	Modern interpretation of a fleur-de-lis; 1938.	Gertrude K. Lathrop.
Bridgeport, Conn., centennial of incorporation.	Portrait of P. T. Barnum; 1836–1936.	An eagle	Henry Kreis.
Delaware, tercentenary of Swedes landing.	Replica of Old Swedes Church, Wilmington.	Replica of sailing ship Kalmar Nychel; 1638–1938.	Carl L. Schmitz.
Wisconsin, centennial of Territorial government.	A badger against vertical arrows and branch.	Arm of man holding pick above a pile of ore; 1836–1936.	Benjamin Hawkins.
Lynchburg, Va., sesquicentennial of founding.	Portrait of Senator Carter Glass.	Standing figure of Liberty; replica of Lynchburg court house; 1786–1936.	Charles Keck.
Albany, N. Y., two hundred and fiftieth anniversary of founding.	Beaver with branch of maple; maple seeds separating wording around border.	Full length portrait of Sir Thomas Dongan, Colonial Governor, presenting a charter to Peter Schuyler, Albany's first mayor and Robert Livingston; flying eagle above; pine branch and cones.	Gertrude K. Lathrop.
Gettysburg, Pa., seventy-fifth anniversary of battle.	Accolated heads of Union and Confederate soldiers; Blue and Gray Reunion.	A fasces vertically in center flanked by shields of the Union and Confederacy, supported by sprays of oak and laurel; 1863–1938.	Frank Vittor.
Elgin, Ill., centennial of founding.	Head of a pioneer; 1673–1936.	Group of 4 pioneer figures; pioneer memorial; Elgin, Ill.	Trygve A. Rovelstad.
Roanoke Island, N. C., three hundred and fiftieth anniversary of colonization.	Portrait of Sir Walter Raleigh.	Full length figure of woman holding babe in arms; the birth of Virginia Dare; 2 sailing ships; a branch of pine; 1587–1937.	William Marks Simpson.

COMMEMORATIVE HALF DOLLARS.

1. Arkansas statehood centennial.
2. Columbia, S. C., sesquicentennial.

Commemorative coins (half dollars) made—Continued

Occasion commemorated	Portrayals		Designer
	Obverse	Reverse	
San Francisco-Oakland Bay Bridge opening.	Grizzly bear	View of bridge in perspective with historic Ferry Tower in foreground; Yerba Buena Island and East Bay Hills in distance; 1936.	Jacques Schnier.
York County, Maine, tercentenary of founding.	View of old stockade on the Saco River (Brown's Garrison).	Seal of York County; first county in Maine; 1636–1936.	Walter H. Reed.

Commemorative half dollar coins which have been authorized but not yet issued are as follows:

Event	Date of law	Pieces
Antietam, Battle of, Seventy-fifth anniversary	June 24, 1937	50,000
Norfolk, Va., three-hundredth anniversary of original land grant and two hundredth anniversary of the establishment of the city of Norfolk as a borough	June 28, 1937	25,000

Stock of Coin and Monetary Bullion in the United States

On June 30, 1937, the estimated stock of domestic coin in the United States was $1,056,932,925, of which $547,079,825 was standard silver dollars, $358,899,286 subsidiary silver coin, and $150,953,814 minor coin.

The stock of gold bullion, including coin, held in the Treasury on the same date was valued at $12,318,271,165, an increase of $1,709,854,487; the stock of silver bullion was 1,283,488,808 fine ounces, an increase of 206,623,606 fine ounces.

Production of Gold and Silver

Domestic gold production during the calendar year 1936 was 4,357,394 fine ounces with value $152,508,800, as compared with 3,609,283 fine ounces with value $126,324,900 in 1935. The output was about 89 percent in quantity of that for the record year 1915, when the total was 4,887,604 fine ounces, valued at $101,035,700.

Domestic silver produced during 1936 totaled 63,812,176 ounces, valued at $49,422,530 on the basis of the average price of newly mined domestic silver received by the Treasury, $0.7745 per fine ounce; this compares with 45,924,454 ounces, valued at $33,008,201, for 1935, and with the record production of 1915, 74,961,075 fine ounces, valued at $37,397,300.

Industrial Consumption of Gold and Silver

Gold consumption in the industrial arts during the calendar year 1936 is estimated at $32,967,937; the return from industrial use exceeded the total used by industry by $2,907,833 (a reversal of the usual condition). It is therefore considered that no new gold was added to industry's consumption.

Silver used in the arts is estimated at 35,842,674 fine ounces, of which 19,139,321 fine ounces was new material.

As compared with the prior year, there was a decline of silver consumption in industry of 5,300,000 ounces; and increase in gold consumption of approximately 201,000 ounces.

Appropriations, Expenses, and Income

Regular appropriations available for the mint service during the fiscal year 1937 totaled $1,295,660; the appropriation for meeting emergency expenses amounted to $1,050,000; the deficiency act of June 22, 1936, provided $2,030,000 for gold movements and special equipment; the public resolution of May 14, 1937, provided $262,500 for emergent expense; and reimbursements to appropriations for services rendered amounted to $376,899, making a total of $5,015,059.

Expenses amounted to $4,808,531, of which $4,657,840 was chargeable to appropriations and $150,691 chargeable to income.

The regular income realized by the Treasury from the mint service aggregated $34,040,896, of which $28,887,086 was seigniorage. The seigniorage on subsidiary silver coin was $17,982,473 and on minor coin $10,904,613. Extraordinary income taken into account consisted of seigniorage on silver bullion revalued to $1.29+ per ounce, $59,577,451, and increment to $35 per ounce on revalued gold, $1,207,897, total $60,785,348.

Deposits of Gold and Silver, Income, Expenses, and Employees, by Institutions, Fiscal Year 1937

The number and value of deposits, transfers, gross income, and expenses for the fiscal year 1937, and number of employees on June 30, 1937, at each institution are shown in the following table:

Institution	Number of deposits of gold and silver	Number of mint-service transactions	Monetary value of gold and silver receipts, including transfers [1]	Gross regular income [2]	Gross expenses [2]	Excess of income (+) or of expenses (−)	Employees June 30, 1937
Philadelphia	15,318	288	$207,456,084	$21,934,070	$1,395,887	+$20,538,183	468

Coinage by the United States for Other Countries

The coinage for other countries during the same period totaled 42,550,000 pieces, as compared with 72,180,449 pieces during the prior year, as follows:

Country	Philadelphia	Country	Philadelphia
Silver:	*Pieces*	Bronze:	*Pieces*
Cuba	20,000,000	Nicaragua	1,100,000
Honduras	2,500,000	Panama	200,000
Nicaragua	350,000	Total bronze	1,300,000
Venezuela	11,900,000	Total coinage	42,550,000
Total silver	34,750,000	Previous fiscal year, total coinage (3 mints)	72,180,449
Nickel:			
Nicaragua	300,000		
Venezuela	6,200,000		
Total nickel	6,500,000		

Mint Issue of Fine Gold Bars for Industrial Use

[On value basis; see p. 48]

The value of the fine gold bars issued for industrial use, in exchange for cash, by the United States mints at Philadelphia, San Francisco, and Denver, and the assay office at New York, during the fiscal year 1937, was as follows:

Month	Value of bars issued	Month	Value of bars issued
1936:		1937—Continued.	
July	$103,353.37	March	$38,708.60
August	34,531.52	April	95,354.87
September	40,233.95	May	57,771.00
October	99,692.81	June	37,035.68
November	44,333.08	Total	677,299.22
December	38,827.39	Prior fiscal year	568,728.40
1937:			
January	44,345.66		
February	43,111.39		

Receipts and Disbursements of Gold Bullion and Balances on Hand

Receipts and disbursements of gold bullion during the fiscal year 1937, and balances on hand June 30, 1937, as compared with June 30, 1936, are shown in the following table:

Institution	Balance on hand June 30, 1936	Receipts during fiscal year 1937 (details below) [1]	Total	Disbursements during fiscal year 1937 (details below) [1]	Balance on hand June 30, 1937

Minor Coins Outstanding

The following statement shows the coinage of minor coins, by denominations, the amount on hand at the mints, issued, melted, and outstanding June 30, 1937. Minor coins were first manufactured at the Philadelphia Mint in 1793, at the San Francisco Mint in 1908, and at the Denver Mint in 1911.

Item	Coined	On hand at mints unissued	Issued	Melted	Amount issued and outstanding June 30, 1937
Copper half cents [1]	$39, 926. 11		$39, 926. 11	$0. 80	$39, 925. 31
Copper cents	1, 562, 887. 44		1, 562, 887. 44	383, 446. 05	1, 179, 441. 39
Copper-nickel cents	2, 007, 720. 00		2, 007, 720. 00	809, 052. 41	1, 198, 667. 59
Bronze cents	68, 799, 383. 52	$1, 159, 773. 51	67, 639, 610. 01	1, 617, 602. 33	66, 022, 007. 68
Bronze 2 cents	912, 020. 00		912, 020. 00	343, 854. 74	568, 165. 26
Nickel 3 cents	941, 349. 48		941, 349. 48	287, 834. 04	653, 515. 44
Nickel 5 cents	94, 064, 897. 45	1, 292, 447. 60	92, 772, 449. 85	10, 292, 819. 15	82, 479, 630. 70
Total	168, 328, 184. 00	2, 452, 221. 11	165, 875, 962. 89	13, 734, 609. 52	152, 141, 353. 37

[1] There is no record of the melting of the old copper half cents, but it is believed that few, if any, are now in circulation.

Proof Bullion (1.000 fine)

In order to maintain uniformity in assay of bullion in the offices of the mint service, all proof gold and proof silver are made at one institution and furnished to other institutions when required. During the fiscal year 1937 the manufacture of proof gold was initiated at the New York Assay Office, while the Philadelphia Mint continues to supply all proof silver. During the fiscal year 1937 there was furnished other mints and assay offices 330 ounces of proof gold and 3,397.59 ounces of proof silver.

Operations of the Melting and Refining and of the Coining Departments, Fiscal Year 1937

The aggregate quantity of metals operated upon in the above-mentioned departments of the coinage mints and assay office at New York during the fiscal year ended June 30, 1937, was 57.0 million fine ounces of gold and 159.4 million fine ounces of silver. There were also operated upon at the coinage mints 149.8 million ounces of minor coinage metal. The figures in the table following are based on the figures obtained at the settlements of the accounts.

Legal limits of wastage on the whole amount delivered by the superintendent to operative offices, as prescribed in section 355, title 31, U. S. Code, are as follows: Melter and refiner—gold, 0.001; silver, 0.0015; coiner—gold, 0.0005; silver, 0.001.

Bullion Gains and Losses

The net gains from operations on gold and silver bullion during the fiscal year 1937 amounted to $176,379.29, as follows:

Item	Mint at—			Assay office at New York	Minor assay offices	Total
	Philadelphia	San Francisco	Denver			
Recovered from refining and coining operations	$40,581.58	$51,165.61	$16,376.23	$25,780.93		$133,904.37
Recovered incident to receipt of bullion deposits	6,179.02	4,682.34	724.98	25,003.47	$7,503.16	44,092.97
Gains on lightweight and mutilated coins received for recoinage	4.29	31.34	5.21	1.02		41.86

Wastage of Coinage Metal and Loss on Sale of Sweeps

The value of metals wasted in the operative departments during the fiscal year ended June 30, 1937, was $9,363.79. A loss of $2,114.05 occurred from the difference between the assay value of the bullion contained in sweeps sold and the amount received for the same. Details are given in the following table.

Item	Mint at—			Total
	Philadelphia	San Francisco	Denver	
Silver wastage:				
Coining department	$4,330.05		$81.78	$4,411.83
Nickel wastage:				
Melting and refining department	923.38	$119.57	289.70	1,332.65
Coining department	303.53	68.97	30.56	403.06
Bronze wastage:				
Melting and refining department	2,074.66	81.48	201.49	2,357.63
Coining department	818.57	11.60	28.15	858.32
Loss on sale of sweeps	622.31		1,491.74	2,114.05
Total wastage and loss	9,072.50	281.92	2,123.42	11,477.84
Reimbursements:				
Nickel and bronze wastage on domestic coin, from minor coinage profits	3,842.28	281.92	549.90	4,674.10
Silver departmental wastage offset by other departmental surpluses	4,330.05		81.78	4,411.83
Other wastages and loss on sweeps, from appropriations	900.17		1,491.74	2,391.91
Total reimbursements	9,072.50	281.92	2,123.42	11,477.84

[1] Conducted as assay office since 1910.
[2] Allotment made from a lump construction appropriation.

Assay Commission's Annual Test of Coin

Section 363, title 31, U. S. Code, provides for an annual test of the domestic coinage executed during each calendar year by a commission, of whom part are ex-officio members, the others being appointed, without compensation, by the President. The purpose is to secure a due conformity in the gold and silver coins to their respective standards of fineness and weight. The Commission, which met at the Philadelphia Mint, February 10, 1937, reported the following results of their examination of the 1936 coinage:

Your committee on counting reports that the packages containing the pieces reserved by the several mints for the trial of coins, in accordance with section 3539 of the Revised Statutes (Sec. 352, title 31, U. S. Code), were delivered to us by the Superintendent of the mint at Philadlephia, and upon comparison with the transcripts kept by the Director of the Mint were found to be correct. Several packages were selected from the deliveries of each month, from each mint, of all denominations coined, and the coins contained therein were counted and found to agree with the number called for in each package.

The committee on assaying has completed the assays on samples taken from different lots of coin representing all denominations coined during the year 1936 by the United States mints at Philadelphia, San Francisco, and Denver.

No gold was coined nor were any standard silver dollars struck at any of the mints during the year 1936.

The result of the assays upon coins and mass melts made from coins is very satisfactory, being well within legal limits of tolerance, which is three one-thousandths for silver coins.

The highest and lowest assays on individual silver coins selected were as follows:

	Thousandths
Highest assay on individual silver coins:	
Philadelphia Mint	900. 5
Denver Mint	901. 0
San Francisco Mint	900. 4
Lowest assays on individual silver coins:	
Philadelphia Mint	898. 6
Denver Mint	898. 6
San Francisco Mint	898. 6
Mass melts:	
Philadelphia Mint	899. 3
Denver Mint	899. 3
San Francisco Mint	899. 3

The committee on weighing reports that in accordance with the rules adopted by the Assay Commission in 1930 the committee received from the committee on assaying the residues of the several parcels of reserved coins, and took therefrom at random from the parcels of each mint such a number of coins of each of the denominations represented and so distributed by dates of coinage as to be sufficient for the purpose of weighing. Accordingly, 233 pieces were selected for weighing.

Each of these coins was weighed to the accuracy of 0.00 grain and the results recorded. The standards used were a set of sealed coin weights and a set of grain weights, delivered to the Commission from the Bureau of Standards, Washington, D. C., under seal and accompanied by certificates signed by the Director of the Bureau. The weighings were made by the method employed for this purpose. This balance was tested before the weighing of the coins was commenced and was found to be accurate and reliable and very well adapted for the work of the committee.

The maximum deviation from the standard, of the heaviest and the lightest coins of each denomination from each mint, is shown in the following table:

Items	Legal deviation allowed	Philadelphia		San Francisco		Denver	
		Heavy	Light	Heavy	Light	Heavy	Light
Silver coin:	*Grains*	*Grains*	*Grains*	*Grains*	*Grains*	*Grains*	*Grains*
Half dollars	1.5	1.18	1.06	0.77	0.83	1.18	0.94
Quarter dollars	1.5	.61	.91	.50	.51	.71	.84
Dimes	1.5	1.02	.35	.62	.51	.99	.58

The foregoing report, covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1937, is respectfully submitted.

NELLIE TAYLOE ROSS,
Director of the Mint.

Hon. HENRY MORGENTHAU, Jr.,
Secretary of the Treasury.

REPORT OF THE DIRECTOR OF THE MINT ON THE PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1936

REPORT OF THE DIRECTOR OF THE MINT ON THE PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1936

REPORT ON PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1936

INTRODUCTION

The official estimate of the production of gold and silver in the United States is made by the Bureau of the Mint with the cooperation of the Bureau of Mines, the latter making a mine canvass in each State and the former working backward from mint deposits through refineries, smelters, and other reduction works to the mine production estimate made by the former. The official estimate represents the material received at mint service offices and private refineries. The difference between this estimate and the mine production estimate is almost entirely due to the time element involved in the reducing processes, since differences for series of years are shown by comparison to practically offset each other. The two systems thus verify and support each other.

The gold production of the United States, including its insular dependencies, for the calendar year 1936 is estimated to have been 4,367,394 fine ounces, valued at $152,508,800, and the production of silver is estimated at 63,812,176 fine ounces, valued at $49,422,530. A comparison of these figures with those of 1935 indicates about 748,000 fine ounces increase in production of gold and approximately 17,900,000 ounces increase in silver production.

The output of the gold-producing States again increased in 1936. California, the largest producer, made the largest increase, about 178,000 ounces, to a total of about 1,049,000 ounces. Other large increases were made by Nevada, 111,000 ounces; Arizona, 102,000; Alaska, 55,000; Montana, 47,000; Utah, 45,000 and South Dakota, 22,000 ounces. The Philippine Islands, with an increase of over 151,000 ounces, exceeded all of the States in gold production except California.

Silver production also increased in all the large silver-producing States. Idaho with an increase of 4,500,000 ounces strengthened its position as the largest silver producer with a total output of over 14,800,000 ounces. Montana, with an increase of over 3,400,000 ounces moved into second place in output for the year, and Utah with an increase of about 2,600,000 ounces took third place. Other States with large increases were Arizona, nearly 2,800,000; Colorado, 1,500,000; Nevada, 1,100,000; and California with nearly 1,000,000 ounces.

A brief review of mining conditions, for which acknowledgments are made to the United States Bureau of Mines, follows. The production figures therein differ, as explained above, from the Bureau of the Mint production estimates. Further information concerning same can be obtained by those interested by addressing the Bureau of Mines at Washington.

ALASKA

The yield of gold from ores and gravels of Alaska in 1936 was 539,162.60 fine ounces, valued at $18,870,691 compared with 469,495 ounces valued at $16,432,325 in 1935, according to Charles W. Henderson of the United States Bureau of Mines. As there are no smelters or refineries in Alaska, most of the gold produced in 1936 was in the form of bullion sent to the United States mints and assay offices either direct by the operator or through banks in the various districts; the remainder was contained in high-grade ore and concentrates shipped to smelters at Tacoma, Wash., Selby, Calif., and Midvale, Utah. Floating dredges recovered 47 percent of the total gold output. Much the largest producer from this source was the United States Smelting, Refining & Mining Co., operating dredges in the Fairbanks and Nome districts. Other producers of a substantial quantity of gold by dredging were the American Creek Operating Co., Hot Springs district; Arctic Circle Explorations, Fairhaven district; Bartholomae Oil Corporation, Port Clarence district; Gold Placers, Inc., Circle district; J. R. Murphy, Fairbanks district; and New York Alaska Gold Dredging Co., Tuluksak-Aniak district. Gravels handled by dragline scraper in connection with sluicing plants, hydraulicking, and hand sluicing yielded about 18 percent of the total gold output.

The Alaska Juneau Gold Mining Co., operating the Alaska Juneau mine in southeastern Alaska, produced more than three-fourths of the total gold recovered from lode mines in the Territory in 1936. The company mined 4,366,800 tons of material with an average gross gold content of 0.0422 ounce per ton. Of the total mined, 1,904,754 tons were rejected in the sorting process and 2,462,046 tons were treated by amalgamation and flotation concentration. The bulk of the gold recovered was in the form of bullion. Other metals besides gold recovered in commercial quantities in the concentrates were silver and lead. Among other important producers from lode mines in 1936 were the Chichagoff Mining Co., Chichagoff; the Fern Gold Leasing Co., Wasilla; Hirsh-Chichagoff Mining Co., Kimshan Cove; Nabesna Mining Corporation, Chitina; Nukalaska Mining Co., Seward; and Willow Creek Mines, Inc., Luckyshot.

The output of silver in Alaska in 1936 was 427,592 fine ounces, valued at $331,170, of which more than half was contained in copper concentrates from Kennecott and Mother Lode Coalition copper mines at Kennecott. The remainder was a byproduct of lode and placer gold mining operations.

ARIZONA

The production of gold, silver, copper, lead, and zinc in Arizona in 1936 was valued at $56,116,940, an increase from $37,198,809 in 1935, according to C. N. Gerry and Paul Luff, of the United States Bureau of Mines. The ore mined in 1936 was more than double that in 1935 and there was a marked increase in the production of all metals. The increases in the value of gold, silver, and copper were notable and accounted for the majority of the increase in the value of the five metals.

The recoverable gold output from lode and placer mines in Arizona in 1936 was 310,000 fine ounces compared with 241,754.60 fine ounces

at $1,895,604 in 1935; the increase was 12 percent. Placer mines produced 65 percent of the gold and lode mines 35 percent. Almost one-half of the placer gold was recovered by floating dredges of the connected-bucket type, and dragline dredges recovered almost one-third of the placer gold. Other placer mining methods, in order of importance, were small-scale hand methods, hydraulic mining, dry-land dredging, and drift mining. Virtually all of the lode gold was recovered from dry gold ore. Grant, Baker, Josephine, and Jackson Counties were the leading producers of placer gold in 1936, and Baker County produced over one-half of the lode gold during the same year.

Oregon ores, gravels, and retreated tailings yielded 85,061 fine ounces of silver valued at $65,880 in 1936, compared with 110,285 ounces valued at $79,339 in 1935; the decreases were 23 percent in quantity and 17 percent in value. Baker County accounted for three-fifths of the silver production in the State and most of the rest of it came from Grant County; most of the silver was derived from dry gold ores but small quantities were recovered from copper ores and as a byproduct from gold placers.

SOUTH DAKOTA

Mines in South Dakota yielded 586,353.40 fine ounces of gold, valued at $20,522,369, and 144,448 fine ounces of silver, valued at $111,875 in 1936 compared with 567,230.20 ounces of gold, valued at $19,853,057, and 151,047 ounces of silver, valued at $108,565 in 1935, according to Charles W. Henderson and A. J. Martin, of the United States Bureau of Mines. In both years the silver was recovered as a byproduct of gold mining. The producing area in South Dakota is small, comprising only parts of the three southwestern counties—Custer, Lawrence, and Pennington—in the Black Hills region.

The largest gold-producing mine in South Dakota and in the United States is the Homestake mine, at Lead, Lawrence County, which has been producing almost continuously since 1876. In 1936 it produced 1,383,929 tons of ore; revenue from the sale of gold-silver bullion and a small quantity of assay laboratory slag was $19,506,534.78—$315,521.59 more than in 1935. Dividends paid in 1936 were $9,041,760. From 1876 to 1936 inclusive, this mine yielded bullion and concentrates that brought a cash return of $321,508,038 after freight, express, insurance, mint and smelter charges are deducted. This mine has paid $97,062,202 in dividends. At the end of 1936 the reserve of developed ore was 15,270,968 tons.

There were two other important gold-producing companies in South Dakota in 1936, both of which were in Lawrence County. One was the Bald Mountain Mining Co., at Trojan, and the other was the Canyon Corporation operating in the Maitland district. Of the remaining nine producing lode mines 2 were in Lawrence County and 7 were in Pennington County. Placer operations in the three counties yielded only 346.80 ounces of gold in 1936, compared with 936.86 ounces in 1935. The total production of gold and silver (in terms of recovered metals) in South Dakota from the beginning of production in 1875 to the end of 1936, as compiled by Charles W. Henderson, has been 17,055,717 fine ounces of gold and 8,530,474 fine ounces of silver.

TEXAS

All the gold and silver produced in Texas in 1936 came from lode mines. The output, in terms of recovered metals, was 613 ounces of gold, valued at $21,455, and 1,361,459 ounces of silver, valued at $1,054,450 compared with 518 ounces of gold, valued at $18,130, and 1,000,960 ounces of silver, valued at $719,440 in 1935, according to Charles W. Henderson and A. J. Martin of the United States Bureau of Mines. The Presidio silver mine of the American Metal Co. of Texas, in Presidio County, produced the bulk of the State output in both years, the gold (and some lead) having been recovered in relatively small quantity with the silver. The Plata Verde mine in Hudspeth County was a substantial producer of silver in 1936 from highly siliceous ore shipped to the copper smelter at El Paso from an open cut. The old Hazel mine in Culberson County and the Caruthers mine and a prospect in Hudspeth County were the other producing mines in 1936. The total production of gold and silver in Texas (in terms of recovered metals) from the beginning of production in 1885 to the end of 1936, compiled from all sources by Charles W. Henderson—mostly from the Presidio mine—has been 6,098 fine ounces of gold and 25,990,966 fine ounces of silver.

UTAH

The output of gold, silver, copper, lead, and zinc from mines in Utah in 1936 was valued at $48,836,356, an increase from $31,651,571 in 1935, according to C. N. Gerry and T. H. Miller, of the United States Bureau of Mines.

The gold output was 223,444.00 ounces, valued at $7,820,540, an increase from 184,759.80 ounces in 1935. It was slightly more than the average annual output (184,325.46 ounces) for the decade 1927 to 1936. Siliceous ore and old tailings (chiefly gold ore) yielded 80,360.86 ounces, copper ore 117,287.20 ounces, lead-zinc ore 19,732.68 ounces, and lead ore 5,901.86 ounces. Placers yielded only 161.40 ounces of gold, less than one-tenth of 1 percent of the State total. There was an increase of 49,597.41 ounces of gold recovered from copper ore and 1,261.61 ounces of gold from lead-zinc ore, but a decrease of 8,458.67 ounces from siliceous ore and 3,621.35 ounces from lead ore. A marked increase in gold output was made at the Utah Copper mine at Bingham, but decreases were reported from the United States & Lark mine at Bingham, the Park City Consolidated mine at Park City, and the Lewiston Peak mine at Mercur. These decreases were largely due to a metal-mine strike which closed many of the important producing mines in Utah for more than 2 months during the last quarter of 1936. The Liberty property of the Park City Utah Mines Co., the largest producer of gold in the Park City region in 1935, was closed during 1936 due to litigation. The leading producers of gold in Utah were the Utah Copper, United States & Lark, Eureka Standard, Lewiston Peak, Mammoth, Centennial Beck & Victoria, Boston Consolidated, and Utah-Delaware mines. These eight mines yielded 83 percent of the total gold produced in Utah in 1936.

The silver production in Utah increased from an output of 9,206,329 ounces in 1935 to 9,997,645 ounces in 1936. The output in 1936 was 88 percent of the average annual output (11,363,927 fine ounces) for the decade 1927 to 1936; the State ranked third in the United States as a silver producer, following Idaho and Montana. There were

increases in the production of silver from the three chief producing regions—Bingham, Park City, and Tintic. Separated as to source, the silver came principally from lead-zinc ore, which supplied 4,690,095 ounces, compared with 4,418,762 ounces in 1935, an increase of 271,333 ounces, largely from the West Mountain and Park City regions; lead ore supplied 1,155,961 ounces in 1936 compared with 1,029,525 ounces in 1935. Dry or siliceous ore yielded 3,090,029 ounces of silver; copper ore, 1,061,547 ounces; and placers, 13 ounces. First-class crude ore shipped to smelters yielded 4,243,192 ounces of silver, and ore concentrated yielded 5,749,046 ounces. The Tintic district in Juab and Utah Counties produced 2,787,321 ounces, against 2,664,729 ounces in 1935. The Bingham district, Salt Lake County, produced 3,753,539 ounces against 3,455,538 ounces in 1935, and the Park City region, Summit and Wasatch Counties, 2,708,949 ounces, against 2,500,256 ounces in 1935. The five largest producers of silver in Utah were the United States & Lark property at Bingham, the Tintic Standard mine at Dividend, the Silver King Coalition at Park City, the Utah Copper at Bingham, and the Park City Consolidated east of Park City. There were 199 producing mines, of which 171 were lode mines and 28 placers, compared with 203 lode mines and 31 placers in 1935.

WASHINGTON

The output of gold, silver, copper, lead, and zinc from mines in Washington in 1936 was valued at $1,015,771 compared with $394,041 in 1935, according to C. N. Gerry and T. H. Miller, of the United States Bureau of Mines.

The output of gold was 12,217.40 fine ounces, valued at $427,609; an increase from 9,739.60 fine ounces in 1935. Most of the gold output, 11,525.09 fine ounces or 94 percent, came from siliceous gold ores; placers yielded 657.20 fine ounces, or more than 5 percent of the gold. First-class ore of smelting grade—17,678 tons—came from mines in the Republic district, Ferry County, including chiefly the output of the Mountain Lion and Aurum mines. The largest gold producers in the State in 1936 were the Mountain Lion mine at Republic, the Bodie mine at Wauconda, and the Aurum property at Republic. Only 200 tons of gold ore were treated at the Boundary Red Mountain property in Whatcom County in 1936 on account of the failure of the power plant. Gold ore, however, was treated at the Azurite mine in the Slate Creek district of Whatcom County. Crude ore smelted—18,664 tons—yielded 6,241.84 ounces of gold; ore treated at gold and silver mills yielded 4,521.08 ounces of gold in bullion; and 797.28 ounces of gold were recovered from all kinds of concentrates.

The output of silver, chiefly from the Republic district, Ferry County, was 66,900 ounces, an increase of 14,562 ounces over 1935. Of the total silver, 48,064 ounces had its source in siliceous ore, 9,073 ounces in lead-zinc ore, 8,940 ounces in copper ore, 690 ounces in lead ore, and 133 ounces in placer dust and bullion. Crude ore supplied most of the silver or 42,771 ounces; concentrates, 19,424 ounces; and ore treated by amalgamation or cyanidation, 4,572 ounces. The four largest producers of silver, each producing more than 5,000 ounces, were the Mountain Lion at Republic, the Aurum mine also at Republic, the Royal near Chelan, and the Old Dominion near Colville. There were 44 lode mines and 106 placer mines producing in 1936, as compared with 63 lode mines and 172 placer mines

in 1935. The important features of 1936 were the reopening of the mine and mill of the Pend Oreille Mines & Metals Co., the production of copper ore at the Royal Development Co. in the Leavenworth district, and the plans for a new 1,000-ton mill at the Holden mine 50 miles from Chelan.

WYOMING

Lode and placer mines in Wyoming produced, in terms of recovered metals, 1,964.40 fine ounces of gold, valued at $68,754 in 1936 compared with 3,715 ounces valued at $130,025 in 1935, according to Charles W. Henderson and A. J. Martin, of the United States Bureau of Mines. The Atlantic City district, Fremont County, yielded nearly all the gold in 1936; the remainder (40.89 ounces) was contained in ore, amalgamation bullion, and placer dust shipped from scattered districts in Albany, Carbon, and Park Counties. The largest producers were the E. T. Fisher Co. and Jett-Ross Mines, Inc.; both operated placers equipped with dragline buckets and movable screening-sluicing-amalgamation plants. Gold recovered by these plants constituted 78 percent of the total State output in 1936.

The output of silver in 1936 was 1,113 fine ounces of which 839 ounces were produced from silver ore shipped from the Kirwin district, Park County, and 274 ounces were recovered as a byproduct of gold mining. The total production of gold and silver (in terms of recovered metals) in Wyoming from 1867 to 1936, inclusive, according to Charles W. Henderson, has been 73,515 fine ounces of gold and 73,766 fine ounces of silver.

Distribution of the gold and silver production of the United States, in fine ounces, for 1936, as to sources of production

[Table furnished by the Bureau of Mines]

State	Gold			Silver		
	Lode mines	Placer mines		Dry and siliceous ores [1]	Lead ores [2]	Copper ores
		Floating dredges	All other			
	Ounces	*Ounces*	*Ounces*	*Ounces*	*Ounces*	*Ounces*
Alabama	4,726			869		
Alaska	189,934	255,803	93,426	161,235	33	266,324

Washington	11,560		657	48,197	9,763	8,940
Wyoming	314		1,650	1,113		
Total [3]	2,873,682	608,773	298,792	26,372,762	17,334,771	17,388,287

[1] Contains small quantity of silver from placer mines (less than 110,000 ounces).
[2] Includes silver in lead, silver lead, zinc-lead, zinc and copper-lead ore.
[3] Philippine Islands and Puerto Rico excluded: Philippine Islands report 493,227 ounces of silver from lode mines and 1,517 ounces from placers; also 611,074 ounces of gold from lode mines and 10,894 ounces of gold from placers.

Refinery production (arrivals thereof) of gold mined in the several States and Territories in 1935 and 1936, with the increase and decrease in each for the latter year

[1] Gold valued in 1934 and thereafter at $35 per fine ounce; prior thereto at $20.67+ per fine ounce.
[2] Silver valued in 1934 and thereafter at Government's average buying price for domestic product; in 1934 at $0.64+ per fine ounce, in 1935 at $0.71875, in 1936 at $0.7745.

Gold and Silver Used in Industrial Arts in the United States During the Calendar Year 1936

Issue by the mints and assay offices of gold and silver for industrial-arts use has very substantially lessened since gold was revalued and a gold-handling charge imposed, and the supplying of industry by commercial refiners of those metals has substantially increased. Previously the principal source of gold supply to industry was the mint service institutions.

The following table gives the value of the gold and the quantity of the silver bars issued by the Government institutions and private refineries during the calendar year 1936, with the classes of material from which they were made.

Gold and silver issued for use in the industrial arts during the calendar year 1936 [1]

Items	Issued by—	Gold	Silver
		Value	*Fine ounces*
Bullion	Mints and assay offices	$722, 857	146, 477
Bullion in various forms	Private refiners and dealers	32, 245, 080	35, 618, 853
United States coin [2]	Banks, etc.		77, 344
Total		32, 967, 937	35, 842, 674
Old jewelry, plate, scrap, etc., contained in private refineries' and dealers' returns, and that returned to monetary use.		35, 875, 770	16, 703, 353
Net new material used in industry		2, 907, 833	19, 139, 321
Net return from industry			

[1] For explanation of calculation, see p. 48.
[2] Estimated; the quantity of silver is equal to 100,000 silver dollars.

Gold and silver furnished for use in manufactures and the arts, and classification of the materials used, since 1880

[1] Gold valued in 1934 and thereafter at $35 per fine ounce; prior thereto at $20.67+ per fine ounce.
[2] Treated as having priority as regards issue or reissue.

Mint Issue of Fine Gold Bars for Industrial Use

[On value basis; see p. 48]

The value of the fine gold bars issued for industrial use in exchange for cash by the United States mints at Philadelphia, San Francisco, and Denver, and the assay office at New York, during the calendar year 1936, was as follows:

Month	Value of bars issued	Month	Value of bars issued
1936:		1936—Continued.	
January	$83, 552. 65	September	$40, 233. 85
February	33, 044. 77	October	99, 692. 81
March	45, 221. 87	November	44, 333. 08
April	63, 509. 30	December	38, 827. 39
May	111, 017. 08		
June	55, 439. 55	Total	722, 857. 24
July	103, 353. 37		
August	34, 531. 52	Prior calendar year	383, 347. 12

ADDENDA TO REPORT OF THE DIRECTOR OF THE MINT

ADDENDA TO REPORT OF THE DIRECTOR OF THE MINT

Bases Used for Mint Service Statistics

Gold and silver, as well as minor coinage metals, are accounted for by quantity as well as by value. Most of the published mint service statistics pertaining to such metals are on a primary quantity basis rather than a primary value basis because, in some degree, the value factor antedates the quantity factor, as when advance partial payments are made on large deposits of bullion or foreign coin pending determination by melt, assay, and computation, of the exact quantities and values of the materials deposited. The *quantity basis* comprises received bullion, the quantity and value whereof have been finally determined, whether or not paid for; also melted coin that has been reviewed and classified after having been received as withdrawn from monetary use. The *value basis* comprises received bullion, the quantity and value whereof have been finally determined, whether or not paid for; also received bullion to the value of advance payments thereon prior to making final determinations; and received but unreviewed coin that has been withdrawn from monetary use. To effect reconciliation between the quantity basis and value basis, from period to period, would require consideration also of prior period advances.

The tabulations of "Deposits and purchases" include received metal for which payment is made in bars bearing the Government stamp, as well as that paid for by check or in cash. In these tabulations the receipt classification item of "Domestic refinery bullion" includes that refined from new production of both domestic and foreign mines, also old or secondary source metals, with inconsiderable amounts from small refineries that work only old materials.

Gold and silver production estimates.—These estimates consist of arrivals at United States mints and assay offices and at privately owned refineries (bullion-producing plants), of gold and silver from mines within the States and Territories of the United States, including the production of the Philippine Islands which comes to the United States for reduction. The portion of this figure representing mint receipts is on the quantity basis.

Gold and silver consumption in industry.—These estimates comprise bar sales by the mints and assay offices for industrial use (partly estimated) plus similar items issued by private refiners, dealers (and manufacturers), as reported to the Mint Bureau, plus an estimate of domestic coin melted for industrial use; from the total of these is deducted the old jewelry, plate, scrap, etc., received by the same concerns, giving net new materials consumed.

Stock of domestic coin.—Consists of an estimate made in 1873 of gold and silver coin, the former of which was revised in 1907, with annual addition of new coinage and reported imports, and deduction

of withdrawn coin, reported exports, and an estimate for industrial use; from 1928 to 1933 the additional factor of gold coin "earmarked," or set aside for foreign owners, was considered, such transactions being equivalent to exports and releases thereof being equivalent to imports. After 1933 gold coin has been omitted as such, since it was demonetized January 31, 1934; unmelted gold coin on hand is treated as bullion. In 1928 minor coin was added, using only the 5-cent nickel and 1-cent bronze coins of the type commonly in circulation and considering only the amounts coined and those withdrawn for recoinage. The monetary stock tables for a series of years have been revised back to the establishing of the Federal Reserve System (1914) to include earmarked gold, and to include minor coin back to 1900. The item of coin withdrawn as used in the stock compilation omits the coin received for recoinage but not yet reviewed, which coin is subject to classification adjustments.

Domestic coin made.—These data cover the coin delivered from the manufacturing department to the issuing (cash) division, and include the new coin made from withdrawn old coin, as well as all other newly made coin. It is now required that all coins be delivered to the cash division during the year impressed on such coins; during the earlier years this was not always done.

[1] Data for individual years published in reports of the Director of the Mint for 1931 and for prior years.

NOTE.—Net exports are shown with a prefixed minus sign. The quantities in the column "Net imports" for both gold and silver for the years 1873–74 to 1886–87 are estimated only, deducted from the declared values of the trade for those years by the following process:

For gold, the rupee value of the monthly net imports was converted into sterling at the average rate of exchange in each month, and this sterling value was then divided by the English mint price of gold (£3 17s. 10½d.). For silver the average price of 107 rupees per 100 tolas, or 285.33 rupees per 100 ounces, was taken as the basis of the value of the annual imports.

United States gold coin held in Canadian reserves since 1885

FOREIGN AND WORLD MONETARY STATISTICS

The statistics of foreign countries on production and coinage of gold and silver, and stocks of money, published annually in the reports of the Bureau of the Mint, are obtained, so far as practicable, directly from the governments of such countries by the representatives of the United States accredited to them.

Interrogatories covering the points on which information is sought are sent yearly to the United States Ambassadors and Ministers through the Department of State, and the replies in the form of reports, are forwarded directly to the Bureau of the Mint.

Receipts of replies to the interrogatories are frequently delayed in transmission and the available data for the calendar year under review are usually incomplete. In a general way interrogatory answers are herein published as received, with the addition of equivalents. If inaccuracies are apparent, information that would warrant the making of possible corrections is often unavailable.

In the absence of dependable official returns from foreign countries the most reliable data available are used in compiling world statistics

[1] At $35 per fine ounce of gold.
[2] At the average price of a fine ounce of silver in New York, $0.64582.
[3] In addition to these coins there were produced for circulation 6,590 silver mint bars "A" (of silver fineness, 0.999) and "B" (of silver fineness of coin. 0.880) each bar containing the same quantity of silver as 1,000 standard silver Yuan (dollars). The bars consumed 4,977,637 fine ounces of silver having a value (on basis of $0.64582 per fine ounce) of $3,214,658.

[1] At $35 per fine ounce of gold.

[2] At the average price of a fine ounce of silver in New York, $0.45399.

[3] There were produced for circulation 3,563 silver mint bars "B" (of silver fineness of coin, 0.880), each bar containing the same quantity of silver as 1,000 standard silver Yuan (dollars). The bars consumed 2,691,247 fine ounces of silver having a value (on basis of $0.45399 per fine ounce) of $1,221,799.

COIN, BOTH DOMESTIC AND FOREIGN, WITHDRAWN FROM MONETARY USE BY VARIOUS COUNTRIES OF THE WORLD DURING THE CALENDAR YEARS 1935 AND 1936

REVISIONS, 1935 MONETARY STOCKS

Principal revisions of monetary stocks for 1935, published in last year's volume, give:

Albania's total silver stock (including that in circulation) as $327,000 instead of $4,000.

Australia's total gold stock as $3,461,000 instead of $4,376,000; total silver stock as $72,394,000 instead of $67,055,000.

Belgium's total gold stock as $610,413,000 instead of $585,988,000.

Chile's silver stock as none instead of $3,851,000.

Danzig's silver stock as none instead of $1,385,000.

Denmark's silver stock as none instead of $1,089,000.

Ecuador's total silver stock as $51,000 instead of $236,000.

Greece's total gold stock as $30,149,000 instead of $32,553,000.

India's, British, paper circulation as 1,709,761,000 rupees instead of 1,720,509,000.

Venezuela's total gold stock as $66,038,000 instead of $42,836,000; total silver stock (including that in circulation) as $34,311,000 instead of $26,679,000; paper circulation as 114,245,000 bolivars instead of 101,589,000.

West Indies', British, Trinidad, paper circulation as $1,781,000 instead of $2,781,000.

West Indies', Netherland, total gold stock as $3,269,000 instead of $3,319,000; total silver stock as $187,000 instead of $237,000, paper circulation as 4,331,000 instead of 4,640,000.

WORLD'S MONETARY STOCKS OF GOLD, SILVER, AND PAPER MONEY AT THE CLOSE OF THE YEAR 1936

The following compilations have been made from answers to official questionnaires of the United States Mint Bureau, central bank reports, and other official sources, except as indicated by footnote one. It is understood that material amounts of gold are not reported by several countries, such as amounts held in secret funds for stabilizing currencies and those hoarded or held outside of regularly reported stocks. The amount of silver in circulation in many countries is not obtainable.

For the United States the figures given cover all monetary gold, monetized silver bullion, and domestic silver coin. All foreign coin which comes into possession of the Government is converted into bullion.

Population figures are principally from the Statistical Yearbook of the League of Nations, 1936–37.

Monetary stock of principal countries of the world, end of calendar year 1936 (subject to revision)

[Stated in United States money (000 omitted), except paper circulation, which is stated in monetary unit of issuing country (000 omitted). $1=15\frac{5}{21}$ grains of gold 9/10 fine; i. e. an ounce of fine gold=$35.] Population (000 omitted)

See footnotes on p. 100.

[1] Data used from other than official sources: Australia, paper currency data from Australian Insurance and Banking Record, Mar. 22, 1937. Belgium, silver data from Bulletin de Statistique, January 1937. French West Africa, paper currency data from Supplement Colonial de L'Economiste Européen, Jan. 15, 1937. Great Britain, paper currency data from The Statist, May 8, 1937. Guiana, French, paper currency data from Supplement Colonial de L'Economiste Européen, Feb. 19, 1937. Reunion Island, gold stock and paper currency data from Supplement Colonial de L'Economiste Européen, Feb. 19, 1937.

[2] Exchange rates have been given insofar as obtainable; in some cases they are nominal.

[3] Bases used for conversions of gold holdings to United States dollars: Algeria, reported in old French francs (United States equivalent, $0.0065); see "France" below for devaluation of the franc on Oct. 1, 1936. Argentina, reported in paper pesos which were revalued May 31, 1935 (United States equivalent, $0.3296). Austria, revaluation of December 1936, at 0.16733 grams of fine gold per schilling (United States equivalent, $0.1883). Bolivia, reported in fine ounces. Canada, holdings of Government Treasury converted at legal parity, holdings of Bank of Canada converted at average exchange rate of Canadian dollar during December 1936. Colombia, reported in fine ounces and United States dollars. Ecuador, revaluation of June 13, 1936, at rate of 11.6466 sucres per gram of fine gold (United States equivalent, $0.0666). Finland, gold holdings earmarked abroad reported in fine ounces. France, law of Oct. 1, 1936, provided for new gold content of franc to be fixed within limits of 43 and 49 milligrams of gold .900 fine; gold holdings of the Bank of France revalued at 49 milligrams of gold .900 fine (United States equivalent, $0.0496). Greece, bullion reported in fine ounces, coin reported in number of pieces held of gold dollars, francs, pounds, etc. Indochina, French piaster has a par value of 10 French francs; see "France" above for devaluation of the franc on Oct. 1, 1936. Latvia, law of Sept. 28, 1936, pegged the lat to sterling at 2,822 lati to £100; gold holdings converted on the basis of the exchange rate of sterling on Dec. 31, 1936 (United States equivalent of the lat, $0.1946). Mexico, reported in fine kilograms. Portuguese East Africa, reported in English pounds. Rumania, revaluation Nov. 6, 1936, at the rate of 153,333.33 lei per kilogram of fine gold (United States equivalent $0.0073). Salvador, reported in paper colons which were revalued June 1934 (United States equivalent, $0.50). Switzerland, Order of Federal Council enacted Sept. 27, 1936, instructed the Swiss National Bank to maintain the gold parity of the Swiss franc at a value ranging between 190 and 215 milligrams of fine gold; gold holdings of the Swiss National Bank revalued at 135 percent of their former parity (United States equivalent, $0.2419). Turkey, reported in fine kilograms.

[4] Net issues of silver coin since 1858 and silver bullion in the Bank of Canada.

[5] On Mar. 31, 1935.

[6] Prior years' figures at new equivalents where equivalents other than the legal parity are applicable.

[7] Average exchange rate for 1936.

[8] United States coin and currency also circulate.

[9] United States currency is circulating media.

[10] United States silver coin.

[11] Silver converted to United States equivalent at legal rate.

[12] Net issues of silver coin.

[13] Exclusive of Canadian bank notes, which are the principal circulating media.

[14] Estimated.

[15] Silver in circulation not included.

[16] On June 30, 1936.

[17] Includes base metal coin.

[18] On Dec. 24, 1936.

[19] Spanish bank notes and coin also circulate.

[20] The British Exchange Equalization account held $934,000,000 of gold on Mar. 31, 1937 in addition to that reported above, per Federal Reserve Bulletin, November 1937.

[21] Exclusive of British coins and currency which still circulate in the Irish Free State.

[22] On August 1, 1936.

[23] Data omitted because of indefiniteness or unavailability.

[24] Decree issued by Council of Commissars Oct. 28, 1936, fixed value of the ruble (10 rubles equivalent to one chervonetz) in foreign exchange at 4½ French francs.

[25] Incomplete.

[26] Silver standard abandoned by decree of Nov. 3, 1935; exchange rate for yuan fixed initially at about 1s. 2⅛d. British currency (United States equivalent about $0.2950).

[27] Fluctuates with the price of silver.

[28] Silver valued at United States equivalent of the price of silver in London on Dec. 31, 1936 ($0.47148 per fine ounce).

[29] Includes 639,896 British sterling paper converted to escudos at 111.89 to the pound.

[30] Gold and silver.

[31] Includes notes in circulation in Northern Rhodesia and in Nyasaland.

[32] Australian coins and notes are the circulating media.

WORLD PRODUCTION OF GOLD AND SILVER

[The production figures given below are based upon the unpublished data, principally interrogatory replies, in the files of the Bureau of the Mint]

[1] Average price per fine ounce in New York.
[2] Estimate based on United States imports of ore and bullion and interrogatory data.
[3] Amount exported.
[4] Estimate based on other years' production.
[5] Prior years' figures.
[6] Including production for Portugal.
[7] Fiscal year ended June 30.
[8] Conjectural.

Production of gold and silver in the world since the discovery of America

[From 1493 to 1885 is from a table of averages for certain periods, compiled by Dr. Adolph Soetbeer; for the years since, the production is the annual estimate of the Bureau of the Mint]

Period	Gold				Silver				Percentage of production			
	Annual average for period		Total for period		Annual average for period		Total for period		By weight		By value	
	Fine ounces	Value	Fine ounces	Value [1]	Fine ounces	Commercial value [1]	Fine ounces	Commercial value [1]	Gold	Silver	Gold	Silver
1493–1520	186,470	$3,855,000	5,221,160	$107,991,000	1,511,050	$2,085,249	42,309,400	$58,386,972	11.0	89.0	64.9	35.1

REPORT OF THE DIRECTOR OF THE MINT ON THE OPERATIONS OF THE MINT SERVICE FOR THE FISCAL YEAR 1940

REPORT OF THE DIRECTOR OF THE MINT ON THE
OPERATIONS OF THE MINT SERVICE
FOR THE FISCAL YEAR 1910

ANNUAL REPORT OF THE DIRECTOR OF THE MINT

TREASURY DEPARTMENT,
BUREAU OF THE MINT,
Washington, D. C., September 3, 1940.

SIR: In compliance with the provisions of section 253, title 31, United States Code, I have the honor to submit herewith a report covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1940, being the Sixty-eighth Annual Report of the Director of the Mint. There is also submitted for publication in connection therewith the annual report of this Bureau upon the production and consumption of the precious metals in the United States for the calendar year 1939.

OPERATION OF THE MINTS AND ASSAY OFFICES

Institutions of the Mint Service

During the fiscal year ended June 30, 1940, seven mint institutions were in operation: Coinage mints at Philadelphia, San Francisco, and Denver; assay office at New York, which handles the major portion of the gold imported and exported, and its auxiliary silver bullion depository at West Point; gold bullion depository at Fort Knox, Ky.; mint at New Orleans, conducted as an assay office; and assay office at Seattle. The two last-named institutions are, in effect, merely bullion-purchasing agencies and also serve the public by making assays of ores and bullion. Electrolytic refineries are maintained at the New York, Denver, and San Francisco institutions.

Coinage

Domestic coin manufactured during the fiscal year ending June 30, 1940, amounting to 768,090,830 pieces, exceeded the production of any previous fiscal year in the history of the Government. The nearest approach to this production was 760,915,737 pieces in the fiscal year 1937; and during the fiscal year 1920, 733,583,150. As in previous years, the coin most largely produced was the 1-cent piece. The production in 1940, in amount $39,994,684, consisted of 151,-918,730 subsidiary silver coins, $26,807,671; 175,632,300 nickel coins, $8,781,615; and 440,539,800 bronze coins, $4,405,398.

Coinage for foreign governments amounted to 35,695,000 pieces, compared with 48,187,200 pieces during the prior year. The foreign coinage consisted of silver, nickel and bronze coins for the Dominican Republic, El Salvador, Indo-China, Nicaragua, and Panama.

The grand total of domestic and foreign coins made in 1940 amounted to 803,785,830 pieces, an increase of 500,032,370 over the prior year.

Bullion Deposit Transactions

The number of bullion deposit transactions during the year totaled 51,780, including 75 inter-mint-service transactions, as compared with 54,028 and 272, respectively, during the prior year. The deposit transactions required 81,425 assay determinations, which compares with 91,506 assay determinations during the prior year.

Transfer of Bullion for Long-Term Storage

During the year 257,992 bars containing 271,279,924 fine ounces of silver were transferred from the New York Assay Office to the silver bullion depository at West Point, N. Y., for long-term storage. The depository now contains a total of 1,440,724,712 fine ounces of silver bullion, all of which was transferred from Government buildings and rented quarters in New York City since completion of the depository in 1938.

Refined gold bullion having a value of approximately $113,000,000 was transferred during the fiscal year 1940 from the mint at San Francisco, Calif., to the mint at Denver, Colo., for long-term storage.

Gold Operations

Gold acquisitions by the mints and assay offices during the year, stated on the usual basis of classified melted receipts, amounted to $3,085,599,168; receipts from other Treasury offices of domestic coin melted during the year amounted to $759,917; and transfers between mint-service institutions amounted to $148,708,148. These transactions total $3,235,067,233, compared with $3,304,841,002 for the prior year.

The acquisitions include $117,506 of gold received at $20.67+ per fine ounce. The increment on this gold amounted to $81,329.

In addition to the above, the gold on hand awaiting melting was in unusually large volume, the advance payments thereon totaling $622,583,897, as compared with $83,766,500 at the end of the preceding fiscal year.

Silver Operations

The Government's acquisitions of silver during the year totaled 259,135,270 fine ounces, at an average cost of 46.9 cents per fine ounce and a total cost of $121,706,914. The acquisitions consist of the following:

Item	Amount (fine ounces)	Cost
Newly mined domestic silver	62,544,502	$43,237,977
Purchase Act, silver	195,824,132	78,207,206
Silver contained in gold-bullion deposits, etc.	322,652	109,363
Silver received in exchange for Government-stamped bars	443,984	152,368
Total	259,135,270	121,706,914

United States coin received for recoinage totaled 2,991,528 fine ounces, with a recoinage value of $4,135,515. Silver transfers between mint-service institutions totaled 142,618 fine ounces. These items plus the silver acquired during the year brought the total transactions

in silver to 262,269,416 fine ounces, compared with the prior year's total of 435,167,479.

During the year 1940, $122,576,161 of silver certificates were issued against 94,805,000 fine ounces of silver bullion valued at $1.29+ per fine ounce, the statutory monetary value of silver. Such silver had been acquired at an average price of 57.7+ cents per ounce. The difference between the cost of the silver held to secure such certificates and the monetary value of such silver is $67,791,863, and this amount constitutes seigniorage.

The open-market price of silver in New York (mean of bid and asked) during the fiscal year 1940 averaged $0.35484. The highest point was $0.40062, which prevailed on August 25, 1939; the lowest was $0.35062, which prevailed during most of the fiscal year.

For newly mined domestic silver a return to the depositor of $0.7111+ per fine ounce, established by the act of July 6, 1939, prevailed for silver mined after July 1, 1939. For silver mined July 1, 1939, the price paid was $0.6464+ per fine ounce.

Refineries

The electrolytic refineries produced during the year 5,060,586 fine ounces (173.5 tons) of electrolytically refined gold bullion and 2,253,971 fine ounces (77.3 tons) of silver bullion. During the prior year the quantities produced were 5,588,913 fine ounces (191.6 tons) of gold and 3,459,089 fine ounces (118.6 tons) of silver.

Stocks of unrefined gold and silver bullion in mint institutions increased during the fiscal year 1940 by approximately 309 tons, to 2,073 tons. The increase in 1939 was about 175 tons.

New Design Coins

No new design coins and no commemorative design coins were initially issued during the fiscal year 1940.

The act of August 5, 1939, prohibited the issuance subsequent thereto of any commemorative coins authorized prior to March 1, 1939.

Correction.—In the preceding issue of the annual mint report it was erroneously stated that a proposal which had been under consideration in the Congress for establishing a Commemorative Coin Commission had become law on August 7, 1939. The proposal did not receive congressional sanction.

Stock of Coin and Monetary Bullion in the United States

On June 30, 1940, the estimated stock of domestic coin in the United States was $1,123,248,833, of which $547,078,223 was standard silver dollars, $402,261,461 subsidiary silver coin, and $173,909,149 minor coin.

The stock of gold bullion, including coin, held in the Treasury on the same date was valued at $19,963,090,869, an increase of $3,853,011,956, and the stock of silver bullion was 2,365,169,174 fine ounces, an increase of 242,216,494.

Production of Gold and Silver

Domestic gold production during the calendar year 1939 was 5,611,171 fine ounces, with a monetary value of $196,391,000, compared with 5,089,811 fine ounces, with a monetary value of $178,143,400, in 1938, which was the previous year of largest production.

Domestic silver production during the calendar year 1939 totaled 65,119,513 ounces. This compares with 62,665,335 ounces for 1938 and with the record production of 74,961,075 fine ounces for 1915.

Industrial Consumption of Gold and Silver

Gold consumption in the industrial arts during the calendar year 1939 is estimated at $38,788,960. Gold returned from industrial use amounted to $31,328,360. These items give a net industrial consumption of new gold during the year of $7,460,600, compared with a net return from industry of $324,081 during the calendar year 1938.

Silver used in the arts is estimated at 69,585,265 fine ounces, of which 44,613,005 fine ounces were new material.

Compared with the prior year, there was an increase in gold consumption of approximately 246,000 ounces and an increase in silver consumption in industry of about 30,900,000 ounces.

Appropriations, Expenses, and Income

Regular appropriations available for the mint service during the fiscal year 1940 totaled $2,349,500; the Deficiency Act of April 6, 1940, provided an additional amount of $306,000, and reimbursements to appropriations for services rendered amounted to $113,552, making a total of $2,769,052.

Expenses amounted to $2,783,988, of which $2,646,247 was chargeable to appropriations and $137,741 chargeable to income.

The regular income realized by the Treasury from the mint service aggregated $30,166,882, of which $24,883,675 was seigniorage. The seigniorage on subsidiary silver coin was $13,837,575, and on minor coin, $11,046,100. Extraordinary income aggregated $67,873,192, of which $67,791,863 was seigniorage on silver bullion revalued to $1.29+ per ounce, and $81,329 was the increment to $35 per ounce on revalued gold.

General Activities

The number and value of deposits, transfers, gross income, and expenses for the fiscal year 1940, and number of employees on June 30, 1940, at each institution are shown in the following table:

Deposits of gold and silver, income, expenses, and employees, by institutions, fiscal year 1940

Institution	Number of bullion deposit transactions	Number of assay determinations on bullion deposits	Monetary value of gold and silver receipts, including transfers [1]	Gross regular income	Gross expenses	Excess of income (+) or of expenses (−)	Employees, June 30, 1940
Philadelphia	6,640	9,539	$45,101,983	$19,171,974	$1,029,875	+$18,142,099	350

Domestic Coinage

Details of the coinage executed during the fiscal year ended June 30, 1940, follow:

Denomination	Philadelphia	San Francisco	Denver	Total value	Total pieces
Silver:					
Half dollars	$3,710,040.00	$1,396,000.00	$1,732,600.00	$6,838,640.00	13,677,280
Quarter dollars	8,287,476.75	657,000.00	1,297,000.00	10,241,476.75	40,965,907
Dimes	6,734,054.30	1,054,000.00	1,939,500.00	9,727,554.30	97,275,543
Total silver	18,731,571.05	3,107,000.00	4,969,100.00	26,807,671.05	151,918,730
Minor:					
5-cent nickel	7,570,015.00	626,500.00	585,100.00	8,781,615.00	175,632,300
1-cent bronze	3,568,998.00	642,800.00	193,600.00	4,405,398.00	440,539,800
Total minor	11,139,013.00	1,269,300.00	778,700.00	13,187,013.00	616,172,100
Total coinage	29,870,584.05	4,376,300.00	5,747,800.00	39,994,684.05	768,090,830
Prior year:					
Total coinage, value	$11,005,013.64	$1,845,208.00	$2,688,156.50	$15,538,378.14	
Total coinage, pieces	185,858,831	26,827,116	42,880,313		255,566,260

Coinage by the United States for Other Countries

The coinage for other countries during the fiscal year 1940 totaled 35,695,000 pieces, as compared with 48,187,200 pieces during the prior fiscal year, as follows:

Country	Philadelphia	San Francisco	Total
	Pieces	*Pieces*	*Pieces*
Silver: Dominican Republic	325,000		325,000
Nickel:			
Dominican Republic	200,000		200,000
El Salvador	2,300,000		2,300,000
Indo-China		25,270,000	25,270,000
Nicaragua	800,000		800,000
Panama	1,200,000		1,200,000
Total nickel	4,500,000	25,270,000	29,770,000
Bronze:			
Dominican Republic	2,000,000		2,000,000
Nicaragua	2,000,000		2,000,000
Panama	1,600,000		1,600,000
Total bronze	5,600,000		5,600,000
Total coinage	10,425,000	25,270,000	35,695,000
Prior fiscal year, total coinage	48,187,200		48,187,200

Mint Issue of Fine Gold Bars for Industrial Use

(On value basis; see p. 48)

The value of the fine gold bars issued for industrial use, in exchange for cash, by the United States mints at Philadelphia, San Francisco, and Denver, and the assay office at New York, during the fiscal year 1940, was as follows:

Month	Value of bars issued	Month	Value of bars issued
1939:		1940—continued	
July	$15,698.80	March	$31,683.94
August	7,262.92	April	15,679.55
September	23,319.70	May	22,682.92
October	120,196.79	June	23,711.03
November	17,637.19		
December	8,102.86	Total	335,665.41
1940:			
January	27,655.72	Prior fiscal year	244,604.29
February	22,133.99		

Receipts and Disbursements of Gold Bullion and Balances on Hand

Receipts and disbursements of gold bullion during the fiscal year 1940, and balances on hand June 30, 1940, as compared with June 30, 1939, are shown in the following table:

Institution	Balance on hand June 30, 1939	Receipts during fiscal year 1940 (details below) [1]	Total	Disbursements during fiscal year 1940 (details below) [1]	Balance on hand June 30, 1940
Philadelphia	$10,314,770.97	$4,561,485.59	$14,876,256.56	$8,430,623.62	$6,445,632.94
San Francisco	968,006,948.18	449,837,081.17	1,417,844,029.35	113,236,097.43	1,304,607,931.92
Denver	3,942,926,960.44	175,607,740.35	4,118,534,700.79	32,243.61	4,118,502,457.18

[1] Includes transfers.

Minor Coins Outstanding

The following statement shows the coinage of minor coins, by denominations, the amount on hand at the mints, issued, melted, and outstanding June 30, 1940. Minor coins were first manufactured at the Philadelphia Mint in 1793, at the San Francisco Mint in 1908, and at the Denver Mint in 1911.

Item	Coined	On hand at mints unissued	Issued	Melted	Amount issued and outstanding June 30, 1940
Copper half cents [1]	$39,926.11		$39,926.11	$1.94	$39,924.17
Copper cents	1,562,887.44		1,562,887.44	383,606.50	1,179,280.94
Copper-nickel cents	2,007,720.00		2,007,720.00	809,123.38	1,198,596.62
Bronze cents	78,059,401.26	$522,995.25	77,536,406.01	1,898,770.47	75,637,635.54
Bronze 2 cents	912,020.00		912,020.00	344,080.64	567,939.36
Nickel 3 cents	941,349.48		941,349.48	287,954.88	653,394.60
Nickel 5 cents	109,257,182.70	744,090.00	108,513,092.70	11,508,618.80	97,004,473.90
Total	192,780,486.99	1,267,085.25	191,513,401.74	15,232,156.61	176,281,245.13

[1] There is no record of the melting of the old copper half cents, but it is believed that few, if any, are now in circulation.

Proof Bullion (1.000 fine)

In order to maintain uniformity in assay of bullion in the offices of the mint service, all proof gold and proof silver are made at one institution and furnished to other institutions when required. Proof gold is made at the New York Assay Office, while the Philadelphia Mint makes proof and inquartation silver. During the fiscal year 1940 other mints and assay offices were furnished 374 ounces of proof gold, 100 ounces of proof silver, and 3,247 ounces of inquartation silver.

Operations of the Melting and Refining and of the Coining Departments, Fiscal Year 1940

The aggregate quantity of metals operated upon in the above-mentioned departments of the coinage mints and assay office at New York during the fiscal year ended June 30, 1940, was 88.5 million fine ounces of gold and 74.1 million fine ounces of silver. There were also operated upon at the coinage mints 150.0 million ounces of minor coinage metal. The figures in the table following are based on the figures obtained at the settlements of the accounts.

Legal limits of wastage on the whole amount delivered by the superintendent to operative offices, as prescribed in section 355, title 31, United States Code, are as follows; Melter and refiner—gold, 0.001; silver, 0.0015; coiner—gold 0.0005; silver, 0.001.

Bullion Gains and Losses

The net gains from operations on gold and silver bullion during the fiscal year 1940 amounted to $172,243.33, as follows:

Item	Mint at—			Assay office at New York	Minor assay offices	Total
	Philadelphia	San Francisco	Denver			
Recovered from refining and coining operations	$12,296.70	$11,059.46	$22,257.60	$46,789.20		$92,402.96
Recovered incident to receipt of bullion deposits	8,687.46	8,429.15	6,810.04	44,995.47	$12,072.90	80,995.02
Gains on lightweight and mutilated coins received for recoinage	23.33	22.50	5.38	.98		52.25
Gain on bullion shipments (net)					1,398.06	1,398.06
Total gains	21,007.49	19,511.17	29,073.02	91,785.65	13,470.96	174,848.29
Wasted in refining and coining operations	1,860.29	629.00	115.67			2,604.96
Net gains	19,147.20	18,882.17	28,957.35	91,785.65	13,470.96	172,243.33

Wastage of Coinage Metal and Loss on Sale of Sweeps

The value of metals wasted in the operative departments during the fiscal year ended June 30, 1940, was $5,572.94. A loss of $4,447.67 occurred from the difference between the assay value of the bullion contained in sweeps sold and the amount received for the same. Details are given in the following table:

Item	Mint at—			Assay office at New York	Total
	Philadelphia	San Francisco	Denver		
Silver wastage:					
Melting and refining department		$629.00			$629.00
Coining department	$1,860.29		$115.67		1,975.96
Nickel wastage:					
Melting and refining department	446.48	60.38	99.45		606.31
Coining department	335.58	95.53	10.86		441.97
Bronze wastage:					
Melting and refining department	1,357.25	91.49	36.93		1,485.67
Coining department	396.65	33.17	4.21		434.03
Loss on sale of sweeps	1,183.31	351.42	2,168.69	$744.25	4,447.67
Total wastage and loss	5,579.56	1,260.99	2,435.81	744.25	10,020.61
Reimbursements:					
Nickel and bronze wastage on domestic coin, from minor coinage profits	2,196.68	280.57	151.45		2,628.70
Silver departmental wastage offset by other departmental surpluses	1,860.29	629.00	115.67		2,604.96
Other wastages and loss on sweeps, from appropriations	1,522.59	351.42	2,168.69	744.25	4,786.95
Total reimbursements	5,579.56	1,260.99	2,435.81	744.25	10,020.61

Employees

The total number of officers and employees of the mint service on June 30, 1940, was 1,048, as follows:

Institution	Established under act of—	Employees, by departments					Total	
		General	Engraving	Assaying	Coining	Melting and refining	June 30, 1940	June 30, 1939
Bureau of the Mint	Feb. 12, 1873	44					44	44
Philadelphia Mint	Apr. 2, 1792	160	10	12	125	43	350	380
San Francisco Mint	July 3, 1852	84		15	28	44	171	178

Total 1939		633	10	65	183	182		1,073

[1] Conducted as an assay office since 1910.
[2] Allotment made from a lump conctruction appropriation.

Assay Commission's Annual Test of Coin for 1939

Section 363, title 31, United States Code, provides for an annual test of the domestic coinage executed during each calendar year by a commission, of whom part are ex officio members, the others, who serve without compensation, being appointed by the President. The purpose is to secure a due conformity in the gold and silver coins to

their respective standards of fineness and weight. The Commission, which met at the Philadelphia Mint February 14, 1940, reported the following results of their examination of the 1939 coinage:

In accordance with section 3539 of the Revised Statutes, your committee on counting reports that the packages said to contain the pieces reserved by the several mints for the trial of coins were delivered to us by the Superintendent of the mint at Philadelphia.

A liberal number of packages were selected from the deliveries of each month of all denominations coined, and the coins contained therein were counted and found to agree with the number designated on each envelope.

The committee on assaying has completed the assays on samples taken from the different lots of coin representing all denominations coined during the year 1939 by the United States mints at Philadelphia, San Francisco, and Denver.

No gold was coined at any of the mints during the year 1939.

The results of the assays upon coins and mass melts made from coins is satisfactory, being well within the legal limits of tolerance, which is three one-thousandths for silver coins.

The highest and lowest assays on individual silver coins selected were as follows:

	Highes	*Lowest*
Philadelphia Mint	900. 6	898. 4
Denver Mint	900. 6	898. 4
San Francisco Mint	900. 0	898. 4

Mass melts:

Philadelphia Mint	899. 2
Denver Mint	898. 6
San Francisco Mint	898. 9

The committee on weighing reports that it selected at random a total of 93 coins, consisting of 60 coins from the Philadelphia Mint. 16 from Denver, and 17 from San Francisco. These coins were drawn from 88 different shipments.

The coins were weighed directly against a set of sealed coin weights supplemented by a set of grain weights which had been certified by the National Bureau of Standards, Washington, D. C., and the coins were weighed to an accuracy of 0.01 grain. It is to be noted that the weight of each coin was well within the tolerance allowed by law.

The following table shows the maximum deviation of the heaviest and the lightest coins of each denomination from each mint as found from the individual weighings:

Denomination	Legal deviation allowable	Actual deviation					
		Philadelphia		Denver		San Francisco	
		Heavy	Light	Heavy	Light	Heavy	Light
	Grains	*Grains*	*Grains*	*Grains*	*Grains*	*Grains*	*Grains*
Half Dollar	1. 5	0. 62	0. 85	0. 75	0. 55	0. 73	
Quarter dollar	1. 5	0. 84	0. 65	0. 50	0. 40	0. 45	0. 47
Dime	1. 5	0. 50	0. 38[1]	0. 51	0. 17	0. 43	0. 14

[1] Proof coin.

Considering the 93 coins as a group the average deviation with regard to sign was found to be only 0.02 grain, in other words, in the coins examined the light coins were offset very closely by the heavy coins. The average deviation without regard to sign was 0.29 grain.

The foregoing report, covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1940, is respectfully submitted.

NELLIE TAYLOE ROSS,
Director of the Mint.

Hon. HENRY MORGENTHAU, Jr.,
Secretary of the Treasury.

REPORT OF THE DIRECTOR OF THE MINT ON THE PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1939

REPORT ON PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1939

INTRODUCTION

The official estimate of the production of gold and silver in the United States is made by the Bureau of the Mint with the cooperation of the Bureau of Mines, the latter making a mine canvass in each State and the former working backward from mint deposits through refineries, smelters, and other reduction works to the mine production estimate made by the former. The official estimate represents the material received at mint service offices and private refineries. The difference between this estimate and the mine production estimate is almost entirely due to the time element involved in the reducing processes, since differences for series of years are shown by comparison to practically offset each other. The two systems thus verify and support each other.

The gold production of the United States, including its insular dependencies, for the calendar year 1939 is estimated to have been 5,611,171 fine ounces, valued at $196,391,000, and the production of silver is estimated at 65,119,513 fine ounces, valued at $44,202,279. A comparison of these figures with those of 1938 indicates about 521,000 fine ounces increase in production of gold and approximately 2,454,000 ounces increase in silver production.

In continental United States, the State of largest gold production, California, increased its output in 1939 more largely than any of the other States, its increase being about 107,000 fine ounces to a total of nearly 1,425,000 fine ounces. Nevada, Montana, Utah, and South Dakota materially increased their gold output, the increases being, respectively, about 71,000, 68,000, 51,000, and 26,000 fine ounces. The increase in the Philippine Islands was larger than that of California, it amounting to 146,000 fine ounces, giving the year's total of over 990,000 fine ounces, which exceeded that of any State except California. Alaska's increase amounted to over 11,000 fine ounces, and its total output for the year was over 671,000 fine ounces.

The 1939 silver production increased more largely in Montana than in any other State of the Union—by over 2,165,000 fine ounces as compared with 1938. The largest reduction occurred in Idaho, over 1,100,000 fine ounces. Idaho continued as the State of largest silver output, its total being about 17,240,000 fine ounces, with Utah second in rank, over 10,800,000 fine ounces.

A brief review of mining conditions, for which acknowledgments are made to the United States Bureau of Mines, follows. The production figures therein differ, as explained above, from the Bureau of the Mint production estimates. Further information concerning same can be obtained by those interested by addressing the Bureau of Mines at Washington.

ALASKA

The production of gold, in terms of recovered metal, from ores and gravels of Alaska during 1939 was 676,737 fine ounces valued at $23,685,795, an increase of 2 percent over 1938, according to Charles W. Henderson, of the United States Department of the Interior, Bureau of Mines. There are no smelters or refineries in Alaska. The bulk of the gold produced in 1939 was in the form of bullion and dust sent to United States mints and assay offices either directly or through banks and bullion buyers located in the larger mining centers of Alaska. The rest was contained in high-grade ore and concentrates sent to the Selby (Calif.) and Tacoma (Wash.) smelters.

Forty-four floating dredges (43 connected-bucket and one single dipper floating dredge) yielded 45 percent of the total gold output from all sources in 1939. The gravel washed by the 44 dredges in 1939 averaged 54 cents per yard in value of recoverable gold. The United States Smelting, Refining & Mining Co., operating 6 dredges in the Fairbanks (part of Tanana) district and 3 dredges in the Nome district, using auxiliary hydraulic and drift mining methods, was by far the largest producer. Other producers of a notable quantity of gold from floating connected-bucket dredges were: Gold Placers, Inc., Alluvial Gold, Inc., and C. J. Berry Dredging Co., in Circle district; Bristol Bay Mining Co., Goodnews Bay district; New York Alaska Gold Dredging Co., Tuluksak-Aniak district; Arctic Circle Exploration Co., Inc., Fairhaven district.

The production of gold from other placer operations (dragline floating and dry-land dredge, hydraulic, drift mining, and sluicing) during 1939 was 162,576 fine ounces, valued at $5,690,160, an increase of 6 percent over 1938; the increase is the result of the more extensive use of mechanical equipment, facilitating the handling of greater yardages. Dry-land dredges and dragline floating dredges produced approximately 97,000 ounces; sluicing, hydraulic, and drift mining produced approximately 65,576 ounces.

Gold produced from lode mines amounted to 209,166 fine ounces in 1939, a decrease of 11 percent from 1938. Although there were 73 producing mines in the Territory, 3 more than in 1938, the smaller output of gold from lode mines resulted from the decrease in production of the Alaska Juneau Gold Mining Co., in the southeastern Alaska region, and the Nabesna Mining Corporation, in the Copper River region. For the first 6 months of 1939 the Alaska Juneau Gold Mining Co. was tying in its Perseverence section with the other sections of the mine, causing some disruption in its operations; the assay value per ton of ore mined in 1939 was 16 cents less than that of 1938. Other lode mines making a creditable output were: The Alaska Pacific Consolidated Mining Co. and the Conwest Exploration Co., in Willow Creek district; the Hirst Chichagof Mining Co., Chichagof Island district; the Cleary Hill Mines Co. and the United States Smelting, Refining & Mining Co., Fairbanks district.

The output of silver, in terms of recovered metal, in 1939 (all a byproduct of gold mining) was 201,054 ounces (valued at $136,473); in quantity it was only 42 percent of that of 1938. This heavy decrease is due mainly to the absence of any production in 1939 from the copper-silver mines in the Copper River region, abandoned late in 1938, but also in lesser extent to the decrease in production of silver

from the Alaska Juneau Gold Mining Co.; that company's production in 1939 represented 55 percent of the Territory's silver output.

ARIZONA

The output of recoverable gold, silver, copper, lead, and zinc from mines in Arizona in 1939 was valued at $72,616,408, compared with $58,358,401 in 1938, an increase of $14,258,007 (24 percent) according to T. H. Miller and Paul Luff, of the United States Department of the Interior, Bureau of Mines. The quantity and value of each of the five metals were greater in 1939 than in 1938, owing to the increase in average sales prices of silver, copper, lead, and zinc, and to maintenance of the price of gold at $35 an ounce. The output of gold increased 4 percent; silver, 5 percent; copper, 24 percent; lead, 2 percent; and zinc, 15 percent. Nearly half of the gold and more than half of the silver produced in Arizona in 1939 were recovered from copper ore; copper ore yielded gold, silver, copper, and lead valued at $62,227,585 in 1939, an increase of $13,596,489 over 1938. Of the total ore treated in Arizona in 1939, 93 percent was copper ore, 4 percent was dry and siliceous gold ore, and the remainder was mostly zinc-lead ore and dry and siliceous gold-silver ore. The output of copper ore increased from 13,047,356 tons in 1938 to 17,468,926 tons in 1939 and dry and siliceous ores from 928,707 to 1,042,004 tons; there were also increases in the output of lead ore, zinc-lead ore, and zinc-copper ore.

The output of recoverable gold from lode mines and placers in Arizona in 1939 was 316,453 ounces valued at $11,075,855, compared with 305,043 ounces valued at $10,676,505 in 1938. Gold recovered from copper ore increased from 133,409 ounces in 1938 to 139,527 ounces in 1939 and gold from dry and siliceous ores increased from 150,371 ounces to 158,398 ounces. Lode mines produced 310,044 ounces of gold in 1939 and placers 6,409 ounces, compared with 300,058 ounces and 4,985 ounces, respectively, in 1938. Dry and siliceous ores yielded 50 percent of the total gold in 1939; copper ore, 44 percent; and zinc-lead ore, 3 percent; the remaining 3 percent came from other base ores and from placers. About 64 percent of the total placer gold was recovered by a dragline floating dredge on Lynx Creek in Yavapai County and a drift mine near Quartzsite in Yuma County. Dry and siliceous ores treated at amalgamation and cyanidation mills increased from 616,544 tons in 1938 to 738,943 tons in 1939, and the output of gold (in bullion and concentrates) increased from 103,635 ounces to 112,166 ounces. Ore treated by straight concentration increased from 10,546,807 tons in 1938 to 14,017,765 tons in 1939, but the gold in the concentrates produced decreased from 78,522 ounces to 76,415 ounces. Crude ore shipped to smelters increased from 1,659,601 tons in 1938 to 1,922,003 tons in 1939, and gold therefrom increased from 117,901 ounces to 121,463 ounces. The Phelps Dodge Corporation continued to be the largest producer of gold in Arizona; the company operated its copper mines at Bisbee, Ajo, Jerome, and Morenci throughout the year and shipped about 16 percent more crude copper ore and concentrates to a smelter in 1939 than in 1938. The Magma mine at Superior and the Denn mine at Bisbee were also large producers of gold from copper ore. The Mammoth-St. Anthony property in Pinal County, the Gold Road,

Gold Standard, Pilgrim, Klondyke, Western, Big Jim, and Tom Reed mines in Mohave County, and the Octave, Iron King, Alvarado, Congress, and Golden Turkey mines in Yavapai County were large producers of gold from dry and siliceous ores (chiefly gold ore treated by cyanidation). The Montana mine in Santa Cruz County and the Hillside mine in Yavapai County were large producers of gold from zinc-lead ore. The chief gold-producing districts in Arizona in 1939 were the Warren, San Francisco, Verde, Ajo, Old Hat, and Weaver (Yavapai County).

The output of recoverable silver in Arizona in 1939 was 7,824,004 ounces valued at $5,310,839, compared with 7,479,153 ounces valued at $4,835,008 in 1938. Most of the gain was due to the increase in the output of copper ore, zinc-lead-silver ore, and zinc-copper-silver ore. Silver from copper ore increased from 4,525,435 ounces in 1938 to 4,820,469 ounces in 1939, that from zinc-lead-silver ore from 650,964 to 790,855 ounces, and that from zinc-copper-silver ore from 63,845 to 182,800 ounces, but silver from siliceous ores declined from 2,147,133 to 1,939,317 ounces. Copper ore yielded 62 percent of the total silver in 1939; dry and siliceous ores, 25 percent; and zinc-lead ore, 10 percent. In 1939 the four properties (Copper Queen, United Verde, New Cornelia, and Morenci) of the Phelps Dodge Corporation produced 51 percent of the State total silver. Other large silver producers in 1939 were the Magma, Montana (Eagle-Picher Mining & Smelting Co.), Ash Peak, Shattuck Denn, Iron King, Golden Turkey, and Trench mines. The chief silver-producing districts in Arizona in 1939 were the Warren, Verde, Pioneer (Superior), Oro Blanco (Ruby), Wallapai (Chloride), Ajo, Ash Peak, Big Bug, Harshaw, and Black Canyon.

CALIFORNIA

California gold output (in terms of recovered metal) in 1939 again exceeded that in the Philippine Islands, Alaska, and South Dakota, the other leading producers, in order of production, according to Charles White Merrill, of the United States Department of the Interior, Bureau of Mines. The quantity of recoverable gold produced in 1939 was greater than that for any year since 1862, and its value was greater than that for any year since 1856. Although the data of gold production in California before 1901 do not segregate placer and lode gold, it appears certain that the output of lode gold was greater in 1939 in both quantity and value than in any preceding year. Placer gold production during 1939 is known to have exceeded any year since 1900. Moreover, the value of placer gold in 1939 exceeded the value of lode and placer gold combined for any year from 1865 to 1882 and from 1884 to 1900.

The output of recoverable gold from California ores, gravels, and re-treated tailings in 1939 was 1,435,264 fine ounces valued at $50,234,240 compared with a production of 1,311,129 ounces valued at $45,889,515 in 1938; the increase in both quantity and value was 9 percent. In 1939 lode mines produced 799,219 ounces of gold valued at $27,972,665, and placer mines produced 636,045 ounces of gold valued at $22,261,575. Lode mines accounted for 56 percent and placer mines 44 percent of the total in both 1938 and 1939. Of the gold derived from lode operations, 91 percent was recovered from dry gold ore, 7 percent from copper ore, and most of the rest from dry gold-silver

ore. The persistence of free-milling gold ore in California is indicated by the metallurgical tables, which show that 43 percent of the lode gold in 1939 was recovered by amalgamation; cyanidation of sands, slimes, old tailings, and concentrates accounted for 32 percent; smelting of concentrates, 24 percent; and smelting of ore, 1 percent. However, these metallurgical data, when compared with those for 1937 and 1938, show a progressive decline in the use of amalgamation and an increase in the application of cyanidation.

Dredging was the leading method of working placer deposits, both in point of yardage of gravel treated and quantity of placer gold recovered. Floating dredges of the connected-bucket type handled 121,655,000 cubic yards of gravel and recovered 370,264 ounces of gold valued at $12,959,240 or 58 percent of the placer gold produced in the State in 1939. Dragline dredges (those having a floating washing plant to which gravel is delivered by a dragline excavator) handled 31,618,000 yards of gravel, which yielded 172,519 ounces of gold valued at $6,038,165. Nonfloating washing plants to which gravel was delivered by mechanical means treated 5,512,000 yards of gravel and recovered 41,694 ounces of gold valued at $1,459,290. Hydraulic mines accounted for the production of 6,059 ounces of gold valued at $212,065 derived from 921,000 yards of gravel; 83,000 yards of gravel from drift mines were treated with a recovery of 6,525 ounces of gold valued at $228,375. Small-scale, hand-operated equipment, including small sluice boxes, long toms, dip boxes, rockers, pans, and dry washers, was used in the production of 38,984 ounces of gold valued at $1,364,440. Decreases in 1939 compared with 1938 were recorded from all sources except dragline dredges and nonfloating washing plants.

Nevada County, because of the productivity of its Grass Valley-Nevada City district, continued to be the leading gold-producing county of the State; the county yielded 22 percent of the State's gold and 37 percent of the State's lode gold in 1939. The high rank in gold production of Sacramento, Yuba, Butte, Merced, Placer, Siskiyou, and Trinity Counties was attained largely from the output of placer gold, the product of dredges, both connected-bucket and dragline. Amador, Calaveras, Eldorado, and Mariposa Counties on the Mother Lode were important gold producers. Large gold outputs were also recorded for Kern, Plumas, and Shasta Counties.

The principal gold-producing mines in California in 1939, ranked in order of output and listed by operators, included the Idaho-Maryland Mines Corporation, Nevada County (gold ore), the Empire Star Mines Co., Ltd., Nevada County (gold ore), Natomas Co., Sacramento County (dredge), Yuba Consolidated Gold Fields, Yuba County (dredge), Central Eureka Mining Co., Amador County (gold ore), Lava Cap Gold Mining Corporation, Nevada County (gold ore), Capital Dredging Co., Sacramento County (dredge), Carson Hill Gold Mining Corporation, Calaveras County (gold ore), Golden Queen Mining Co., Kern County (gold ore), and Argonaut Mining Co., Ltd., Amador County (gold ore).

The output of silver from California ores, gravels, and re-treated tailings in 1939 was 2,599,139 fine ounces valued at $1,764,264 compared with the production of 2,590,804 ounces valued at $1,674,863 in 1938. Of the lode silver 47 percent was derived from dry gold ore,

43 percent from dry gold-silver ore, 2 percent from dry silver ore, and the remaining 8 percent from base-metal ores. A small quantity of silver was recovered as byproduct of gold dredging. Smelting of flotation concentrates accounted for almost 52 percent of the lode gold recovered in the State; 37 percent was recovered by cyanidation of ore, old tailings, sands, slimes, and concentrates; 8 percent by direct smelting; almost 3 percent by amalgamation of ore and old tailings; and 1 percent by smelting of gravity concentrates.

The principal silver-producing mines in California in 1939, ranked in order of output and listed by operators, were the Cactus Mines Co., Kern County (gold-silver ore), Golden Queen Mining Co., Kern County (gold ore), Graham Loftus Oil Corporation, Napa County (gold-silver ore), Lava Cap Gold Mining Corporation, Nevada County (gold ore), Lodestar Mining Co., Kern County (gold ore), and Walker Mining Co., Plumas County (copper ore).

CENTRAL STATES

The only output of gold from mines in the Central States in 1939 was a few ounces (4) of placer gold recovered in Vigo County, Indiana. The output of silver from mines in the Central States decreased from 386,210 ounces in 1938 to 315,953 ounces in 1939. All of the Michigan output in 1939 (101,878 ounces) was derived from copper ore. The entire production of silver from Missouri in 1939 (213,400 ounces) was from the refining of lead bullion and the treatment of skimmings; no copper ore was treated. Silver recovered from galena shipments from southern Illinois fluorspar mines in 1939 was 675 ounces compared with 576 ounces in 1938.

COLORADO

Gold production in Colorado in 1939 totaled 366,852 fine ounces (in terms of recovered metal), valued at $12,839,820, a decrease of 0.2 percent from 1938, according to Charles W. Henderson and A. J. Martin, of the Department of the Interior, Bureau of Mines. Teller County (Cripple Creek) continued to be the leading county, yielding 37 percent of the State total output of gold compared with 40 percent in 1938. The decrease in 1939 resulted largely from the temporary suspension of operations below the Roosevelt drainage tunnel in the Ajax and Cresson mines pending the completion of the new 6-mile Carlton drainage tunnel, for the driving of which the Golden Cycle Corporation, owner of the Ajax mine, authorized the expenditure of $1,000,000. This tunnel, which will drain the area around the Portland, Vindicator, Ajax, and Cresson mines to a depth approximately 1,100 feet below the maximum 1,900 feet now drained by the Roosevelt tunnel, was started in July 1939 and had been driven 7,308 feet by the end of the year. Park County, ranking next to Teller in gold output, contributed 12 percent of the State total, mostly from the London and London-Butte groups of lode mines and the Alma, Fairplay, Beaver Creek, and Tarryall placers. The *Timberline* floating connected-bucket dredge on Beaver Creek was the largest individual producer from placer mines in the county. Clear Creek County ranked third in the State in gold production, followed by San Miguel, Boulder, Eagle, San Juan, Rio Grande, Ouray, and Gilpin, all of which produced more than 10,000 ounces. The most important differences

from 1938 in gold output outside of Teller County were an increase of 12,821 ounces in San Miguel County, the result of extensive development campaigns carried on at the Smuggler Union, Alta-St. Louis, and Butterfly groups; and a decrease of 10,364 ounces in San Juan County, caused by the idlenes sthroughout the year of the Sunnyside mine, which was active part of 1938, and the interruption of operations of the Shenandoah-Dives Mining Co. from June 16 to September 7 by a strike of company employees.

The output of silver from Colorado mines in 1939 was 8,496,488 fine ounces, the highest in quantity since 1914; in value, however, the annual output from 1917 to 1920 and in 1922 exceeded that in 1939 ($5,767,313) owing to the high price of silver in those years. Eagle County contributed 71 percent of the State total silver in 1939, Mineral County 7 percent, San Miguel 7 percent, San Juan 3 percent, and other counties combined, chiefly Pitkin, Ouray, Lake, and Clear Creek, 12 percent. The principal silver-producing properties were: Eagle mine, Eagle County; New York-Pittsburg-Last Chance-Del Monte group, Mineral County; Smuggler Union group, San Miguel County; Shenandoah-Dives-Mayflower group, San Juan County; and Butterfly group, San Miguel County.

The number of lode mines in Colorado producing gold and silver in 1939 was 758, and placer mines 583. The total ore sold or treated during the year was 1,914,593 tons, of which 1,542,235 tons were dry and siliceous gold, gold-silver, and silver ores yielding 87 percent of the total State output of gold and 23 percent of the silver. Copper ore yielded 6 percent of the gold and 72 percent of the silver. Lead, lead-copper, zinc, and zinc-lead ores combined yielded slightly more than 1 percent of the gold and 5 percent of the silver. Placer mines produced nearly 6 percent of the total State gold. Amalgamation and cyanidation mills recovered 60 percent of the gold and 1 percent of the silver from lode mines in the form of bullion and retorts; the remainder was contained in crude ore and concentrates shipped to smelters. The quantity of gravel handled by two floating connected-bucket dredges, one dragline floating dredge, and 26 dry-land dredges was approximately 2,430,964 cubic yards; specific data on yardage handled at small-scale placer operations are not obtainable. The total production of gold and silver in Colorado, in terms of recovered metals, compiled from all sources by Charles W. Henderson, from 1858 to 1939, inclusive, has been: Gold, 37,549,390 ounces; silver, 700,938,158 ounces.

EASTERN AND APPALACHIAN STATES

The mine production of gold in the Eastern and Appalachian States decreased from 19,928 fine ounces in 1938 to 17,414 ounces in 1939. The decreases were general, as the only increases were in Pennsylvania and South Carolina and were due to one mine in each State. The larger decreases were in Maryland, North Carolina, and Virginia. Two lode mines, one each in Pennsylvania and South Carolina, yielded nearly 90 percent of the total output in 1939. Nearly as many small placer mines were operated in 1939 as in 1938. Lode mines operated decreased by 7 and the output from both lode and placer mines decreased in 1939.

In 1939 Alabama mines yielded only 3 ounces of gold, Georgia 670 ounces, Maryland 71 ounces, North Carolina 495 ounces, Pennsylvania 1,815 ounces, South Carolina 13,833 ounces, Tennessee 163 ounces, and Virginia 364 ounces. About 24 placer mines in Georgia, North Carolina, South Carolina, and Virginia yielded 413 ounces of gold in 1939 compared with 667 ounces in 1938. Placer mines in Georgia had an output of 393 ounces in 1939—only two of the placer mines yielded more than 100 ounces of gold. The estimated output of gold in the Southern Appalachian States from 1790 to 1939, inclusive, is 2,548,375 fine ounces.

Copper ore from North Carolina and Tennessee and copper concentrates from magnetite-pyrite-chalcopyrite ore from Pennsylvania yielded 2,052 ounces of gold, which was 255 ounces more than in 1938. In 1939 120,274 tons of siliceous ore from Alabama, Georgia, Maryland, North Carolina, South Carolina, Tennessee, and Virginia were treated, yielding 14,949 ounces of gold. Ore treated at gold and silver mills aggregated 120,047 tons yielding 14,656 ounces of gold in bullion, and gold concentrates shipped to smelters (95 tons) containing 173 ounces. Only 227 tons of siliceous ore were shipped crude to smelters; this ore yielded 120 ounces of gold. Ore amalgamated (5,437 tons) yielded in bullion 945 ounces of gold and ore cyanided (114,610 tons) yielded 13,711 ounces. The larger producers of gold from siliceous ore were the Haile mine in South Carolina, the Hamilton mine in Georgia, and the Red Bank in Virginia.

The mine output of silver in the Eastern States in 1939 was 94,083 ounces against 94,945 ounces in 1938. Of the 1939 output, copper ore from Tennessee yielded 31,994 ounces, copper ore from North Carolina 3,827 ounces, copper concentrates from Pennsylvania 13,558 ounces, and lead concentrates from zinc-lead ores from New York, Tennessee, and Virginia 39,290 ounces. Siliceous ores, mainly from South Carolina and Virginia, yielded 6,023 ounces of silver. Only 35 ounces of silver were derived from placer bullion.

IDAHO

The output of recoverable gold, silver, copper, lead, and zinc from mines in Idaho in 1939 was valued at $29,794,144, compared with $29,028,103 in 1938, an increase of $766,041 (nearly 3 percent), according to T. H. Miller and Paul Luff of the United States Department of the Interior, Bureau of Mines. The output of gold increased 13 percent, copper 18 percent, and zinc 8 percent; the output of silver declined 9 percent and that of lead 1 percent, but the value of the lead output increased slightly as a result of the higher average sales price. Production of gold in Idaho in 1939 (116,662 fine ounces) was the largest since 1895; the gain was due to an increase of 18,565 ounces from lode mines as the output from placers declined 5,416 ounces. The output of gold, copper, and zinc in the Coeur d'Alene region, the most important metal-producing area in Idaho, was greater in 1939 than in 1938, but the output of silver and lead was less.

The output of recoverable gold increased from 103,513 ounces valued at $3,622,955 in 1938 to 116,662 ounces valued at $4,083,170 in 1939, a gain of nearly 13 percent; the gold output in 1939 was the largest recorded since 1895 when 125,517 ounces were produced. Gold from lode mines increased more than 37 percent to 67,999 ounces,

but that from placers decreased 10 percent to 48,663 ounces. Most of the gold from placer mines came from 8 connected-bucket dredges operating in Boise, Clearwater, and Idaho Counties; these dredges treated 6,626,356 cubic yards of gravel in 1939 and recovered 28,973 ounces of gold, a decrease of 2,261 ounces from 1938. Twenty-three dragline or power-shovel excavators with either dry-land or floating washing plants (operating chiefly in Idaho, Owyhee, Caynon, and Ada Counties) treated 2,094,600 cubic yards of gravel in 1939 and recovered 14,051 ounces of gold, a decrease of 3,397 ounces from 1938. Of the total placer gold produced in Idaho in 1939, 85 percent came from the Boise Basin, Warren, Newsome, Carson, Elk City, Pierce, Orogrande, and Riggins districts, where dredges were operated. The chief producers were Fisher-Baumhoff Co., Warren Dredging Co., Newsome Creek Placers, Idaho-Canadian Dredging Co. (formerly Moores Creek Dredging Co.), American River Mining Co., The Grimes Co., Quartz Creek Dredging Co., Mt. Vernon Co., and De Lamar Placers. The Jordan Creek Placers in Owyhee County and Ralph Davis, Inc., in Gem County, large producers of placer gold in 1938, suspended operations in December 1938.

About 92 percent of the total gold from lode mines came from dry and siliceous ore (chiefly gold ore) and nearly all the remainder came from zinc-lead ore. Dry and siliceous ores treated at amalgamation and cyanidation mills decreased from 186,163 tons in 1938 to 121,898 tons in 1939; the 1939 tonnage yielded 29,479 ounces of gold (in bullion and concentrates) and came chiefly from Idaho, Elmore, and Lemhi Counties. Ore treated at straight concentration plants yielded 23,247 ounces of gold in the concentrates, and crude ore shipped direct to smelters yielded 15,273 ounces. About 89 percent of the lode gold came from the Warm Springs, Middle Boise, Burgdorf-Marshall Lake, Yellow Pine, Mineral Hill, Carson, Boise Basin, Ramey Ridge, Ten Mile, and Yankee Fork districts and the Coeur d'Alene region. The chief producers were the Triumph, Golden Anchor, Boise Rochester, Yellow Pine, Golden Chest, De Lamar Milling Corporation, and Grunter properties.

The output of recoverable silver in Idaho decreased from 18,993,676 ounces in 1938 to 17,222,370 ounces in 1939, and the value from $12,278,740 to $11,690,336. The quantity declined 9 percent but the value only 5 percent as the average sales price of silver rose from $0.646+ per ounce in 1938 to $0.678+ per ounce in 1939. Idaho retained its position as the largest silver-producing area in the United States. Dry and siliceous silver ore yielded 65 percent of the total silver produced in Idaho in 1939, zinc-lead ore 24 percent, lead ore 5 percent, and gold-silver ore 4 percent. The output of silver from silver ore decreased 2,358,552 ounces in 1939, and that from lead ore also declined, but the output from zinc-lead ore increased 508,520 ounces, and that from gold-silver ore 632,251 ounces. The large decrease in output of silver from silver ore resulted chiefly from the decline in silver content of ore from the Sunshine mine as the output of ore from the mine in 1939 was virtually the same as in 1938. However, the mine retained its position as the largest producer of silver in the United States. The Coeur d'Alene region produced 88 percent of the State total silver in 1939; the remainder came chiefly from the Warm Springs, Bayhorse, Carson, Porthill, Pend d'Oreille, Blue Wing, Burgdorf-Marshall Lake, and Boise Basin districts. Nine mines—

the Sunshine, Bunker Hill & Sullivan, Triumph, Polaris, Morning, Hecla, Crescent, Page, and Mineral Point—produced 92 percent of the State silver output in 1939. All these mines except the Triumph, are in the Coeur d'Alene region, Shoshone County.

MONTANA

The output of recoverable gold, silver, copper, lead, and zinc from mines in Montana in 1939 was valued at $40,937,870, compared with $28,096,746 in 1938, an increase of $12,841,124 (46 percent), according to T. H. Miller and Paul Luff, of the United States Department of the Interior, Bureau of Mines. Substantial gains were recorded in the output of all five metals; the value of the copper output increased $5,214,268, zinc $2,770,072, gold $2,130,100, silver $2,028,598, and lead $698,086. The total value of the metal output from mines in Silver Bow County increased from $18,300,823 in 1938 to $27,677,359 in 1939, a gain of $9,376,536; the gain represented 73 percent of the total gain in Montana. Reopening of the zinc mines and increased output from the copper mines of the Anaconda Copper Mining Co. at Butte accounted for most of the gains from Silver Bow County. There were important increases in the output of siliceous ores, chiefly gold ore, from several counties and the gain in the output of gold from placer mines was notable.

The output of recoverable gold increased from 203,313 ounces valued at $7,115,955 in 1938 to 264,173 ounces valued at $9,246,055 in 1939. The output of gold in 1939 was the largest since 1887 when 289,212 ounces were produced. Gold from lode mines increased 41,209 ounces to 209,174 ounces in 1939 and gold from placers increased 19,651 ounces to 54,999 ounces. Dry and siliceous gold ore increased from 756,223 tons in 1938 to 815,949 tons in 1939 and yielded 68 percent of the total gold produced in Montana in 1939. The 1939 output of gold ore comprised 490,429 tons treated at cyanidation plants (433,233 tons in 1938), 82,359 tons treated at amalgamation plants, 148,138 tons treated at concentration plants, and 95,023 tons shipped direct to smelters. The ore treated at cyanidation mills (490,429 tons) yielded 68,349 ounces of gold (in bullion and concentrates) or 26 percent of the State total. Ore treated at straight concentration plants comprised 148,138 tons of gold ore, 43,600 tons of gold-silver ore, 125,262 tons of silver ore, 2,197,863 tons of copper ore, 300 tons of lead ore, 320,248 tons of zinc-lead ore, and 1,067 tons of zinc ore; concentrates produced from this ore yielded 39,923 ounces of gold, or 15 percent of the State total. Crude ore shipped direct to smelters (237,876 tons) yielded 86,928 ounces of gold or 33 percent of the total. The West Mayflower property (Madison County) of the Anaconda Copper Mining Co. was again the largest gold producer in Montana; it was followed by the Winston dredge near Clancey, the Ruby Gulch mine at Zortman, the Victoria mine at Silver Star, the Butte Highlands mine in Silver Bow County, the Butte properties of the Anaconda Copper Mining Co., the Porter dredge at Helena, the Jardine mine in Park County, the Golden Messenger mine in Lewis and Clark County, and the Southern Cross mine in Deer Lodge County. These 10 mines yielded 105,665 ounces of gold in 1939.

The output of recoverable silver in Montana in 1939 was 9,087,571 ounces valued at $6,168,533, compared with 6,403,962 ounces valued

at $4,139,935 in 1938, an increase of 42 percent in quantity and 49 percent in value. Silver from Silver Bow County increased 2,096,263 ounces in 1939 owing to increased output of copper ore and zinc-lead ore by the Anaconda Copper Mining Co. Copper ore yielded 52 percent of the State total silver in 1939, zinc-lead ore 20 percent, silver ore 18 percent, and gold ore 5 percent. Nearly 79 percent of the total silver came from ore concentrated and 19 percent came from crude ore shipped for smelting. The output of silver ore increased from 150,930 tons in 1938 to 177,892 tons in 1939. The Anaconda Copper Mining Co. was, as usual, the chief silver producer in Montana; the copper and zinc units at Butte and the Flathead mine yielded nearly 70 percent of the total silver. Other important silver producers in 1939 included the Comet mine near Basin, the Granite Bimetallic and Silver Prince mines near Philipsburg, the Big Seven and Florence mines at Neihart, the Hecla mine in Beaverhead County, and the West Mayflower mine in Madison County.

NEVADA

In 1939 Nevada gold production (in terms of recoverable metal) was the largest since 1916 in quantity and since 1912 in value, but the quantity of silver yielded was less than in 1938, according to Charles White Merrill of the United States Department of the Interior, Bureau of Mines. The recoverable output of gold from Nevada ores, re-treated tailings, and gravels in 1939 was 361,518 fine ounces valued at $12,653,130 compared with 296,434 ounces valued at $10,375,190 in 1938, an increase of 22 percent in quantity and value. Recoverable silver production in 1939 was 4,316,029 fine ounces valued at $2,929,668, compared with 4,355,471 ounces valued at $2,815,658 in 1938, a decrease of 1 percent in quantity but an increase of 4 percent in value.

Gold was recovered from the following sources: Dry gold ore, 61 percent; copper ore, 19 percent; dry gold-silver ore, 10 percent; placer gravels, 9 percent; and other ores, 1 percent. Compared with 1938, there was an increase in 1939 in the output of gold from placer gravels, copper ore, and dry ores, but a decrease from lead and zinc-lead ores. More gold was recovered by cyanidation in Nevada in 1939 than in 1938; also there was a proportionate increase, 49 percent of the lode gold was recovered by cyanidation in 1939 as compared with 41 percent in 1938. The yield of gold by amalgamation, by which only 10 percent of the Nevada lode gold was recovered in 1939, declined both in total yield and in proportionate output, compared with 1938. Nevada lode gold recovered by smelting of concentrates in 1939 increased and that recovered by smelting of ore decreased, compared with 1938. The principal Nevada gold mines, ranked in order of output in 1939 and listed by operating companies, were Getchell Mine, Inc., Humboldt County (gold ore), Black Mammoth Consolidated Mining Co. and Prescott Lease, Esmeralda County (gold ore), Consolidated Coppermines Corporation and lessees, White Pine County (copper ore), Nevada Consolidated Copper Corporation, White Pine County (copper ore), Manhattan Gold Dredging Co., Nye County (connected-bucket dredge), Chiquita Mining Co., Ltd., Clark County (gold ore), Dayton Consolidated Mines Co., Storey County (gold ore), Penelas Mining Co., Nye County (gold ore), Greenan and Co., Inc., Eureka County (gold ore), and Silver Hill Mining Co., Storey County (gold ore).

Nevada silver was recovered from the following sources in 1939: Dry gold-silver ore, 40 percent; dry silver ore, 31 percent; dry gold ore, 11 percent; copper ore, almost 7 percent; zinc-lead ore, 6 percent; lead ore, 5 percent; and zinc ore, lead-copper ore, and placer gravel, the remainder. Direct smelting of crude ore accounted for 44 percent of the lode silver produced in Nevada in 1939; 38 percent was recovered by cyanidation, 17 percent by the smelting of concentrates, and the remaining 1 percent by amalgamation.

The principal silver mines in Nevada in 1939, ranked in order of output and listed by operating companies, were the Desert Silver, Inc., Esmeralda County (silver ore), lessees of The Tonopah Mining Co. of Nevada, Nye County (gold-silver ore), Combined Metals Reduction Co., Lincoln County (zinc-lead ore), lessees of the Tonopah Belmont Development Co., Nye County (gold-silver ore), Consolidated Chollar, Gould & Savage Mining Co., Storey County (gold-silver ore), Nevada Consolidated Copper Corporation, White Pine County (copper ore), Sutro Tunnel Coalition, Inc., Storey County (gold-silver ore), Bristol Silver Mining Co., Lincoln County (silver ore), Diamond Gold Mining Co., Clark County (gold-silver ore), and various lessees on the Nevada Wonder mine, Churchill County (gold-silver ore).

NEW MEXICO

The mine output of gold in New Mexico in 1939, in terms of recovered metal, totaled 36,979 fine ounces, valued at $1,294,265, a decrease of 14 percent from 1938, according to Charles W. Henderson and A. J. Martin of the United States Department of the Interior, Bureau of Mines. The closing on May 31, 1939, of the Pecos zinc-lead-gold-silver-copper mine in San Miguel County, the chief producer of gold in the State since 1927, resulted in a decrease in its production from 13,847 ounces in 1938 to 5,694 ounces in 1939, a loss that was not made up by some increase in the aggregate output of other mines in the State. The Pecos mine had been also the largest individual producer of silver in the State, but the decrease of 155,781 ounces in its output in 1939 was considerably less than the increased output from mines in Grant and Hidalgo Counties and the State total output of silver increased 14 percent over 1938 to 1,400,878 fine ounces in 1939.

Dry and siliceous ores (111,202 tons) yielded 48 percent of the total output of gold and silver from New Mexico mines in 1939. The principal producers of these ores were the Black Hawk Consolidated Mines Co. (Mogollon Operations), Catron County; the Maxwell Land Grant Co. Aztec mine, Colfax County; and the East Camp Exploration Syndicate, Grant County (Steeple Rock district). Copper ore (4,517,429 tons), mostly from the Chino open-pit mine of the Nevada Consolidated Copper Corporation and the Ground Hog-San Jose group operated by the American Smelting & Refining Co. in Grant County and the Bonney mine of the Banner Mining Co. in Hidalgo County, yielded 26 percent of the gold and 27 percent of the silver; zinc-lead ore (128,694 tons), chiefly from the Ground Hog-San Jose group and Pecos mine, 16 percent and 22 percent; lead, lead-copper, and zinc ores from various lode mines (220,050 tons) 1 percent and 3 percent; and placer mines yielded 9 percent of the gold and a negligible quantity of silver. The quantity of gravel handled by draglines and land washing plants at five placer operations in

Sierra, Santa Fe, and Grant Counties yielding 84 percent of the State total output of placer gold was 535,462 cubic yards; specific data are not obtainable on the quantity handled with sluices, rockers, and pans at small placer mines. Figures compiled by Charles W. Henderson show that from 1848 to 1939, inclusive, New Mexico mines have produced 2,084,992 fine ounces of gold and 62,540,420 fine ounces of silver.

OREGON

The quantity of gold produced in Oregon in 1939 (in terms of recoverable metal) was 14 percent greater than in 1938, and its value was the largest in the history of the State, according to Charles White Merrill of the United States Department of the Interior, Bureau of Mines. The output of gold from Oregon ores, gravels, and re-treated tailings was 93,372 fine ounces valued at $3,268,020 compared with 81,729 ounces valued at $2,860,515 in 1938. Placer mines produced 65 percent of the gold and lode mines 35 percent. Dredges of the connected-bucket type treated 6,267,000 cubic yards of gravel in 1939 compared with 7,258,000 yards in 1938 and recovered 25,028 ounces of gold valued at $875,980 compared with 29,006 ounces valued at $1,015,210 in 1938. Dragline floating dredges handled 5,964,000 yards of gravel in 1939 compared with 2,891,000 yards in 1938 and recovered 26,257 ounces of gold valued at $918,995 in 1939 compared with 15,939 ounces of gold valued at $557,865 in 1938. Dragline dredges handled 45 percent of the gravel and recovered 43 percent of the placer gold in Oregon in 1939; connected-bucket dredges handled 47 percent of the gravel and recovered 41 percent of the placer gold. Virtually all of the lode gold was recovered from dry and siliceous gold ore; smelting of flotation concentrates accounted for the major part of the lode gold recovered.

The principal Oregon gold mines in 1939, arranged in order of importance as producers and listed by operating companies, were: Cornucopia Gold Mines, Baker County (gold ore), Sumpter Valley Dredging Co., Baker County (connected-bucket dredge), Ferris Mining Co., Grant County (dragline floating dredge), Western Dredging Co., Grant County (connected-bucket dredge), and Porter & Co., Grant County (connected-bucket dredge). These five companies contributed over one-half of the gold output in Oregon in 1939.

Oregon ores, gravels, and re-treated tailings in 1939 yielded 105,388 fine ounces of silver valued at $71,536 compared with 100,507 ounces valued at $64,974 in 1938; the increase was 5 percent in quantity and 10 percent in value. Of the State total silver Baker County contributed 85 percent and Grant County 12 percent; the Cornucopia mine alone accounted for over three-fourths of the State total.

SOUTH DAKOTA

In 1939 mines in South Dakota yielded 618,536 fine ounces of gold valued at $21,648,760, an increase of 4 percent over the previous record high annual output in 1938, according to Charles W. Henderson and A. J. Martin of the Department of the Interior, Bureau of Mines. Silver production in the State in 1939 (all a byproduct of gold mining) was 167,584 fine ounces valued at $113,754. The Homestake mine at Lead, Lawrence County, the largest producer of gold in the

United States, yielded 92 percent of the State output of gold. This mine has been operated almost continuously since 1876 and produced more gold in 1939 than in any other year in its history. Development from the 3,200- to the 5,000-foot level has been in progress since 1932, and two shafts equipped for an ultimate vertical depth of 5,000 feet are being sunk to replace other shafts, one of which was still in use in 1939. One of the new shafts has been in operation since 1934 and had been completed to the 4,550-foot level at the end of 1939; the other was begun in 1938 and had been excavated to a depth of 3,426 feet by December 31, 1939. The ore is treated in company mills by amalgamation followed by cyanidation of the sands and slimes. The net return from bullion sold in 1939 was $19,922,965 and the dividends paid amounted to $9,041,760. The ore mined and treated totaled 1,400,015 tons.

The Bald Mountain Mining Co., operating its group of mines and 350-ton cyanide plant at Trojan, treated 122,524 tons of ore in 1939 which, together with 74 tons shipped crude to smelters, yielded 29,279 fine ounces of recoverable gold and 37,132 fine ounces of silver; the return to the company after deductions for transportation and mint and smelter charges was $1,040,982. The other principal producers during the year were the Canyon Corporation, operating the Maitland mine 5½ miles northwest of Deadwood; the Gilt Edge Mines, Inc., working the Gilt Edge-Dakota Maid group in the Bear Butte district, Lawrence County; and the Empire Gold Mines, Inc., operating the Golden Slipper mine near Hill City, Pennington County. Placer mines in the State yielded 622 ounces of gold and 47 ounces of silver. The total production of gold and silver (in terms of recovered metals) in South Dakota from 1876 to 1939, inclusive, as compiled by Chas. W. Henderson, has been 18,850,644 ounces of gold, valued at $441,369,749 and 8,999,991 ounces of silver, valued at $6,402,381.

TEXAS

Texas mines yielded 324 fine ounces of gold, valued at $11,340, and 1,341,945 fine ounces of silver valued at $910,896 in 1939, according to mine-production figures compiled by Charles W. Henderson and A. J. Martin of the Department of the Interior, Bureau of Mines. Compared with 1938, the output of gold decreased 26 percent in quantity and value and that of silver decreased 6 percent in quantity but only 2 percent in value owing to the increase in price from $0.646+ to $0.711+ per fine ounce by an act of Congress approved July 6, 1939. Nearly all the State gold and 97 percent of the silver came from the Presidio mine of the American Metal Co., at Shafter, Presidio County; the remainder was contained in silver, copper, and lead ore shipped crude to the El Paso smelter from mines and prospects in Culberson and Hudspeth Counties, among which the Hazel mine in Culberson County and the Sancho Panza and Plata Verde mines in Hudspeth County were the only producers of more than a car of ore.

The Presidio mine is equipped with a 400-ton gravity concentration-cyanidation mill which was run at an average rate of 381 tons daily in 1939, compared with 350 tons in 1938. The minerals contained in the ore are argentite, cerargyrite, galena, anglesite, and cerussite. From 1885 to 1939, inclusive, the mine has produced 1,947,340 tons of ore containing 32,230,808 ounces of silver; the recovery in the mill

(averaging 84.52 percent for the period) totaled 27,240,351 ounces. Recovery of some gold and lead with the silver has made this mine the largest producer of these metals also in the State. The total output of gold and silver in Texas (in terms of recovered metals) from the beginning of production in 1885 to the end of 1939, compiled from all sources by Charles W. Henderson, has been 7,423 fine ounces of gold, and 30,091,579 fine ounces of silver.

UTAH

The output of recoverable gold, silver, copper, lead, and zinc from mines in Utah in 1939 was valued at $62,725,551, compared with $43,745,902 in 1938, an increase of $18,979,649 (43 percent), according to T. H. Miller and Paul Luff of the United States Department of the Interior, Bureau of Mines. There was a gain in total value of each of the five metals, notably in copper which increased $14,560,424; the total value of gold rose $2,699,235, that of silver $1,043,302, that of lead $317,152, and that of zinc $359,536. Most of the gain in copper and gold was in the Bingham district and was due to a larger output of copper ore by the Utah Copper Co. There was a substantial increase in production of zinc-lead ore from the Park City region, but this gain was partly offset by decreased output of zinc-lead ore from other sections of the State.

The output of recoverable gold increased from 200,630 ounces valued at $7,022,050 in 1938 to 277,751 ounces valued at $9,721,285 in 1939, a gain of 77,121 ounces (38 percent). Gold recovered from copper ore increased from 98,100 ounces in 1938 to 159,653 ounces in 1939 as the output of copper ore increased from 12,032,385 tons to 19,602,472 tons. Gold from lead ore, zinc-lead ore, and zinc-lead-copper ore increased 302 ounces and gold from dry and siliceous ores increased 15,228 ounces. Base ores (copper ore, lead ore, lead-copper ore, zinc-lead ore, and zinc-lead-copper ore) yielded 69 percent of the State total gold and dry and siliceous ores nearly 31 percent; placers in Utah yielded only 145 ounces of gold in 1939. Ore treated at straight concentration plants yielded 67 percent of the total gold in 1939, crude ore smelted 27 percent, and ore to cyanidation mills nearly 6 percent. Mines in the West Mountain (Bingham) district produced about 69 percent of the total gold; there was an increase of 61,165 ounces in the district output. The Utah Copper Co. was, as usual, the largest gold producer in Utah, followed by the Con Mercur, United States & Lark, Tintic Bullion, and Mammoth mines.

The output of recoverable silver increased from 9,682,732 ounces valued at $6,259,544 in 1938 to 10,758,657 ounces valued at $7,302,846 in 1939. Silver from the Bingham district increased 448,502 ounces, chiefly as a result of the increased output of copper ore by the Utah Copper Co.; silver from Tooele County increased more than 600,000 ounces owing to greater production from the Ophir Hill and Hidden Treasure properties; and silver from the Park City region increased 267,069 ounces owing to the reopening of the Silver King Coalition and Park Utah Consolidated properties; but silver from the Tintic district declined 281,824 ounces. Zinc-lead ore and zinc-lead-copper ore yielded 44 percent of the total silver in 1939, dry and siliceous ores more than 31 percent, copper ore 14 percent, and lead ore 10 percent. Ore treated at concentration plants yielded 62 percent of the

total silver and crude ore smelted nearly 38 percent. The United States Smelting, Refining & Mining Co. was again the largest silver producer in Utah, followed by the Tintic Standard, Utah Copper, Silver King Coalition, Park City Consolidated, and Ophir Hill properties. These six properties produced 69 percent of the total silver in Utah in 1939.

WASHINGTON

The output of recoverable gold, silver, copper, lead, and zinc from mines in Washington was valued at $6,739,467 in 1939, compared with $5,510,440 in 1938, according to T. H. Miller and Paul Luff of the United States Department of the Interior, Bureau of Mines. Substantial gains were recorded in output of gold, silver, and copper, but losses in lead and zinc. The total value of the copper produced increased 59 percent and that of the gold and silver each 22 percent; the total value of lead declined 11 percent and that of zinc 4 percent. Except for a brief shut-down during the summer, the Holden mine and mill of the Howe Sound Co. in Chelan County were operated regularly in 1939, and gains at this property accounted for the increases in total output of gold, silver, and copper in the State. The closing of the Azurite plant in February caused a decrease in gold from Whatcom County but there was a gain in gold from Okanogan County owing to operation of the Alder group near Twisp by the Methow Gold Corporation. Production of gold from the Republic district, Ferry County, increased slightly in 1939, but that from Stevens County decreased as the First Thought cyanide mill was idle.

The output of recoverable gold increased from 74,175 ounces valued at $2,596,125 in 1938 to 90,420 ounces valued at $3,164,700 in 1939. Gold recovered from copper ore increased from 30,650 ounces in 1938 to 48,064 ounces in 1939 as the output of copper ore increased from 373,120 tons to 597,957 tons. Gold from dry and siliceous gold ore decreased 1,890 ounces in 1939 owing to the decrease in ore treated at amalgamation and cyanidation plants. Gold from gold ore shipped to smelters was nearly double that in 1938 and came chiefly from mines in the Republic district, Ferry County, and from the Alder group in Okanogan County. Ore treated at straight concentration mills increased from 631,864 tons in 1938 to 864,151 tons in 1939 and yielded nearly 54 percent of the total gold produced in the State; ore to amalgamation and cyanidation mills decreased to 167,972 tons (from 212,161 tons in 1938) and yielded 19 percent of the gold; crude ore shipped direct to smelters (92,441 tons in 1939 compared with 57,664 tons in 1938) yielded 25 percent, and placers 3 percent. Most of the placer output came from operations on the Columbia River in Stevens and Ferry Counties. The Holden property was by far the largest gold producer in Washington in 1939; other important producers included the Aurum, Knob Hill, Mountain Lion, Quilp, and Republic properties in Ferry County; the Alder property in Okanogan County; and the Azurite mine in Whatcom County.

The output of recoverable silver increased from 380,938 ounces valued at $246,263 in 1938 to 442,063 ounces valued at $300,067 in 1939. Silver from copper ore and gold ore increased but that from silver ore and zinc-lead ore decreased. Copper ore yielded 43 percent of the State total silver in 1939, gold ore 38 percent, and silver ore 15 percent. Ore treated at straight concentration plants yielded 58 percent of the

silver, ore smelted 29 percent, and ore cyanided nearly 13 percent. The Holden mine in Chelan County was again the chief silver producer in Washington, followed by the Aurum and Knob Hill mines at Republic and the Arlington mine in Okanogan County.

WYOMING

Wyoming mines yielded only 583 fine ounces of gold and 75 fine ounces of silver in 1939, the lowest in any year since 1932. The bulk of the output came from placer mines in the Atlantic City district, Fremont County. The E. T. Fisher Co. operated its 1¼-cubic yard dragline and land dredge for the seventh consecutive season on placer ground in this district and produced most of the State output of gold and silver. During the year lode mines yielded only 57 tons of ore, which contained 31 ounces of gold and 13 ounces of silver. The total production of gold and silver (in terms of recovered metals) in Wyoming from 1867 to 1939, inclusive, according to Chas. W. Henderson, has been 76,673 fine ounces of gold and 74,372 fine ounces of silver.

Distribution of the gold and silver production of the United States, in fine ounces, for 1939, as to sources of production

[Table furnished by the Bureau of Mines]

State	Gold			Silver		
		Placer mines				
	Lode mines	Floating connected-bucket dredges	All other	Dry and siliceous ores [1]	Lead ores [2]	Copper ores
	Ounces	*Ounces*	*Ounces*	*Ounces*	*Ounces*	*Ounces*

Total [6]	3, 338, 728	787, 731	546, 583	30, 494, 915	15, 482, 299	18, 396, 067

[1] Contains small quantity of silver from placer mines (177,435 ounces).
[2] Includes silver in lead, lead-copper, zinc, zinc-lead, zinc-copper, and zinc-lead-copper ores.
[3] Includes zinc-lead-copper ore from 1 mine in Utah; zinc-copper ore from Arizona.
[4] From galena concentrates containing silver, a by-product of fluorspar ores.
[5] From copper concentrates from magnetite-pyrite-chalcopyrite ore.
[6] Philippine Islands and Puerto Rico excluded. The Department of Agriculture and Commerce of the Philippine Islands, reports a revised production figure as of June 19, 1940, for the Commonwealth of the Philippines for the calendar year 1939: 1,001,223 ounces of gold from lode mines and 38,923 ounces from placers; also 1,317,908 ounces of silver from lode mines and 9,934 ounces from placers.

Refinery production (arrivals thereat) of gold mined in the several States and Territories in 1938 and 1939 with the increase and decrease in each for the latter year

[1] Value of gold in 1934 and thereafter calculated on basis of $35 per fine ounce; prior thereto on basis of $20.67+ per fine ounce.

[2] Value of silver calculated on the basis of the average amount per ounce returned to depositors of newly mined domestic silver; in 1934 at $0.64+ per fine ounce, in 1935 at $0.71875, in 1936 at $0.7745, in 1937 at $0.7735.

[3] Value of silver calculated on the basis of the amount per fine ounce returned to depositors of newly mined domestic silver produced in 1938, $0.6464+, and in 1939 $0.6787+.

Gold and Silver Used in Industrial Arts in the United States During the Calendar Year 1939

Issue by the mints and assay offices of gold and silver for industrial-arts use has very substantially lessened since the monetary price of gold was fixed at $35 per fine troy ounce and a one-fourth of 1 percent charge imposed, and the supplying of industry by commercial refiners of those metals has substantially increased. Previously the principal source of gold supply to industry was the mint service institutions.

The following table gives the value of the gold and the quantity of the silver bars issued by the Government institutions and private refineries during the calendar year 1939, with the classes of material from which they were made.

Gold and silver issued for use in the industrial arts during the calendar year 1939 [1]

Item	Issued by—	Gold	Silver
		Value	*Fine ounces*
Bullion	Mints and Assay Offices	316,365	358,528
Bullion in various forms	Private refiners and dealers	38,472,595	69,149,393
United States coin [2]	Banks, etc.		77,344
Total		38,788,960	69,585,265
Old jewelry, plate, scrap, etc., contained in private refineries and dealers' returns, and that returned to monetary use.		31,328,360	24,972,260
Net new material used in industry		7,460,600	44,613,005

[1] For explanation of calculation, see p. 48.
[2] Estimated; the quantity of silver is equal to 100,000 silver dollars.

Gold and silver furnished for use in manufactures and the arts, and classification of the materials used, since 1880

[1] Value of gold in 1934 and thereafter calculated on basis of $35 per fine ounce; prior thereto on basis of $20.67+ per fine ounce.

[2] Treated as having priority as regards issue or reissue.

Mint Issue of Fine Gold Bars for Industrial Use

(On value basis; see p. 48)

The value of the fine gold bars issued for industrial use in exchange for cash, by the United States mints at Philadelphia, San Francisco, and Denver, and the assay office at New York, during the calendar year 1939 was as follows:

Month	Value of bars issued	Month	Value of bars issued
1939:		1939—Continued.	
January	$27,925.51	September	$23,319.70
February	15,701.51	October	120,196.79
March	25,610.87	November	17,637.19
April	13,876.02	December	8,102.86
May	28,034.51		
June	13,110.31	Total	316,376.99
July	15,598.80		
August	7,262.92	Prior calendar year	239,992.87

ADDENDA TO REPORT OF THE DIRECTOR OF THE MINT

Bases Used for Mint Service Statistics

Gold and silver, as well as minor coinage metals, are accounted for by quantity as well as by value. Most of the published mint service statistics pertaining to such metals are on a primary quantity basis rather than a primary value basis because, in some degree, the value factor antedates the quantity factor, as when advance partial payments are made on large deposits of bullion or foreign coin pending determination by melt, assay, and computation, of the exact quantities and values of the materials deposited. The *quantity basis* comprises received bullion, the quantity and value whereof have been finally determined, whether or not paid for; also melted coin that has been reviewed and classified after having been received as withdrawn from monetary use. The *value basis* comprises received bullion, the quantity and value whereof have been finally determined, whether or not paid for; also received bullion to the value of advance payments thereon prior to making final determinations; and received but unreviewed coin that has been withdrawn from monetary use. To effect reconciliation between the quantity basis and value basis, from period to period, would require consideration also of prior period advances.

The tabulations of "Deposits and purchases" include received metal for which payment is made in bars bearing the Government stamp, as well as that paid for by check or in cash. In these tabulations the receipt classification item of "Domestic refinery bullion" includes that refined from new production of both domestic and foreign mines, also old or secondary source metals, with inconsiderable amounts from small refineries that work only old materials.

Gold and silver production estimates.—These estimates consist of arrivals at United States mints and assay offices and at privately owned refineries (bullion-producing plants), of gold and silver from mines within the States and Territories of the United States, including the production of the Philippine Islands which comes to the United States for reduction. The portion of this figure representing mint receipts is on the quantity basis.

Gold and silver consumption in industry.—These estimates comprise bar sales by the mints and assay offices for industrial use (partly estimated) plus similar items issued by private refiners, dealers (and manufacturers), as reported to the Mint Bureau, plus an estimate of domestic coin melted for industrial use; from the total of these is deducted the old jewelry, plate, scrap, etc., received by the same concerns, giving net new materials consumed.

Stock of domestic coin.—Consists of an estimate made in 1873 of gold and silver coin, the former of which was revised in 1907, with

annual addition of new coinage and reported imports, and deduction of withdrawn coin, reported exports, and an estimate for industrial use; from 1928 to 1933 the additional factor of gold coin "earmarked," or set aside for foreign owners, was considered, such transactions being equivalent to exports and releases thereof being equivalent to imports. After 1933 gold coin has been omitted as such; any unmelted gold coin on hand is treated as bullion. In 1928 minor coin was added, using only the 5-cent nickel and 1-cent bronze coins of the type commonly in circulation and considering only the amounts coined and those withdrawn for recoinage. The monetary stock tables for a series of years have been revised back to the establishing of the Federal Reserve System (1914) to include earmarked gold, and to include minor coin back to 1900. The item of coin withdrawn as used in the stock compilation omits the coin received for recoinage but not yet reviewed, which coin is subject to classification adjustments.

Domestic coin made.—These data cover the coin delivered from the manufacturing department to the issuing (cash) division, and include the new coin made from withdrawn old coin, as well as all other newly made coin. It is now required that all coins be delivered to the cash division during the year impressed on such coins; during the earlier years this was not always done.

Number of gold and silver deposit transactions and assay determinations during the fiscal year 1940

[1] The Deficiency Act of June 27, 1940, provided $1,608,000 for transportation of bullion and coin for the fiscal year 1940 to remain available until June 30, 1941. No portion of this amount was obligated during the fiscal year 1940, leaving the entire amount available for the fiscal year 1941.
[2] Chargeable as indicated below (in parentheses) to the several offices.
[3] Includes $306,000 made available by deficiency appropriation act approved Apr. 6, 1940.
[4] Contains $26,520.19, charges on special gold movement San Francisco to Denver.
[5] Charges on special silver shipment New York to West Point.

[1] For 1934 and thereafter includes silver bullion revalued to $1.29+ per fine troy ounce and set up as security against silver certificates.

[2] On Jan. 31, 1934, the weight of the gold dollar was reduced from 25.8 grains of gold nine-tenths fine to 15 5/21 grains nine-tenths fine, thereby giving gold a monetary value of $35 per fine troy ounce, which compares with the previous $20.67+ per fine troy ounce. Proclamation of Jan. 31, 1934.

Stock of domestic coin in the United States, Dec. 31, 1939 [1]

On December 31, 1939, the stock of domestic coin in the United States was $1,115,481,583 as shown in the table below:

Item	Silver	Minor	Total
Estimated stock of coin in United States Dec. 31, 1938	$923,305,888	$159,057,050	$1,082,362,938
Coinage executed, calendar year 1939	27,913,498	10,375,672	38,289,170
Imports, United States coin, calendar year 1939	294,328		294,328
Total	951,513,714	169,432,722	1,120,946,436
Less:			
Exports, United States coin, calendar year 1939	66,738		66,738
United States coin withdrawn from monetary use, calendar year 1939, face amount	4,807,949	490,166	5,298,115
United States coin used in the industrial arts, and general disappearance, estimated, calendar year 1939	100,000		100,000
Total	4,974,687	490,166	5,464,853
Estimated stock of coin in United States Dec. 31, 1939	946,539,027	168,942,556	1,115,481,583

[1] For method of estimating, see p. 48.

NOTE.—The number of standard silver dollars coined from 1878 to Dec. 31, 1939, was 847,629,915 which, added to Hawaiian dollar coinage, 500,000, plus the number imported from the Philippine Islands, 150,000, and the number returned in Government transports, 496,859, equals 848,776,774. Since July 1, 1898, the number of standard silver dollars exported in transports has been 2,495,000; the net export from November 1919 to July 1920 in movement due to the high price of silver was 28,287,142; those melted under the terms of the Pittman Act of Apr. 23, 1918, total 270,232,722; those melted otherwise (mutilated, etc.) since 1883 numbered 228,210, and the number of Hawaiian dollars melted to Dec. 31, 1939, was 455,329; a total disposition of 301,698,403, leaving in the United States on Dec. 31, 1939, 547,078,371 standard silver dollars and 399,460,656 dollars in subsidiary silver coin.

[1] Previous to 1914 (year Federal Reserve System established) figures are unrevised.
[2] Prior to 1934 gold monetary value was calculated on basis of $20.67+ per fine troy ounce; 1934 and thereafter calculated on basis of $35 per fine troy ounce.
[3] Includes coin in State and private banks as well as coin in tills and the hands of the public.
[4] Coin awaiting melting included with bullion item.

[1] Data for individual years published in reports of the Director of the Mint for 1931 and for prior years.

NOTE.—Net exports are shown with a prefixed minus sign. The quantities in the column "Net imports" for both gold and silver for the years 1873–74 to 1886–87 are estimated only, deducted from the declared values of the trade for those years by the following process:

For gold, the rupee value of the monthly net imports was converted into sterling at the average rate of exchange in each month, and this sterling value was then divided by the English mint price of gold (£3 17s. 10½d.). For silver the average price of 107 rupees per 100 toals, or 285.33 rupees per 100 ounces, was taken as the basis of the value of the annual imports.

Price of silver in London and in New York, 1939–40

Month	London price per ounce, 0.925 fine			Average monthly exchange, New York on London	United States equivalent, per fine ounce, of London price, at current rate of exchange	Average monthly New York price of fine bar silver, per ounce (mean of bid and asked quotations)

NOTE.—From 1687 to 1832 the ratios are taken from Dr. A. Soetbeer, from 1833 to 1878 from Pixley and Abell's tables, from 1879 to 1896 from daily cabled prices from London to the Bureau of the Mint, from 1897 to 1914 from daily London quotations, and since from daily New York quotations.

FOREIGN AND WORLD MONETARY STATISTICS

The statistics of foreign countries on production and coinage of gold and silver and stocks of money, published annually in the reports of the Bureau of the Mint, are obtained, so far as practicable, directly from the governments of such countries by the representatives of the United States accredited to them.

Interrogatories covering the points on which information is sought are sent yearly to the United States Ambassadors and Ministers through the Department of State, and the replies in the form of reports are forwarded directly to the Bureau of the Mint.

Receipts of replies to the interrogatories are frequently delayed in transmission, and the available data for the calendar year under review are usually incomplete. In a general way interrogatory answers are herein published as received, with the addition of equivalents. If inaccuracies are apparent, information that would warrant the making of possible corrections is often unavailable.

In the absence of dependable official returns from foreign countries the most reliable data available are used in compiling world statistics.

COINAGE OF NATIONS

REVISIONS, 1938 MONETARY STOCKS

Principal revisions and changes of data relative to monetary stocks for 1937, published in last year's volume, are as follows:

Bolivia's gold stock reduced from $3,486,000 to $3,118,557.

Brazil's paper circulation increased from 4,810,000,000 milreis to 4,825,251,519 milreis.

British West Africa's paper circulation reduced from 2,890,776 pounds sterling to 2,506,982; silver stock as $5,463,284 instead of $7,005,000.

China's notes issued by leading Chinese banks as of June 1938 was $1,726,997,835. (Source: The Central Bank of China Bulletin, Summer 1940, Volume VI, Number 2.)

Greece's paper circulation reduced to 7,238,722,200 drachmas from 7,239,000,000 drachmas; gold stock as $34,064,820 instead of $32,886,000; silver stock as $1,305,248 instead of $2,610,495.

United States' silver stock as $2,595,594,558 instead of $5,367,771,000.

Yugoslavia's gold stock as $56,906,520 instead of $56,955,000; silver stock as $20,711,748 instead of $22,143,000; paper circulation as 6,920,702,300 dinar instead of 6,921,000,000 dinar.

WORLD'S MONETARY STOCKS OF GOLD, SILVER, AND PAPER MONEY AT THE CLOSE OF THE YEAR 1939

208557—40——7

The following compilations have been made from answers to official questionnaires of the United States Mint Bureau, central bank reports, and other official sources, except as indicated by footnote.[1] It is understood that material amounts of gold are not reported by several countries, such as amounts held in secret funds for stabilizing currencies and those hoarded or held outside of regularly reported stocks. The amount of silver in circulation in many countries is not obtainable. Population figures are principally those supplied by the Bureau of Foreign and Domestic Commerce, United States Department of Commerce.

Monetary stock of principal countries of the world, end of calendar year 1939 (subject to revision)

[Stated in United States money (000 omitted), except paper circulation, which is stated in monetary unit of issuing country (000 omitted). $1=15\frac{5}{21}$ grains of gold 9/10 fine: i. e., an ounce of fine gold=$35. Population (000 omitted)]

[2] Exchange rates have been given insofar as obtainable; in some cases they are nominal.
[3] Includes any paper currency held outside the continental limits of the United States.
[4] Continental United States only.
[5] Bases used for conversions of gold holdings to United States dollars:
Canada, holdings of Government Treasury converted at legal parity; holdings of Bank of Canada reported at current market rate.
Ecuador, revaluation of June 13, 1936, at rate of 11.6466 sucres per gram of fine gold (United States equivalent $0.0966).
Estonia, revaluation of Mar. 6, 1939, at 0.2802 gram of fine gold per kroon ($0.315303).
Finland, revaluation of Dec. 22, 1938, at the rate of 50,000 marks per kilogram of fine gold (United States equivalent $0.0225).
France, gold holdings of the Bank of France revalued by decree of Nov. 12, 1938, at 27.5 milligrams of gold 0.900 fine (United States equivalent, $0.027851).
Japan, gold revaluation effective Aug. 25, 1937, at 0.29 gram fine gold peryen (United States equivalent, $0.32633).
Latvia, revaluation of Jan. 1, 1937, on the basis of the price of gold in terms of sterling in London (25.22 lats=£1 sterling) (United States equivalent, $0.1960).
Rumania, revaluation of Nov. 6, 1936, at the rate of 153,333.33 lei per kilogram of fine gold (United States equivalent, $0.0073).
Switzerland, revalued in September 1936, at 0.215 gram of fine gold per franc (United States equivalent, $0.2419).

[6] Net issues of silver coin.

[7] Colombia law of Nov. 19, 1938, established new gold content of peso at 0.507816 gram of fine gold (United States equivalent, ($0.5714).
France, law of Oct. 1, 1936, provided for new gold content of franc to be fixed within limits of 43 and 49 milligrams of gold 0.900 fine. This law was superseded by decree of June 30, 1937, which stated that gold content of the franc shall be fixed ultimately by a decree adopted by the Council Ministers. Until issuance of such decree a stabilization fund shall regulate the relationship between the franc and foreign currencies.
Indo-China, French, monetary unit, the piaster, has a par value of 10 French francs.
Latvia, law of Sept. 28, 1936, pegged the lat to sterling at 2,522 lati to £100.
Mexico, decree of Aug. 28, 1936, left the monetary unit, the peso, to be later defined by law.
Switzerland, order of Federal Council enacted Sept. 27, 1936, instructed the Swiss National Bank to maintain the gold parity of the Swiss franc at a value ranging between 190 and 215 milligrams of fine gold.
Syria, monetary unit, the Syrian pound, has a par value of 20 French francs.
Uruguay, monetary unit, the peso, established by monetary law of Jan. 12, 1938, at 0.585018 gram of pure gold (United States equivalent, $0.6583).

[8] Includes silver bullion.
[9] United States coin and currency also circulate.
[10] United States currency is circulating media.
[11] Silver in circulation not included.
[12] Exclusive of Canadian bank notes which are the principal circulating media.
[13] Includes Tobago.
[14] Data not available.
[15] Includes base metal coin.
[16] As of Oct. 31, 1939.
[17] At average exchange rate for 1939.
[18] Exclusive of British coins and currency which still circulate in Erie.
[19] On Dec. 29, 1939.
[20] On Dec. 7, 1939.
[21] Spanish bank notes and coin also circulate.
[22] On Dec. 27, 1939.
[23] On Dec. 25, 1939.
[24] Average exchange rate for 1939.
[25] Prior years' figures at new equivalents where equivalents other than the legal parity are applicable.
[26] Silver coins in Central Banks only.
[27] Of which 146,113 is legal tender in Burma.
[28] As of November 1939.
[29] As of Nov. 21, 1939.
[30] On June 30, 1939.
[31] Including silver.
[32] Converted from British pounds; and from stated kilograms.
[33] Includes 453,308 British sterling converted to escudos at 110 to the pound.
[34] Includes notes in circulation in Northern Rhodesia and in Nyasaland.
[35] Indo-China notes are the circulating media.
[36] Australian coins and notes are the circulating media.

WORLD PRODUCTION OF GOLD AND SILVER

[The production figures given below are based upon the unpublished data, principally interrogatory replies, in the files of the Bureau of the Mint]

[1] Average price per fine ounce in New York.
[2] Estimate based on imports of ore and bullion into United States and Great Britain, and interrogatory data.
[3] Data from Yearbook of the American Bureau of Metal Statistics.
[4] Prior years' figure.
[5] Estimated or partly estimated.
[6] U. S. Bureau of Mines.
[7] Amount exported.
[8] Conjectural.
[9] Including Austria.
[10] Information not available for 1939.
[11] Including production for Portugal.
[12] Including Burma.
[13] Including Manchuria.
[14] Estimate based on other years' production.

Production of gold and silver in the world since the discovery of America

[From 1493 to 1885 is from a table of averages for certain periods, compiled by Dr. Adolph Soetbeer; for the years since, the production is the annual estimate of the Bureau of the Mint]

Period	Gold				Silver				Percentage of production			
	Annual average for period		Total for period		Annual average for period		Total for period		By weight		By value	
	Fine ounces	Value	Fine ounces	Value [1]	Fine ounces	Commercial value [2]	Fine ounces	Commercial value [2]	Gold	Silver	Gold	Silver

[1] Valued, prior to 1934, at $20.67+ per fine ounce; 1934 and thereafter, at $35 per fine ounce.

[2] Valued, prior to 1701, at $1.38 per fine ounce, which corresponds with a commercial ratio of silver to gold of approximately 15 to 1, the ratio which prevailed for over 100 years subsequent to 1687, as per tabulation elsewhere in this volume. From 1701 to 1840 the value corresponds with the average ratios of silver to gold as per the tabulation elsewhere in this volume. From 1841 the annual averages per fine ounce in London are used except for the years 1915 to 1921, and 1931 to 1939, when New York prices are used. Tabulations of silver quotations appear elsewhere in this volume.

REPORT OF THE DIRECTOR OF THE MINT ON THE OPERATIONS OF THE MINT SERVICE FOR THE FISCAL YEAR 1942

ANNUAL REPORT OF THE DIRECTOR OF THE MINT

TREASURY DEPARTMENT,
BUREAU OF THE MINT,
Washington, D. C., September 1, 1942.

SIR: In compliance with the provisions of section 253, title 31, United States Code, I have the honor to submit herewith a report covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1942, being the Seventieth Annual Report of the Director of the Mint. There is also submitted for publication in connection therewith the annual report of this Bureau upon the production and consumption of the precious metals in the United States for the calendar year 1941.

OPERATION OF THE MINTS AND ASSAY OFFICES

Institutions of the Mint Service

During the fiscal year ended June 30, 1942, seven mint institutions were in operation: Coinage mints at Philadelphia, San Francisco, and Denver; assay office at New York, which handles the major portion of the gold imported and exported, and its auxiliary silver bullion depository at West Point; gold bullion depository at Fort Knox, Ky.; mint at New Orleans, conducted as an assay office; and assay office at Seattle. The two last-named institutions are, in effect, bullion-purchasing agencies and also serve the public by making assays of ores and bullion. Electrolytic refineries are maintained at the New York, Denver, and San Francisco institutions.

The mint at New Orleans, originally established in 1835, was discontinued as of June 30, 1942. The appropriation granted for operation of the mints and assay offices during the fiscal year 1943 did not provide funds for operation of the New Orleans Mint.

Coinage

Domestic coin manufactured during the fiscal year ending June 30, 1942, amounting to 2,114,890,662 pieces, exceeded the production of any previous fiscal year in the history of the Government. The nearest approach to this production was 1,599,349,007 pieces in the fiscal year 1941; and during the fiscal year 1940, 768,090,830. As in previous years, the coin most largely produced was the 1-cent piece. The production in 1942, in amount $111,006,180.40, consisted of 449,336,162 subsidiary silver coins, $85,307,259.40; 226,084,400 nickel coins, $11,304,220; and 1,439,470,100 bronze coins, $14,394,701.

Coinage for foreign governments amounted to 281,050,000 pieces, compared with 170,672,500 pieces during the prior year. The foreign coinage consisted of silver and bronze coins for Australia, Netherlands Government, and Peru.

The grand total of domestic and foreign coins made in 1942 amounted to 2,395,940,662 pieces, an increase of 625,919,155 over the prior year.

Minor Coinage Alloys

Manufacture of the nickel-copper 5-cent coin was discontinued in May 1942 by reason of the need of those metals for other uses in connection with the war effort. The Second War Powers Act, 1942 (March 27, 1942) contained provision for a 5-cent coin of half silver and half copper, with authority to vary those proportions and to add other metals if in the public interest. An effect of this law would be to save for war use all the nickel and one-third the copper contained in the alloy previously used—25 percent nickel and 75 percent copper. A satisfactory alloy for the 5-cent coin—one that would produce a coin acceptable for operating the many vending and slot machines in use, as well as for other purposes—had not been determined upon at the end of the fiscal year.

At the end of the year consideration was also being given the subject of substitutes for the alloy in the 1-cent coin—95 percent copper, 5 percent tin and zinc, and to other measures for conserving, for war use, metals heretofore used in manufacture of coin.

Bullion Deposit Transactions

The number of bullion deposit transactions during the year totaled 35,521, including 83 inter-mint-service transactions, as compared with 48,147 and 75, respectively, during the prior year. The deposit transactions required 52,406 assay determinations, which compares with 74,716 assay determinations during the prior year.

Transfer of Bullion for Long-Term Storage

Refined gold bullion having a value of approximately $1,004,500,000 was transferred during the fiscal year 1942 from the New York Assay Office to the bullion depository at Fort Knox, and approximately $1,189,900,000 in refined, and unrefined, gold bullion was transferred from the mint at San Francisco to the mint at Denver for long-term storage.

The balance of silver bullion in the bullion depository at West Point remained unchanged at 1,542,697,791 fine ounces, all of which was transferred from Government buildings and rented quarters in New York City since completion of the depository in 1938.

Silver bullion, in quantity 4,817,828 fine ounces, was delivered in June 1942 to the Defense Plant Corporation under the terms of a contract dated May 6, 1942, providing (in effect) for loan of about one billion ounces of silver to be used as a substitute for copper or other strategic materials in plants that are engaged in, or are essential to, the war effort. Its principal use is understood to be in busbars, for transmission of electric current. This silver is to be returned to Treasury custody under the terms of the contract, after it has performed its function.

Gold Operations

Gold acquisitions by the mints and assay offices during the year, stated on the usual basis of classified melted receipts, amounted to

$664,440,587; receipts from other Treasury offices of domestic coin melted during the year amounted to $470,600; and transfers between mint-service institutions amounted to $2,226,584,768. These transactions total $2,891,495,955, compared with $12,938,276,121 for the prior year.

The acquisitions include $10,854 of gold received at $20.67+ per fine ounce. The increment on this gold amounted to $7,523.

Silver Operations

The Government's acquisitions of silver during the year totaled 122,712,671 fine ounces, at an average cost of 57.2 cents per fine ounce and a total cost of $70,230,843. The acquisitions consist of the following:

Item	Amount (fine ounces)	Cost
Newly mined domestic silver	68,512,907.50	$48,681,543.77
Purchase Act silver	53,414,124.16	21,282,146.90
Silver contained in gold bullion deposits, etc	257,495.27	87,582.83
Silver received in exchange for Government-stamped bars	528,144.23	179,569.09
Total	122,712,671.16	70,230,842.59

United States coin received for recoinage totaled 1,828,660 fine ounces, with a recoinage value of $2,527,955. Silver deposited by other governments, for foreign coinage, totaled 7,345,556 fine ounces. Silver transfers between mint-service institutions totaled 4,625,656 fine ounces. These items plus the silver acquired during the year brought the total transactions in silver to 136,512,543 fine ounces, compared with the prior year's total of 273,974,554.

During the year 1942, $69,934,545 of silver certificates were issued against 54,090,000 fine ounces of silver bullion valued at $1.29+ per fine ounce, the statutory monetary value of silver. Such silver had been acquired at an average price of 63+ cents per ounce. The difference between the cost of the silver held to secure such certificates and the monetary value of such silver is $35,458,194, and this amount constitutes seigniorage.

The open-market price of silver in New York (mean of bid and asked) during the fiscal year 1942 averaged $0.35284. The price remained unchanged at $0.35062 from July 1, 1941, to November 28, 1941, when it advanced to $0.35437, which price prevailed, without change, through June 30, 1942.

For newly mined domestic silver a return to the depositor of $0.7111+ per fine ounce, established by the act of July 6, 1939, prevailed during the fiscal year 1942.

Refineries

The electrolytic refineries produced during the year 7,749,270 fine ounces (265.7 tons) of electrolytically refined gold bullion and 6,272,610 fine ounces (215.1 tons) of silver bullion. During the prior year the quantities produced were 7,508,837 fine ounces (257.4 tons) of gold and 5,073,331 fine ounces (173.9 tons) of silver.

Stocks of unrefined gold and silver bullion in mint institutions decreased during the fiscal year 1942 by approximately 99.5 tons, leaving a total of 2,051.6 tons. There was an increase in 1941 of about 78.1 tons.

Stock of Coin and Monetary Bullion in the United States

On June 30, 1942, the estimated stock of domestic coin in the United States was $1,301,639,122, of which $547,077,254 was standard silver dollars, $529,814,276 subsidiary silver coin, and $224,747,592 minor coin.

The stock of gold bullion, including coin, held in the Treasury on the same date was valued at $22,736,704,552, an increase of $112,506,840, and the stock of silver bullion was 2,524,328,815 fine ounces, an increase of 33,194,358.

Production of Gold and Silver

Domestic gold production during the calendar year 1941 was 5,976,419 fine ounces, with a monetary value of $209,174,600, compared with 6,003,105 fine ounces, with a monetary value of $210,108,700 in 1940, which was the previous year of largest production.

Domestic silver production during the calendar year 1941 totaled 72,336,029 ounces. This compares with 69,585,734 ounces for 1940 and with the record production of 74,961,075 fine ounces for 1915.

Industrial Consumption of Gold and Silver

Gold consumption in the industrial arts during the calendar year 1941 is estimated at $67,977,110. Gold returned from industrial use amounted to $30,975,490. These items give a net industrial consumption of new gold during the year of $37,001,620, compared with $13,306,032 during the calendar year 1940.

Silver used in the arts is estimated at 92,793,574 fine ounces, of which 72,432,318 fine ounces were new material.

Compared with the prior year, there was an increase in gold consumption of approximately 765,700 ounces and an increase in silver consumption in industry of about 25,700,000 ounces.

Appropriations, Expenses, and Income

Regular appropriations available for the mint service during the fiscal year 1942 totaled $3,512,840; the First Deficiency Appropriation Act of February 21, 1942, provided $1,895,900, $500,000 of which was for special movements of bullion during the fiscal year 1942, to remain available until June 30, 1943; the Third Supplemental National Defense Appropriation Act, 1942, provided $6,335; and reimbursements to appropriations for services rendered amounted to $1,107,534.64, making a total of $6,522,609.64.

Expenses amounted to $6,294,712, of which $5,847,733 was chargeable to appropriations and $446,979 chargeable to income.

The regular income realized by the Treasury from the mint service aggregated $69,025,597, of which $65,583,203 was seigniorage. The seigniorage on subsidiary silver coin was $42,354,043, and on minor

coin, $23,229,160. Extraordinary income aggregated $35,465,717, of which $35,458,194 was seigniorage on silver bullion revalued to $1.29+ per ounce, and $7,523 was the increment to $35 per ounce on revalued gold.

General Activities

The number and value of deposits, transfers, gross income, and expenses for the fiscal year 1942, and number of employees on June 30, 1942, at each institution are shown in the following table:

Deposits of gold and silver, income, expenses, and employees, by institutions, fiscal year 1942

Institution	Number of bullion deposit transactions	Number of assay determinations on bullion deposits	Monetary value of gold and silver receipts, including transfers [1]	Gross regular income	Gross expenses	Excess of income (+) or of expenses (−)	Employees, June 30, 1942
Philadelphia	4,258	5,702	$18,445,203	$42,676,525	$2,784,974	+$39,891,551	958

[1] Includes interinstitution transactions, $2,232,565,414.

Domestic Coinage

Details of coinage executed during the fiscal year ending June 30, 1942, follow:

Denomination	Philadelphia Mint	San Francisco Mint	Denver Mint	Total value	Total pieces
Silver:					
Half dollars	$15,876,565.00	$6,076,000.00	$6,428,000.00	$28,380,565.00	56,761,130
Quarter dollars	18,776,752.00	5,186,000.00	5,485,900.00	29,448,652.00	117,794,608
Dimes	13,918,042.40	5,593,000.00	5,967,000.00	27,478,042.40	274,780,424
Total silver	50,571,359.40	16,855,000.00	17,880,900.00	85,307,259.40	449,336,162
Minor:					
5-cent nickels	7,924,220.00	1,439,000.00	1,941,000.00	11,304,220.00	226,084,400
1-cent bronze	10,702,301.00	1,471,700.00	2,220,700.00	14,394,701.00	1,439,470,100
Total minor	18,626,521.00	2,910,700.00	4,161,700.00	25,698,921.00	1,665,554,500
Total domestic coinage	69,197,880.40	19,765,700.00	22,042,600.00	111,006,180.40	2,114,890,662
Prior year:					
Total coinage, value	$51,679,270.07	$11,012,850.00	$12,295,300.00	$74,987,420.07	
Total coinage, pieces	1,193,923,207.00	187,961,000.00	217,464,800.00		1,599,349,007

Coinage by the United States for Other Countries

The coinage for other countries during the fiscal year 1942 totaled 281,050,000 pieces, as compared with 170,672,500 pieces during the prior fiscal year, as follows:

Country	Philadelphia	San Francisco	Total
Australia: Silver		15,500,000	15,500,000
Netherlands Government:			
East Indies:			
Silver	17,997,000	136,643,000	154,640,000
Bronze	100,000,000		100,000,000
Curaçao:			
Silver	800,000		800,000
Bronze	500,000		500,000
Surinam:			
Silver	1,600,000		1,600,000
Bronze	1,000,000		1,000,000
Peru: Bronze	7,010,000		7,010,000
Total coinage	128,907,000	152,143,000	281,050,000
Prior fiscal year, total coinage	62,112,500	108,560,000	170,672,500

Mint Issue of Fine Gold Bars for Industrial Use

[On value basis; see p. 48]

The value of the fine-gold bars issued for industrial use, in exchange for cash, by the United States Mints at Philadelphia, San Francisco, and Denver, and the assay office at New York, during the fiscal year 1942, was as follows:

Month	Value of bars issued	Month	Value of bars issued
1941:		1942—Continued.	
July	$27,000.18	March	$94,846.94
August	21,207.51	April	111,888.83
September	35,291.90	May	62,291.69
October	594,391.90	June	579,282.27
November	217,153.11		
December	69,819.84	Total	1,871,068.75
1942:			
January	66,653.34	Prior fiscal year	307,134.36
February	61,260.18

[1] Net loss.

Wastage of Coinage Metal and Loss on Sale of Sweeps

The value of metals wasted in the operative departments during the fiscal year ended June 30, 1942, was $54,312.93. A loss of $5,027.18 occurred from the difference between the assay value of the bullion

contained in sweeps sold and the amount received for the same. Details are given in the following table:

Item	Mint at—			Assay Office at New York	Total
	Philadelphia	San Francisco	Denver		
Silver wastage: Coining department	$23,179.67	$3,729.79	$680.23		$27,589.69
Nickel wastage:					
Melting and refining department	5,612.32	500.41	271.01		6,383.74
Coining department	254.41	173.86	39.42		467.69
Bronze wastage:					
Melting and refining department	17,520.91	452.78	615.85		18,589.54
Coining department	1,188.57	36.33	57.37		1,282.27
Loss on sale of sweeps	1,574.25	2,257.29	1,000.66	$194.98	5,027.18
Total wastage and loss	49,330.13	7,150.46	2,664.54	194.98	59,340.11
Reimbursements:					
Nickel and bronze wastage on domestic coin, from minor coinage profits	24,576.21	1,163.38	983.65		26,723.24
Silver departmental wastage offset by other departmental surpluses	5,122.43	3,729.79	680.23		9,532.45
Other wastages and loss on sweeps, from appropriations	19,631.49	2,257.29	1,000.66	194.98	23,084.42
Total reimbursements	49,330.13	7,150.46	2,664.54	194.98	59,340.11

Employees

The total number of officers and employees of the Mint Service on June 30, 1942, was as follows:

Institution	Established under act of—	Employees, by departments									Total	
		General										
		Miscellaneous	Custodial: Guards	Custodial: Other	Mechanical	Deposits division	Engraving	Assaying	Coining	Melting and refining	June 30, 1942	June 30, 1941
Bureau of the Mint	Feb. 12, 1873	50									50	53
Philadelphia Mint	Apr. 2, 1792	66	69	39	85	20	18	12	476	173	958	1,207

[1] Conducted as an assay office since 1910. Discontinued June 30, 1942. The appropriation granted for operation of the mints and assay offices during the fiscal year 1943 did not provide funds for operation of the New Orleans Mint.

[2] Allotment made from a lump construction appropriation.

Assay Commission's Annual Test of Coin for 1941

Section 363, title 31, United States Code, provides for an annual test of the domestic coinage executed during each calendar year by a commission, of whom part are ex officio members, the others, who serve without compensation, being appointed by the President. The

purpose is to secure a due conformity in the gold and silver coins to their respective standards of fineness and weight. The Commission, which met at the Philadelphia Mint February 11, 1942, reported the following results of their examination of the 1941 coinage:

In accordance with section 3539 of the Revised Statutes, your committee on counting reports that the packages said to contain the pieces reserved by the several mints for the trial of coins were delivered to us by the Superintendent of the Mint at Philadelphia. Verification of the coins reserved were made by checking same against the original record of coin deliveries and reservations for assay in respect to the Philadelphia Mint, and against transcripts furnished the committee showing reservations for assay from the Denver and San Francisco Mints.

A substantial number of packages were selected from the deliveries of each month of all denominations coined, and the coins contained therein were counted and found to agree with the number designated on each envelope.

The committee on assaying has completed the assays on samples taken from the different lots of coin, representing all denominations of silver coined during the calendar year 1941 by the United States Mints at Philadelphia, San Francisco, and Denver.

No gold was coined at any of the mints during the year 1941.

The results of assays upon coins and mass melts of coins are satisfactory, being well within the legal limits of tolerance, which is three one-thousandths for silver coin.

The highest and lowest assays on individual silver coins were as follows:

	Highest	*Lowest*
Philadelphia Mint	900. 8	898. 6
San Francisco Mint	900. 4	898. 9
Denver Mint	900. 6	898. 6
Mass melts:		
Philadelphia Mint	899. 5	
San Francisco Mint	899. 3	
Denver Mint	899. 1	

The committee on weighing reports that it has weighed a total of 146 coins, comprising 96 coins from the Philadelphia Mint, 27 coins from the Denver Mint, and 23 coins from the San Francisco Mint. These coins were selected at random; however, with respect to the number of coins selected, an effort was made to proportion the selections from the several mints approximately according to their total productions, and to proportion the selections of the three denominations of coins minted approximately according to the production of each denomination at each mint.

The coins were weighed directly against a set of coin weights and grain weights tested and certified by the National Bureau of Standards and delivered under seal to the chairman of the committee on weighing, values of less than 0.1 grain being determined by means of the rider weights on the beam of the balance. Before any weighings were made, the balance used in the weighings was tested for sensitiveness and equality of arms and for the accuracy of its rider indications, and it was found to be well suited to the weighing of the coins to the desired precision of 0.01 grain.

The weights of all coins weighed were determined to a precision of 0.01 grain, and all individual deviations from nominal values were found to be within the legally established tolerances.

The following table shows the deviations from the standard values of the heaviest and lightest coins of each denomination from each mint as determined from the individual weighings:

Denomination	Legal deviation allowed	Actual deviation					
		Philadelphia		Denver		San Francisco	
		Heavy	Light	Heavy	Light	Heavy	Light
1941	*Grains*	*Grains*	*Grains*	*Grains*	*Grains*	*Grains*	*Grains*
Half dollar	1.5	0.88	0.66	0.27	0.71	1.35	0.01
Quarter dollar	1.5	0.82	0.79	0.18	0.72	0.80	0.85
Dime	1.5	0.53	0.74	0.74	0.38	0.64	0.39

Considering the entire group of 146 coins weighed, it was found that the average deviation with regard to sign was 0.033 grain; that is, the difference between the total excess of the heavy coins and the total deficiency of the light coins represented an average of 0.033 grain per coin. The average deviation without regard to sign was 0.294 grain.

The foregoing report, covering the operations of the mints and assay offices of the United States for the fiscal year ending June 30, 1942, is respectfully submitted.

NELLIE TAYLOE ROSS,
Director of the Mint.

Hon. HENRY MORGENTHAU, Jr.,
Secretary of the Treasury.

REPORT OF THE DIRECTOR OF THE MINT ON THE PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1941

REPORT ON PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1941

INTRODUCTION

The official estimate of the production of gold and silver in the United States is made by the Bureau of the Mint with the cooperation of the Bureau of Mines, the latter making a mine canvass in each State and the former working backward from mint deposits through refineries, smelters, and other reduction works to the mine production estimate made by the former. The official estimate represents the material received at mint service offices and private refineries. The difference between this estimate and the mine production estimate is almost entirely due to the time element involved in the reducing processes, since differences for series of years are shown by comparison to practically offset each other. The two systems thus verify and support each other.

The gold production of the United States, including its insular dependencies, for the calendar year 1941 is estimated to have been 5,976,419 fine ounces, valued at $209,174,600, and the production of silver as estimated at 72,336,029 fine ounces, valued at $51,438,954. A comparison of these figures with those of 1940 indicates about 27,000 fine ounces decrease in production of gold and approximately 2,750,000 ounces increase in silver production.

California maintained in 1941 its position of being the State of largest gold production, with 1,431,637 ounces. The Philippine Islands, about 1,144,000 ounces; Alaska, 696,000, and South Dakota, 612,000, followed, in order. South Dakota made the largest increase over the prior year, by about 25,000 ounces, with Utah 20,000 ounces and Arizona and Colorado 18,000 ounces each. The largest decrease occurred in Alaska, about 59,000 ounces, with Montana, 21,000 ounces, and Oregon, 18,000 ounces.

The State of largest silver production in 1941 was Idaho, with about 17,000,000 ounces; Utah, 13,000,000, and Montana, 12,700,000 followed, in order. The largest increase over 1940 production occurred in Arizona, about 1,580,000 ounces, Utah ranking second, 1,375,000 ounces. The largest reduction occurred in Colorado, about 740,000 ounces.

A brief review of mining conditions, for which acknowledgments are made to the United States Bureau of Mines, follows. The production figures therein differ, as explained above, from the Bureau of the Mint production estimates. Further information concerning same can be obtained by those interested by addressing the Bureau of Mines at Washington.

ALASKA

The production of gold from ores and gravels in Alaska in 1941 was 695,467 fine ounces, valued at $24,341,345, which has been exceeded

only once (by the peak year of 1940), according to Charles W. Henderson and A. J. Martin, United States Department of the Interior, Bureau of Mines.

As there are no smelters or refineries in Alaska, the bulk of the gold produced in 1941 was in the form of bullion and dust sent to the United States mints and assay offices, either direct or through banks and bullion buyers located at the large centers throughout Alaska. The rest was contained in high-grade ores and concentrates sent to the Selby (Calif.), and Tacoma (Wash.) smelters.

Forty-seven floating connected-bucket dredges produced 44 percent of the total gold output. The United States Smelting, Refining & Mining Co., operating eight dredges at Fairbanks and four at Nome, was the largest producer of gold from this source in the Territory.

Seven hundred fifty-two placer mines worked by dragline and dry-land dredges, bulldozers and hydraulic giants, drifting, and sluicing together yielded 27 percent of the total gold in 1941.

Fifty-six lode mines produced 29 percent of the total Alaska output of gold. The Alaska Juneau Gold Mining Co., at Juneau, continued to be the largest producer of lode gold, and the Alaska-Pacific Consolidated Mining Co., operating in the Willow Creek District, was second. Ore-reduction mills active in Alaska in 1941 included the 12,000-ton Alaska Juneau amalgamation-table concentration-flotation mill and about 45 other mills (chiefly amalgamation or cyanidation mills, with supplementary concentrating equipment) with reported daily capacities ranging from 2 to 72 tons. Of the 4,480,508 tons of crude ore produced, over 99.99 percent was dry and siliceous ore, and only 0.003 percent was copper ore.

The output of silver, 191,522 fine ounces, valued at $136,193, was produced as a byproduct of gold mining in 1941. Lode mines produced 65 percent of the total, dredges 20 percent, and placers 15 percent.

The total production of gold and silver in Alaska, in terms of recovered metals, compiled from all sources by Charles W. Henderson, from 1880 to the end of 1941, has been 25,152,030 fine ounces of gold valued at $593,335,652 and 19,562,668 fine ounces of silver valued at $13,915,671.

ARIZONA

The value of the production of gold, silver, copper, lead, and zinc from mines in Arizona was $97,638,310 in 1941 compared with $82,167,759 in 1940—an increase of 19 percent; it was the greatest since 1929, when the total value was $155,567,133, according to G. E. Woodward and Paul Luff of the United States Department of the Interior, Bureau of Mines. There were substantial increases in both quantity and value of each of the five metals in 1941. The total value of the gold was $11,038,720, a 7-percent gain over 1940, and silver $5,332,096, a 6-percent gain. The value of the gold production represented 11 percent of the State total, silver 5 percent, copper 79 percent, lead 2 percent, and zinc nearly 3 percent. The total value of metals recovered from copper ore was $84,957,995 in 1941 or 87 percent of the State total. The output of placer gold (11,931 fine ounces) was the largest for any year since records were established in 1901 and resulted chiefly from the operations of two dragline floating dredges in Yavapai County.

The output of recoverable gold in Arizona in 1941 was 315,392 fine ounces, an increase of 7 percent over 1940. Gold from siliceous ores (chiefly dry and siliceous gold ore) and zinc-lead ore was virtually the same as in 1940, but gold from copper ore increased 13,778 ounces and that from lead ore 1,234 ounces. Gold from placers increased 5,690 ounces; 84 percent of the total placer gold was recovered by dragline dredging at properties on Big Bug Creek and Lynx Creek in Yavapai County. Siliceous ores yielded 46 percent of the State total gold, copper ore 45 percent, and zinc-lead ore 4 percent. Gold recovered from ores amalgamated amounted to 887 ounces, from ore and old tailings cyanided 77,627 ounces, from concentrates smelted 114,974 ounces, from crude ore sent direct to smelters 109,972 ounces, and from placers 11,931 ounces. The chief gold-producing districts in Arizona were the Warren (mostly copper ore), San Francisco (nearly all gold ore), Ajo (copper ore), Verde (mostly copper ore), Old Hat (nearly all gold ore), Weaver (Yavapai County) (gold ore), and Big Bug (mostly zinc-lead ore and placer gold). The Copper Queen (Bisbee) branch of the Phelps Dodge Corporation continued to be the leading gold producer in Arizona, and it was followed by the New Cornelia mine in Pima County, the Mammoth-St. Anthony Limited property in Pinal County, the Goldroad mine (United States Smelting, Refining & Mining Co.) in Mohave County, and the United Verde mine in Yavapai County. These five properties produced more than 58 percent of the State total output. Other large gold producers were the Magma mine in Pinal County, the Octave mine (American Smelting & Refining Co.) in Yavapai County, the Shattuck Denn mine in Cochise County, the Iron King mine in Yavapai County, the Tyro mine (Gold Standard Mines Corporation) in Mohave County, and the Congress property in Yavapai County.

The total gold production in the State of Arizona from 1860 to 1941, inclusive, in terms of recovered metals, has been 10,174,289 ounces.

The output of recoverable silver in Arizona in 1941 was 7,498,260 fine ounces—an increase of 6 percent over 1940. Silver from siliceous ores declined 182,504 ounces and that from zinc-lead ore 48,992 ounces, but silver from copper ore increased 542,672 ounces, that from lead ore 62,609 ounces, and that from zinc-copper ore 32,600 ounces. Copper ore yielded 67 percent of the State total silver, siliceous ores 16 percent, zinc-lead ore 12 percent, zinc-copper ore 3 percent, and lead ore 2 percent. The Phelps Dodge Corporation continued to be the chief silver producer in Arizona, and its output was 17 percent greater than in 1940; its four properties (Copper Queen, Morenci, New Cornelia, and United Verde) produced 40 percent of the State gold output, 54 percent of the silver, and 53 percent of the copper. Other large silver producers in Arizona in 1941 were the Magma, Shattuck Denn, Trench-Flux, Iron King, and Iron King-Equator properties. The chief silver-producing districts were the Warren (Bisbee), Verde (Jerome), Pioneer (Superior), Ajo, Harshaw, Big Bug, and Wallapai (Chloride); more than 56 percent of the total silver came from the Warren and Verde districts.

The total silver production for the State of Arizona, in terms of recovered metal, from 1860 to 1941, inclusive, has been 268,688,038 ounces.

CALIFORNIA

The gold output of California (in terms of recovered metal) in 1941 again exceeded that of the Philippine Islands, Alaska, and South Dakota, the other leading domestic producers in order of production, according to Charles White Merrill, of the United States Department of the Interior, Bureau of Mines. After an uninterrupted rise from 1929 to 1940, the quantity and value of California gold production in 1941 fell below that of the preceding year. The reversal in trend was due entirely to the decline in lode mining; placer-gold output continued to rise and exceeded that for any year since 1862.

The output of recoverable gold from California ores, gravels, and re-treated tailings in 1941 was 1,408,793 fine ounces valued at $49,307,755 compared with a production of 1,455,671 ounces valued at $50,948,485 in 1940; the decrease in both quantity and value was 3 percent. In 1941, 835 lode mines produced 690,780 ounces of gold valued at $24,177,300, and 724 placer mines produced 718,013 ounces of gold valued at $25,130,455. Placer mines supplied 51 percent and lode mines 49 percent of the total in 1941 compared with 48 percent for placer mines and 52 percent for lode mines in 1940; this was the first year since 1927 in which gold output from placers exceeded that from lode mines. Of the gold derived from lode operations, 94 percent was recovered from dry gold ore, 4 percent from dry gold-silver ore, and most of the remainder from copper ore. The importance of free-milling gold ore in California is indicated by metallurgical data, which show that 41 percent of the lode gold in 1941 (45 percent in 1940) was recovered by amalgamation; cyanidation of sands, slimes, old tailings, and concentrates represented 34 percent (32 percent in 1940); smelting of concentrates, 23 percent (22 percent in 1940); and smelting of ore, 2 percent (1 percent in 1940).

Dredging was the leading method of working placer deposits, both as to the yardage of gravel treated and the quantity of placer gold recovered. Floating dredges of the connected-bucket type handled 135,757,000 cubic yards of gravel and recovered 418,282 ounces of gold valued at $14,639,870, or 58 percent of the placer gold produced in the State in 1941. Dragline dredges (those having a floating washing plant to which gravel is delivered by a dragline excavator) handled 45,579,000 yards of gravel, which yielded 225,019 ounces of gold valued at $7,875,665. Nonfloating washing plants to which gravel was delivered by mechanical means treated 5,656,000 yards of gravel and recovered 28,703 ounces of gold valued at $1,004,605. Hydraulic mines produced 10,145 ounces of gold valued at $355,075 derived from 2,886,000 yards of gravel; 90,000 yards of gravel from drift mines were treated, from which 4,635 ounces of gold valued at $162,225 were recovered. Small-scale, hand-operated equipment, including small sluice boxes, long toms, dip boxes, rockers, pans, and dry washers, was used in the production of 29,222 ounces of gold valued at $1,022,770. Increases in 1941 compared with 1940 were recorded from all sources except hydraulic mines, small-scale hand operations, and drift mines.

Nevada County, because of the productivity of its Grass Valley-Nevada City district, continued to be the leading gold-producing county in the State. Despite a 10-percent decline in gold output in 1941 compared with 1940, the county yielded 20 percent of the State total gold and 39 percent of the State lode gold in 1941. The high

rank in gold production of Sacramento, Yuba, Butte, Siskiyou, Merced, Trinity, and Stanislaus Counties was attained largely from the output of placer gold, principally the product of connected-bucket and dragline dredges. Amador, Calaveras, Eldorado, and Mariposa Counties on the Mother Lode were important gold producers. Large gold outputs were also recorded for Kern, Shasta, Placer, and Plumas Counties.

The principal gold-producing mines in California in 1941, listed by operators and in order of output, were the Idaho Maryland Mines Corporation, Nevada County (gold ore); Natomas Co., Sacramento County (dredge); Empire Star Mines Co., Ltd., Nevada County (gold ore); Yuba Consolidated Gold Fields (Yuba unit), Yuba County (dredge); Lava Cap Gold Mining Corporation, Nevada County (gold ore); Yuba Consolidated Gold Fields (Butte unit), Butte County (dredge); Central Eureka Mining Co., Amador County (gold ore); Capital Dredging Co., Sacramento County (dredge); Golden Queen Mining Co., Kern County (gold ore); and Carson Hill Gold Mining Corporation, Calaveras County (gold ore).

Output of silver from California ores, gravels, and retreated tailings in 1941 was 2,154,188 fine ounces valued at $1,531,867 compared with a production of 2,359,776 ounces valued at $1,678,063 in 1940. Of the lode silver, 46 percent was derived from dry gold ore, 35 percent from dry gold-silver ore, 9 percent from copper ore, 8 percent from lead ore, and 2 percent from dry silver ore, tungsten ore, zinc ore, and lead-copper ore. A small quantity of silver was recovered as a byproduct of gold dredging. Smelting of flotation concentrates accounted for 45 percent of the lode silver recovered in the State; 37 percent was recovered by cyanidation of ore, old tailings, sands, slimes, and concentrates; 14 percent by direct smelting; 3 percent by amalgamation of ore and old tailings; and 1 percent by the smelting of gravity concentrates.

The principal silver-producing mines in California in 1941, listed by operators and in order of output, were the Cactus Mines Co., Kern County (gold-silver ore); Lava Cap Gold Mining Corporation, Nevada County (gold ore); Golden Queen Mining Co., Kern County (gold ore); Lodestar Mining Co., Kern County (gold ore); Walker Mining Co., Plumas County (copper ore); and Shoshone Mines, Inc., Inyo County (lead ore).

CENTRAL STATES

The mine output of silver from the Central States in 1941 was 448,824 ounces valued at $319,164 compared with 353,737 ounces valued at $251,546 in 1940, according to A. J. Martin, of the United States Department of the Interior, Bureau of Mines. No gold was recovered from mines in the Central States in 1941; the 5 ounces produced in 1940 came from a placer prospect in Vigo County, Ind. Of the total silver produced in 1941, 367,688 ounces were recovered in the refining of lead bullion obtained from southeastern Missouri lead concentrates; 60,796 ounces in the refining of copper bullion shipped from smelters in Michigan to eastern electrolytic refineries, and 20,340 ounces were contained in galena concentrates recovered in the milling of zinc-lead ore and fluorspar from Illinois.

COLORADO

Gold recovered in Colorado in 1941 totaled 380,029 fine ounces valued at $13,301,015, a 3-percent increase over 1940, and the highest production in the State since 1924, according to Charles W. Henderson and A. J. Martin, of the United States Department of the Interior, Bureau of Mines.

Of the 2,222,786 tons of crude ore mined, 1,970,253 tons were treated by mills in Colorado—1,379,077 tons were treated in company mills at mines and dumps, 532,127 tons by the Golden Cycle Custom roast-amalgamation-cyanidation-flotation mill at Colorado Springs, 59,049 by custom concentration mills in or near the mining districts. Gold was exceeded in value in Colorado in 1941 only by molybdenum.

The Cripple Creek district, Teller County, continued to be the principal gold-producing district in the State; it was followed, in order, by the Redcliff district, Eagle County; Upper San Miguel, San Miguel County; Mosquito, Park County; Leadville, Lake County; Animas, San Juan County; Summitville, Rio Grande County; Empire, Clear Creek County; Southern districts, Gilpin County; Idaho Springs, Clear Creek County; Gold Hill, Boulder County; Sneffels, Ouray County; and Fairplay, Park County—each of which yielded more than 10,000 ounces of gold. Dry and siliceous ores yielded 80 percent of the total gold; copper ore 7 percent; zinc-lead, lead, and lead-copper ores 5 percent; and placers 8 percent.

The output of 579 operating lode mines varied but little from 1940, but that from 324 placers increased 13,377 ounces (79 percent), owing mainly to production made from new dredging operations in Park County. The quantity of gravel handled in 1941 by 2 floating connected-bucket dredges, 1 dragline floating dredge, and 31 dry-land dredges was approximately 5,322,300 cubic yards averaging 18.74 cents to the yard. Specific data on yardage handled at the 290 small-scale placer operations are not obtainable.

The production of silver in 1941, in terms of recovered metals, was 7,301,697 fine ounces valued at $5,192,318. Eagle County continued to be much the largest silver producer, yielding 60 percent of the State total, followed by Mineral with 12 percent, San Juan 7 percent, and San Miguel 6 percent. Copper ore yielded 59 percent; dry and siliceous 30 percent; other types of ore, together with a small quantity of silver from placer mines, 11 percent.

The total production of gold and silver in Colorado, in terms of recovered metals, compiled from all sources by Charles W. Henderson, from 1858 to 1941, inclusive, has been 38,296,755 fine ounces of gold valued at $834,263,389 and 717,950,564 fine ounces of silver valued at $558,481,176. Colorado has produced more silver (lode and placer combined) than any other State and more lode gold.

EASTERN AND APPALACHIAN STATES

The mine output of recoverable gold in the Eastern and Appalachian States in 1941 was 21,982 fine ounces valued at $769,370, an increase of 19 percent over 1940 and the highest recorded for both quantity and value since 1882, according to A. J. Martin, of the United States Department of the Interior, Bureau of Mines. The total number of mines contributing to the output of gold in 1941 was

41, of which 27 were lode and 14 were placer mines. Lode mines yielded 21,779 ounces of gold and placers 203 ounces.

The old Haile mine near Kershaw, S. C., was again the leading producer of gold in the Eastern States. The mine has been operated continuously by Haile Gold Mines, Inc., since completion in June 1937 of a new 125-ton cyanide mill (capacity later increased to about 400 tons daily), and the output of gold in 1941 was higher than in any of the 4 preceding years. Other producers (small) in South Carolina comprised the Funder Bunk mine and the Mineral Mining Corporation properties in Lancaster County; the Dorothy, Ross-Carroll, and Terry in York County; and the Oro at Pageland, Chesterfield County. The State output of gold was 15,508 ounces compared with 13,076 ounces in 1940.

Gold production in North Carolina increased from 1,943 ounces in 1940 to 3,244 ounces in 1941. The Condor (old Howie) mine near Waxhaw in Union County, operated under lease by Hugh Jardine, was the principal producer of gold in the State in both years; milling of the ore at the Capps mill, Charlotte, was discontinued in January 1941, and a counter-current cyanide mill was erected on the Condor property and operated continuously from July 15 to the end of the year. Some gold was recovered from copper ore from the Fontana mine in Swain County and from gold ore from the Chapman in Burke County, the Hoover Hill in Randolph County, and a prospect near Ranger, Cherokee County. Small placers in Halifax and McDowell Counties yielded 6 ounces of gold.

Pennsylvania produced 2,422 ounces of gold in 1941, all of which was recovered as a byproduct from copper concentrates derived from magnetite-pyrite-chalcopyrite ore from the Cornwall mine in Lebanon County.

The other Eastern States producing gold in 1941 were: Georgia (311 ounces), chiefly from the Barlow placer, and the Lockhart and McDonald lode mines in Lumpkin County, and the Russell mine in Paulding County; Virginia (240 ounces), from the Redbank mine near Virgilina, Halifax County, and the Ruth placer in Goochland County; Tennessee (227 ounces), all recovered in the refining of copper bullion from the smelter at Copperhill; and Alabama (30 ounces), from tailings from the Hog Mountain mill dump near Alexander City, Tallapoosa County, and crude ore from the Gold Log mine in Talladega County.

Dry and siliceous ore and old tailings milled aggregated 152,471 tons, of which 149,123 tons treated by cyanidation yielded 18,323 fine ounces of gold, and 3,348 tons treated by amalgamation yielded 418 ounces. Gold ore shipped crude to smelters totaled 362 tons containing 292 ounces of gold.

The mine output of silver in the Eastern States in 1941 was 106,051 ounces compared with 102,825 ounces in 1940. Of the 1941 output, copper ore from Tennessee yielded 39,161 ounces, copper ore from North Carolina 5,044 ounces, copper concentrates from Pennsylvania magnetite-pyrite-chalcopyrite ore 15,016 ounces, lead concentrates from zinc-lead ore from New York 37,734 ounces, dry and siliceous gold ores (mainly from South Carolina and North Carolina) 9,081 ounces, and placer gravels 15 ounces of silver.

IDAHO

The output of recoverable gold, silver, copper, lead, and zinc from mines in Idaho in 1941 was valued at $41,776,848 compared with $37,744,393 in 1940, an increase of $4,032,455 (nearly 11 percent), according to G. E. Woodward and Paul Luff, of the United States Department of the Interior, Bureau of Mines. The quantity and value of each metal, except silver, were greater in 1941 than in 1940; the greatest gain was $2,966,874 in zinc. The output of gold increased 2 percent, copper 8 percent, lead less than one-half of one percent, and zinc 12 percent; the silver output declined 5 percent. The output of copper and zinc in the Coeur d'Alene region, the most important metal-producing area in Idaho, was greater in 1941 than in 1940, but the output of gold, silver, and lead was less. The total value of the metal output of the region increased from $29,444,265 to $32,398,932.

Production of recoverable gold increased from 146,480 ounces valued at $5,126,800 to 149,816 ounces valued at $5,243,560 in 1941, or 2 percent; the gold output in 1941 was the largest since 1871. Gold from lode mines decreased 10 percent to 77,421 ounces; that from placers increased 20 percent to 72,395 ounces. Most of the gold from placer mines came from 12 connected-bucket dredges operating in Boise, Clearwater, Custer, Elmore, Idaho, Latah, and Lemhi Counties; these dredges treated 10,612,000 cubic yards of gravel in 1941 and recovered 52,358 ounces of gold, an increase of 11,096 ounces over 1940. Twenty-one dragline or power-shovel excavators with either dry-land or floating washing plants (operating chiefly in Idaho, Lemhi, Clearwater, and Boise Counties) treated 2,342,000 cubic yards of gravel in 1941 and recovered 14,910 ounces of gold, an increase of 2,718 ounces over 1940. Of the total placer gold produced in Idaho in 1941, 84 percent came from the Boise Basin, Elk City, Yankee Fork, Warren, Hoodoo, Middle Boise, and Gibbonsville districts, where dredges were operated. The chief producers were Fisher-Baumhoff Co., H. & H. Mines, Snake River Mining Co., Northwest Goldfields, Inc., Idaho-Canadian Dredging Co., Warren Dredging Co., Boise King Placers, American River Mining Co., Mt. Vernon Gold Mining Co., Tyee Mining Co., Smith Brothers, and Gold Hill Placers.

About 89 percent of the total gold from lode mines came from dry and siliceous ore (chiefly gold ore), and nearly all the remainder came from zinc-lead ore. Dry and siliceous ores treated at amalgamation and cyanidation mills increased from 142,457 tons in 1940 to 179,503 in 1941; the 1941 tonnage yielded 39,598 ounces of gold (in bullion and concentrates) which came chiefly from Elmore, Idaho, Custer, Boise, and Valley Counties. Ore treated at straight concentration plants yielded 33,331 ounces of gold in the concentrates, and crude ore shipped direct to smelters yielded 4,492 ounces. About 81 percent of the lode gold came from the Middle Boise, Yellow Pine, Warm Springs, Burgdorf-Marshall Lake, Carson, Yankee Fork, Mineral Hill, and West View districts and the Coeur d'Alene region. The chief producers were the Boise-Rochester-Monarch, Yellow Pine, Golden Anchor, Triumph, De Lamar Milling Corporation, Custer Consolidated, Grunter, and Huron properties.

The total production of gold in Idaho in terms of recovered metal, from 1863 to 1941, inclusive, has been 7,629,158 ounces.

The output of recoverable silver in Idaho decreased from 17,552,240 ounces in 1940 to 16,672,410 in 1941 and the value from $12,481,593 to $11,855,936. Idaho retained its position as the largest silver-producing State. Dry and siliceous silver ore yielded 59 percent of the total silver produced in Idaho in 1941, zinc-lead ore 30 percent, lead ore 6 percent, and gold-silver ore and gold ore 3 percent. Production of silver from silver ore decreased 918,449 ounces in 1941 and that from zinc-lead ore 418,176 ounces, but the output from zinc ore increased 193,405 ounces, from lead ore 176,184 ounces, and from gold ore and gold-silver ore 60,176 ounces. The output of silver from the Sunshine mine was 7,138,426 ounces in 1941, a decline of 1,045,470 ounces from 1940; however, the mine retained its position as the largest producer of silver in the United States. The Coeur d'Alene region produced 88 percent of the State total silver in 1941; the remainder came chiefly from the Warm Springs, Carson, Bayhorse, South Mountain, Middle Boise, Port Hill, and Pend d'Oreille districts. Eight mines—the Sunshine, Bunker Hill & Sullivan, Mineral Point, Polaris, Hecla, Morning, Triumph, and Page—produced 84 percent of the State silver output in 1941. All these mines except the Triumph are in the Coeur d'Alene region, Shoshone County.

The total production of silver in Idaho, in terms of recovered metal, from 1863 to 1941, inclusive, has been 469,574,957 ounces.

MONTANA

The Montana output of gold, silver, copper, lead, and zinc had a larger aggregate value in 1941 than in 1940, but only the quantity of copper, silver, and zinc increased, according to G. E. Woodward and Paul Luff of the United States Department of the Interior, Bureau of Mines. In 1941 the total value of the five metals was $59,181,627 compared with $55,825,078 in 1940. The gold output from several of the large lode gold mines throughout the State showed sharp drops, but the output from placer mines was slightly less than that in 1940. The value of the metal output from Silver Bow County, by far the most productive area in the State, and from which virtually all of the copper and much of the zinc and silver is derived, was $44,195,725 in 1941 compared with $40,871,719 in 1940. This increase was due to the near capacity operations of the Anaconda Copper Mining Co.

The production of recoverable gold in Montana in 1941 was 246,475 fine ounces compared with 272,602 fine ounces in 1940—a decrease of 10 percent from 1940. In 1941 the output from lode mines showed a decrease of 23,591 fine ounces and that from placer mines 2,536 fine ounces. Siliceous ores yielded 64 percent of the State total and base metal ores 11 percent. There was a decrease from siliceous ores and zinc-lead ores but an increase from copper and lead ore. Gold ore mined in 1941 totaled 695,481 tons compared with 803,173 tons in 1940, which included 542,870 tons treated in amalgamation and cyanidation mills, 99,293 tons in concentration mills, and 53,318 tons shipped crude to smelters. Ore treated at amalgamation and cyanidation plants (with or without concentrating equipment) yielded 29 percent of the State's total gold and that at concentrating mills 22 percent, ores of all classes shipped crude to smelters 24 percent, and placers 25 percent.

A decline of 2,536 fine ounces of gold and 1,620 fine ounces of silver in 1941 was noted in the yield from placer mines. Seven connected-

bucket floating dredges were in operation in 1941; they treated 9,025,755 cubic yards of gravel and recovered gold valued at $1,184,540, indicating an average recoverable gold value of 13.1 cents per cubic yard treated. Dragline and power shovels with both dry-land and floating washing plants were reported in operation at forty properties. The plants washed 3,208,961 cubic yards of gravel and recovered gold valued at $886,305, indicating an average recoverable gold value of 27.6 cents to the cubic yard washed. Gains were noted in the output of recoverable gold from Park, Silver Bow, Broadwater, Ravalli, and Cascade Counties, but losses from Lewis and Clark, Madison, Jefferson, Powell, and Phillips Counties. The leading gold producer in Montana was again the West Mayflower property in Madison County, which was operated by the Anaconda Copper Mining Co. It was followed by all company-operated copper mines at Butte, the Ohio Keating mine in Broadwater County, the Winston Dredge operating on Prickly Pear Creek near Clancey, the Ruby Gulch mine at Zortman, and the Porter Bros. dredge near Helena.

The total production of gold in Montana, in terms of recovered metal, from 1862 to 1941, inclusive, has been 16,680,518 fine ounces.

The output of recoverable silver in Montana in 1941 was 12,386,925 ounces, virtually the same as in 1940. Copper ore yielded 50 percent of the State total silver, zinc-lead ore 24 percent, and siliceous ore 24 percent. Ore treated at concentration mills yielded 82 percent of the total silver, and crude smelting ore 17 percent. The output of silver ore was 122,684 tons and gold-silver ore 121,902 tons.

The copper mines, dumps, and zinc mines at Butte and the Flathead mine in Flathead County, all operated by the Anaconda Copper Mining Co., produced 73 percent of the State silver. Other large producers included the Lexington group in Montana district, Cascade County; the Granite Bimetallic mine (tailings) in Granite County; the Emma mine at Butte (including byproduct silver from manganese beneficiation), and the Florence mine in Cascade County.

The total production of silver in Montana, in terms of recovered metal, from 1862 to 1941, inclusive, has been 713,202,910 ounces.

NEVADA

In 1941 Nevada gold production (in terms of recovered metal) decreased 5 percent compared with 1940, but silver output in 1941 was the largest since 1926 in quantity and since 1925 in value, according to Charles White Merrill, of the United States Department of the Interior, Bureau of Mines. The output of gold from Nevada ores, re-treated tailings, and gravels in 1941 was 366,403 fine ounces valued at $12,824,105 compared with 383,933 ounces valued at $13,437,655 in 1940. Production of silver in 1941 was 5,830,238 fine ounces valued at $4,145,947 compared with 5,175,928 ounces valued at $3,680,660 in 1940, an increase of 13 percent in both quantity and value.

Gold was recovered from the following sources: Dry gold ore, 56 percent; copper ore, 18 percent; dry gold-silver ore, 14 percent; placer gravels, 10 percent; and other ores, 2 percent. Metallurgical data show that 56 percent of the State lode gold was recovered by cyanidation, 24 percent by the smelting of concentrates, 12 percent by the smelting of ore, and 8 percent by amalgamation. Cyanidation and smelting of ore as gold recovery methods were less important in

1941 than in 1940; the proportion of gold recovered by smelting of concentrates and by amalgamation increased.

The principal Nevada gold mines in 1941, listed by operating companies and in order of output, were Getchell Mine, Inc., Humboldt County (gold ore); Nevada Consolidated Copper Corporation, White Pine County (copper ore); Consolidated Coppermines Corporation, White Pine County (copper ore); Manhattan Gold Dredging Co., Nye County (connected-bucket dredge); Prescott Lease (E. L. Cord), Esmeralda County (gold ore); Standard Cyaniding Co., Pershing County (gold ore); Northumberland Mining Co., Nye County (gold ore); Consolidated Chollar Gould & Savage Mining Co., Storey County (gold ore); Dayton Dredging Co., Lyon County (dragline dredge); and Dayton Consolidated Mines Co. and lessees, Storey County (gold ore).

Nevada lode silver was recovered from the following sources in 1941: Dry gold-silver ore, 42 percent; dry silver ore, 21 percent; zinc-lead ore and lead ore, 12 percent each; dry gold ore, 9 percent; and copper ore, 4 percent. Placer gravel yielded a small quantity of silver. Cyanidation of ore, old tailings, sands, slimes, and concentrates accounted for 58 percent of the lode silver produced in Nevada in 1941; 33 percent was recovered by smelting of ore and old tailings, 28 percent by the smelting of concentrates, and the remainder by amalgamation of ore and old tailings.

The principal silver mines in Nevada in 1941, listed by operating companies and in order of output, were the Desert Silver, Inc., Esmeralda County (silver ore); Combined Metals Reduction Co., Lincoln County (zinc-lead ore); West Coast Mines, Inc., Humboldt County (gold-silver ore); lessees of The Tonopah Mining Co. of Nevada, Nye County (gold-silver ore); Bristol Silver Mines Co., Lincoln County (lead ore); Summit King Mines, Ltd., Churchill County (gold-silver ore); El Dorado-Rover Mining Co., Clark County (gold-silver ore); Sutro Tunnel Coalition, Inc., Storey County (gold-silver ore); and Consolidated Chollar Gould & Savage Mining Co., Storey County (gold ore).

NEW MEXICO

Lode and placer mines in New Mexico yielded 27,845 fine ounces of gold valued at $974,575 in 1941, according to Chas. W. Henderson and A. J. Martin of the United States Department of the Interior, Bureau of Mines. The chief producing counties were Grant yielding 14,793 fine ounces and Catron yielding 7,884 fine ounces. Eight flotation mills treated 98 percent of the total New Mexico output of ore (7,530,226 tons). Dry and siliceous ores yielded 57 percent of the State total gold in 1941, copper ore 32 percent, lead and zinc-lead ores 2 percent, and placers 9 percent. Of the 145 lode mines, the largest producers of gold in the order of output were: Black Hawk Consolidated Mines, Mogollon district, Catron County; Nevada Consolidated Copper Co., Central district, Grant County; Southwestern Mineral Co., and Exploration Syndicate, both in the Steeple Rock district, Grant County. One hundred and three placers were operated in 1941, the largest of which was the dry-land dredge of the John L. Hallett Construction Co., in the Las Animas district, Sierra County.

The mine production of recoverable silver in New Mexico in 1941 was 1,528,317 fine ounces, all but 284 ounces from lode mines. Grant County produced 55 percent of the State total and Catron County 37

percent. The largest producers in the order of output were the Black Hawk Consolidated Mines, American Smelting & Refining Co. (Hanover unit), Exploration Syndicate, and Nevada Consolidated Copper Co.

The total production of gold and silver in New Mexico, in terms of recovered metals, compiled from all sources by Chas. W. Henderson, from 1848 through 1941, has been 2,148,780 fine ounces of gold valued at $48,541,493 and 65,276,576 fine ounces of silver valued at $51,150,206.

OREGON

After establishing an all-time record in gold production in 1940, Oregon output in 1941 declined 15 percent in quantity and value, according to Charles White Merrill, of the United States Department of the Interior, Bureau of Mines. The production of gold from Oregon ores, gravels, and re-treated tailings in 1941 was 96,565 fine ounces valued at $3,379,775 compared with 113,402 ounces valued at $3,969,070 in 1940. Placer mines produced 63 percent of the gold and lode mines 37 percent. Dragline dredges handled 6,256,000 cubic yards of gravel in 1941 compared with 7,361,000 yards in 1940 and recovered 28,395 ounces of gold valued at $993,825 in 1941 compared with 35,216 ounces of gold valued at $1,232,560 in 1940. Dredges of the connected-bucket type treated 6,670,000 yards of gravel in 1941 compared with 7,580,000 yards in 1940 and recovered 24,131 ounces of gold valued at $844,585 compared with 24,951 ounces of gold valued at $873,285 in 1940. Dragline dredges handled 43 percent of the gravel and recovered 47 percent of the placer gold in Oregon in 1941; connected-bucket dredges handled 46 percent of the gravel and recovered 40 percent of the placer gold. Dry and siliceous gold ore was the source of 93 percent of the State lode gold; virtually the only other source was dry and siliceous gold-silver ore. Metallurgical data show that 71 percent of Oregon lode gold was recovered by smelting of concentrates, 15 percent by smelting of ore, 11 percent by cyanidation of ore, old tailings, and concentrates, and 3 percent by amalgamation of ore.

The principal Oregon gold mines in 1941, listed by operating companies and in order of output, were Cornucopia Gold Mines, Baker County (gold ore); Sumpter Valley Dredging Co., Baker County (connected-bucket dredge); Porter & Co., Grant County (connected-bucket dredge); Cougar-Independence Lessees, Grant County (gold ore); and Northwest Development Co., Baker County (dragline dredge). These five companies contributed 46 percent of the gold output in Oregon in 1941; two of them suspended operations during the year.

Oregon ores, gravels, and retreated tailings in 1941 yielded 276,158 fine ounces of silver valued at $196,379 compared with 219,112 ounces valued at $155,813 in 1940; the increase was 26 percent in both quantity and value. Of the State total silver, Grant County contributed 35 percent, Jefferson County 32 percent, and Baker County 30 percent.

SOUTH DAKOTA

Gold mining is one of the major mining industries of the Black Hills region of South Dakota, a small region comprising only parts of Custer, Lawrence, and Pennington Counties. In 1941, this region

yielded 600,637 fine ounces of gold valued at $21,022,295 and 170,771 fine ounces of byproduct silver valued at $121,437, according to Chas. W. Henderson and S. A. Gustavson of the Department of the Interior, Bureau of Mines, a 2 percent increase in gold over 1940 and exceeded only by the peak year of 1939.

The largest producing gold mine in the United States is the Homestake, located at Lead in Lawrence County. This mine has been producing almost continuously since 1876. Of the 1,711,744 tons of ore produced in South Dakota in 1941, the Homestake produced 1,499,988 tons, yielding 556,983 ounces of gold and 118,148 ounces of silver. The ore was treated by amalgamation followed by cyanidation of sands and slimes. No concentrates have been made at the Homestake mills for several years. This mine has been developed by shafts, the newest and deepest being the Yates shaft, which is 5,000 feet deep, completed in all details to 4,100 feet with a winze to the 5,000-foot level. Other important producers were the Bald Mountain group at Trojan, producing 134,990 tons of ore, yielding 27,420 fine ounces of gold and 50,458 fine ounces of silver; the Canyon Corporation at Deadwood, producing 36,677 tons of ore, yielding 11,256 fine ounces of gold and 1,056 fine ounces of silver; and the Holy Terror at Keystone, producing 31,894 tons of ore, yielding 4,234 ounces of gold and 839 ounces of silver. Small placer sluicing operations produced 93 ounces of gold and 7 ounces of silver. The total production of gold and silver (in terms of recovered metals) in South Dakota from the beginning of production in 1876 to the end of 1941, as compiled by Chas. W. Henderson, has been 20,037,943 fine ounces of gold, valued at $482,925,214, and 9,346,276 fine ounces of silver, valued at $6,648,628.

TEXAS

Texas mines yielded 306 fine ounces of gold, valued at $10,710, and 1,096,027 fine ounces of silver, valued at $779,397 in 1941, according to mine-production figures compiled by Chas. W. Henderson and S. A. Gustavson of the Department of the Interior, Bureau of Mines. Compared with 1940, the output of gold decreased 2 percent and that of silver decreased 17 percent in both quantity and value. The Presidio mine of the American Metal Co., at Shafter, Presidio County, produced 99.25 percent of the gold and 99.79 percent of the silver, the greater part of which was recovered by cyanidation. The remainder of the gold and most of the silver were recovered from lead ore (22 ounces of silver came from copper ore), shipped to the El Paso Smelter from mines and prospects in Culberson, Hardeman, Hudspeth, and Presidio Counties among which were the Hazel and Needle Peak in Culberson, the properties of the Puerto Rico Mining Co. in Hudspeth County, and the Burney prospects in Presidio County.

The Presidio mine is equipped with a 400-ton gravity concentration-cyanidation mill which was run at an average rate of 387 tons daily in 1941. Silver was found at the Presidio mine in 1880, but it was not until 1885 that shipments were begun. From 1885 through 1941, the total production, compiled from all sources by Chas. W. Henderson of gold and silver in Texas (in terms of recovered metals) has been 8,041 ounces of gold valued at $215,380, and 32,513,756 ounces of silver valued at $22,874,293, most of the silver (29,628,902 ounces) coming from the Presidio mine.

UTAH

Utah mines produced gold, silver, copper, lead, and zinc in 1941 valued at $97,796,623 in terms of recovered metals, a 13 percent gain over 1940 production, according to G. E. Woodward and Paul Luff of the United States Department of the Interior, Bureau of Mines. The gain in value was due almost entirely to the increased output of recovered copper. The quantity of gold was virtually the same as in 1940; that of silver, lead, and zinc decreased, although the total value of both lead and zinc increased. The slight gain in gold and by far the largest part of the gain in copper output can be credited to the Bingham district and resulted from the outstanding efforts of the Utah Copper Co. The Park City region showed gains in the production of gold and copper only, and the Tintic district made gains in the output of lead and zinc. Tooele County reported a loss in output of each metal except zinc.

The output of recoverable gold in Utah in 1941 was 356,501 ounces, a gain of 1,007 ounces over that of 1940. Copper ore yielded 68 percent of the total gold, and siliceous ore 16 percent; the remainder came from lead ore, lead-copper ore, zinc ore, zinc-lead ore, zinc-lead-copper ore, and slag and from placers. The placer output amounted to 629 ounces.

Gold recovered from ore of all classes treated in concentrating mills comprised 80 percent of the State total, from crude ore shipped direct to smelters nearly 15 percent, and from ore treated by amalgamation and cyanidation and from placers 5 percent. The Bingham (West Mountain) district produced 77 percent of the State gold and showed a gain of 18,561 ounces. The Park City region produced 2,447 ounces more gold than in 1940 owing to the output of the New Park Mining Co. Gold produced from the Tintic district decreased sharply, owing chiefly to the decline at the Tintic Bullion and Centennial-Beck and Victoria mines, and gold output from Tooele County decreased 3,481 ounces. The Utah Copper Co., which supplied over 67 percent of the State gold, was followed by the group of properties at Mercur under control of Snyder Mines, Inc., the United States and Lark, Mayflower, Tintic Bullion mines; these five mines produced 88 percent of the total gold output of the State.

The total production of gold in Utah, in terms of recovered metal, from 1864 to 1941, inclusive, has been 9,058,229 ounces.

Silver recovered from Utah totaled 11,395,485 ounces in 1941, a decrease of 776,814 ounces from 1940, owing primarily to the lower output of siliceous ore. In 1941 zinc-lead, lead-copper, and zinc-lead-copper ore yielded 51 percent of the State total silver, silver ore 20 percent, copper ore 20 percent, and lead ore nearly 9 percent. Bingham was again the largest silver producing district (approximately 43 percent of the State total) followed by the Park City region, the Tintic district, and Tooele County. Ore concentrated yielded 70 percent of the State total silver, and ore shipped crude to smelters nearly all the remainder.

The Utah Copper Co. was again the largest producer followed by the United States and Lark, Tintic Standard, Silver King Coalition, the Park City Consolidated properties, the New Park Mining Co. property, the Park Utah Consolidated Mines groups, and the Chief Consolidated properties. These eight properties produced 82 percent of the silver output in Utah in 1941.

The total production of silver in Utah, in terms of recovered metal, from 1864 to 1941, inclusive, has been 681,300,151 ounces.

WASHINGTON

Ore and gravels from mines in Washington produced recoverable gold, silver, copper, lead, and zinc valued at $7,874,886 in 1941 compared with $7,018,812 in 1940, according to G. E. Woodward and Paul Luff, of the United States Department of the Interior, Bureau of Mines. This gain in value of total output was due chiefly to an increased production of lead and zinc. The gain in production of gold and silver was due to a sharp increase in the output of the Republic district, Ferry County, which more than balanced the losses in output from the Methow district in Okanogan County and from the Howe Sound Co. in Chelan Lake district, Chelan County.

The output of recoverable gold was 84,176 fine ounces in 1941, a gain of 2 percent over 1940. This gain was due almost entirely to the gold recovered from gold concentrates shipped to a smelter. Gold recovered from amalgamation showed a slight increase, and that recovered from gold cyanide, bullion, copper concentrates, and crude ore shipped to smelters showed a decline from 1940. Gold bullion recovered from ore treated at cyanide plants (with or without concentration) in Ferry County declined 6,131 ounces, but in Stevens County there was a gain of 559 ounces. Gold recovered from gold concentrates made in the concentration sections of the cyanide mills in Ferry County increased 18,299 ounces. Gold in ore sent crude to smelters was virtually the same as in 1940 in Ferry County but declined 1,856 ounces in Okanogan County and 198 ounces in Chelan County. Gold ores treated in amalgamation plants principally from Ferry, Okanogan, and Whatcom Counties yielded 777 ounces of gold. Copper concentrates produced by the Howe Sound Co. yielded about 55 percent of the State total, and gold concentrates produced from the Knob Hill and Mountain Lion groups 23 percent. Other producers of gold were the Aurum and Valley mines in Ferry County and the First Thought mine in Stevens County. The total output of gold ore in 1941 was 178,121 tons compared with 202,502 tons in 1940. It was treated as follows: 135,290 tons cyanided, 694 tons amalgamated, 3,747 tons concentrated, and 38,390 tons sent crude to smelters. Placers produced 540 fine ounces of gold in 1941.

The total production of gold, in terms of recovered metal, from 1860 to 1941, inclusive, has been 1,881.725 ounces.

The production of recoverable silver in Washington in 1941 was 401,940 fine ounces, a gain of 10 percent over 1940. The bulk of the silver came from copper ores of Chelan County and gold ores of Ferry County and most of the remainder from copper ores of Stevens and Snohomish Counties. Of the total State silver production copper ores yielded 50 percent, gold ore 43 percent, silver ore 3 percent, and the combined production from zinc-lead, gold-silver, and lead ores and placer gravels 4 percent. The Holden mine in Chelan County was the largest producer of silver, followed by the Knob Hill and Mountain Lion properties in Ferry County operated by the Knob Hill Mines, Inc. These two companies produced 75 percent of the State silver. Other producing mines were the Aurum and Valley in Ferry County and the Amazon and Copper King in Stevens County. The yield of silver from placer mines was 90 ounces.

The total production of silver in Washington, in terms of recovered metal, from 1860 to 1941, inclusive, has been 11,222,890 ounces.

WYOMING

Wyoming mines yielded only 478 fine ounces of gold and 94 fine ounces of silver in 1941, the lowest gold production in any year since 1932, according to Charles W. Henderson and S. A. Gustavson of the United States Department of the Interior, Bureau of Mines. Fremont County produced 442 ounces of placer gold and 49 ounces of placer silver, the largest production being from the dry-land dredges on the Timbah-Bah and Whisenand placers. These two operations produced 95 percent of the State placer gold and 90 percent of the State placer silver. During the year 8 lode mines yielded 159 tons of ore which contained 31 ounces of gold and 44 ounces of silver. The total production, compiled from all sources by Charles W. Henderson, of gold and silver in Wyoming from 1867 through 1941 has been 77,891 fine ounces of gold and 74,580 fine ounces of silver.

Distribution of the gold and silver production of the United States,[1] in fine ounces, for 1941, as to sources of production

[Table furnished by the Bureau of Mines]

State	Gold			Silver		
	Lode mines	Placer mines: Floating connected-bucket dredges	Placer mines: All other	Dry and siliceous ores[2]	Lead ores[3]	Copper ores

[1] Philippine Islands and Puerto Rico excluded. United States refineries' receipts for the Philippine Islands give the following production for 1941: 1,130,933 ounces of gold and 1,224,336 ounces of silver.
[2] Contains 194,128 ounces of silver from placer mines.
[3] Includes lead, lead-copper, zinc, zinc-lead, and zinc-copper.

Refinery production (arrivals thereat) of gold mined in the several States and Territories in 1940 and 1941 with the increase and decrease in each for the latter year

[1] Value of gold in 1934 and thereafter calculated on basis of $35 per fine ounce; prior thereto on basis of $20.67+ per fine ounce.

[2] Value of silver calculated on the basis of the average amount per ounce returned to depositors of newly mined domestic silver; in 1934 at $0.64+ per fine ounce, in 1935 at $0.71875, in 1936 at $0.7745, in 1937 at $0.7735.

[3] Value of silver calculated on the basis of the amount per fine ounce returned to depositors of newly mined domestic silver produced in 1938, $0.6464+, in 1939 $0.6757+, in 1940 and 1941 $0.7111+.

Gold and Silver Used in Industrial Arts in the United States During the Calendar Year 1941

Issue by the mints and assay offices of gold and silver for industrial-arts use has very substantially lessened since the monetary price of gold was fixed at $35 per fine troy ounce and a one-fourth of 1 percent charge imposed, and the supplying of industry by commercial refiners of those metals has substantially increased. Previously the principal source of gold supply to industry was the mint service institutions.

The following table gives the value of the gold and the quantity of the silver bars issued by the Government institutions and private refineries during the calendar year 1941, with the classes of material from which they were made.

Gold and Silver Issued For Use In The Industrial Arts During the Calendar Year 1941 [1]

Item	Issued by—	Gold	Silver
		Value	*Fine ounces*
Bullion	Mints and assay offices	$1,104,500	423,401
Bullion in various forms	Private refiners and dealers	66,872,610	92,292,829
United States Coin [2]	Banks, etc.		77,344
Total		67,977,110	92,793,574
Old jewelry, plate, scrap, etc., contained in private refineries and dealers returns and that returned to monetary use		30,975,490	20,361,256
Net new material used in industry		37,001,620	72,432,318

[1] For explanation of calculation see p. 48.
[2] Estimated; the quantity of silver is equal to 100,000 silver dollars.

Gold and silver furnished for use in manufactures and the arts, and classification of the materials used, since 1880

[6] Proclamation of the President in conformity with act of Mar. 3, 1795.
[7] Discontinued by act of Feb. 21, 1857.
[8] Composed of 88 percent copper and 12 percent nickel.
[9] Discontinued by act of Apr. 22, 1864.

United States Coins Carrying 1792 Date

It appears that an inconsiderable number of coins bearing the date 1792, of denominations dime, half-dime, and one cent, are in the hands of coin collectors. Such coins are not included in the Mint official coinage records, which have their initiation as of 1793. Evidently they were of a preliminary, if not experimental, nature. However, the coinage system was provided for by legislation of April 2, 1792, and May 8, 1792, and historical records, including the following excerpt from President George Washington's fourth report to the Congress of the United States, appear to authenticate the issue of coins in 1792. Excerpt from President Washington's report to Congress dated November 6, 1792:

> In execution of the authority given by the legislature, measures have been taken for engaging some artists from abroad to aid in the establishment of our Mint. Others have been employed at home. Provisions have been made for the requisite buildings, and these are now putting into proper condition for the purposes of the establishment. There has been a small beginning in the coinage of half dismes, the want of small coins in circulation calling the first attention to them.

Income and expenses of the United States Mint

Item	Philadelphia Mint	San Francisco Mint	Denver Mint
INCOME			
Revenue:			
Melting charges on bullion receipts	$7,932.72	$21,809.03	$5,606.24
Parting and refining charges on bullion		157,657.13	79,916.03
Handling charges on gold receipts	7,676.81	367,520.57	87,421.36
Handling charges on gold sales	974.28	244.84	39.27
Bar charges on issue bars	208.44	47.80	
Charges on proof coins sold	19,688.60		
Charges on accepted altered coins	195.20	4.00	
Transportation charges on bullion			
Proceeds of medals sold	3,380.24	26.00	
Receipts for special assays made on bullion and ores	291.00	25.00	270.00
Value of bullion recovered incident to receipt of deposits	2,564.12	6,718.15	7,987.80
Value of bullion recovered from refining and coining operations (net)		182,837.08	18,167.83
Gain on lightweight and multilated coin purchased for recoinage	19.01	25.03	7.29
Gain on bullion shipments (net)			
Proceeds of sale of old material	1,907.05	193.55	272.94
Fines and penalties (bullion and coin forfeitures)		15,635.25	
Commission on telephone calls	107.24		94.22
Seignorage on subsidiary silver coinage	25,309,643.07	8,350,911.41	8,693,488.01
Seignorage on minor coinage (nickel)	7,237,115.99	1,223,573.34	1,714,163.21
Seignorage on minor coinage (bronze)	9,478,024.45	1,472,945.08	2,103,338.16
Salary refund for jury service			
Total revenue	42,069,788.22	11,800,173.26	12,710,772.36
Appropriation earnings:			
Charges for manufacture of foreign coin	517,792.00	500,797.82	
Charges for manufacture of special medals	9,204.94		
Charges for work and supplies for other institutions	79,739.88		
Total earnings	606,736.82	500,797.82	
Total income	42,676,525.04	12,300,971.08	12,710,772.36
EXPENSES			
Payable from appropriations:			
Transportation of bullion and coin (between mints and assay offices)	380.27	240,807.57	66.64
Personnel	2,112,124.17	938,985.59	793,115.38
Operative waste of monetary metals	31,898.44		
Loss on operative sweeps sold	1,574.25	2,257.29	1,000.66
Other expenses, including supplies, materials, equipment, and miscellaneous items	390,718.98	132,391.39	180,334.00
Interinstitution items not involving appropriation transfers	62,913.15	27,313.65	28,727.00
Total payable from appropriations	2,473,782.96	1,341,755.49	1,003,243.68
Payable from revenue:			
Expenses of distributing minor coin	286,615.19	56,643.03	75,238.60

Stock of domestic coin in the United States, June 30, 1942 [1]

On June 30, 1942, the stock of domestic coin in the United States was $1,301,639,122 as shown in the table below:

Item	Silver	Minor	Total
Estimated stock of coin in United States on June 30, 1941	$994,325,676	$199,364,371	$1,193,690,047
Coinage executed during fiscal year 1942	85,307,259	25,698,921	111,006,180
Imports, United States coin, fiscal year 1942	209,410		209,410
Total	1,079,842,345	225,063,292	1,304,905,637
Less:			
Exports United States coin, fiscal year 1942	83,000		83,000
United States coin withdrawn from monetary use, face amount, fiscal year 1942	2,767,815	315,700	3,083,515
United States coin used in the industrial arts, and general disappearance, estimated fiscal year 1942	100,000		100,000
Total	2,950,815	315,700	3,266,515
Estimated stock of coin in United States, June 30, 1942	1,076,891,530	224,747,592	1,301,639,122

[1] For method of estimating, see p. 48.

NOTE.—The number of standard silver dollars coined to June 30, 1942, was 847,629,915, which, added to the Hawaiian dollar coinage, 500,000 plus the number imported from the Philippine Islands, 150,000, and the number returned in Government transports, 496,859, equals 848,776,774. Since July 1, 1898, the number of standard silver dollars exported in transports has been 2,495,000, the net export from November 1919 to July 1920, in movement due to the high price of silver, was 28,287,142; those melted under the terms of the Pittman Act of Apr. 23, 1918, totaled 270,232,722; those melted otherwise (mutilated, etc.) since 1883 numbered 229,327, and the number of Hawaiian dollars melted to June 30, 1942, was 455,329, a total disposition of 301,699,520, leaving in the United States on June 30, 1942, 547,077,254 standard silver dollars and 529,814,276 dollars in subsidiary silver coin.

Estimated monetary stock of gold and silver in the United States and the amount per capita at the close of each fiscal year since 1873

Fiscal year ended June 30—	Population (thousands)	Gold bullion and coin (thousands)	Silver coin [1] (thousands)	Per capita		
				Gold	Silver	Total

[1] For 1934 and thereafter includes silver bullion revalued to $1.29+ per fine troy ounce and set up as security against silver certificates.

[2] On Jan. 31, 1934, the weight of the gold dollar was reduced from 25.8 grains of gold nine-tenths fine to 15 5/21 grains nine-tenths fine, thereby giving gold a monetary value of $35 per fine troy ounce, which compares with the previous $20.67+ per fine troy ounce. Proclamation of Jan. 31, 1934.

On December 31, 1941, the stock of domestic coin in the United States was $1,259,174,354 as shown in the table below:

Stock of domestic coin in the United States, Dec. 31, 1941 [1]

Item	Silver	Minor	Total
Estimated stock of coin in United States, Dec. 31, 1940	$971,863,164	$189,378,186	$1,161,241,350
Coinage executed, calendar year 1941	76,120,483	26,089,027	102,209,510
Imports, United States coin, calendar year 1941	188,996		188,996
Total	1,048,172,643	215,467,213	1,263,639,856
Less:			
Exports, United States coin, calendar year 1941	176,000		176,000
United States coin withdrawn from monetary use, calendar year 1941, face amount	3,854,199	335,303	4,189,502
United States coin used in the industrial arts, and general disappearance, estimated, calendar year 1941	100,000		100,000
Total	4,130,199	335,303	4,465,502
Estimated stock of coin in United States Dec. 31, 1941	1,044,042,444	215,131,910	1,259,174,354

[1] For method of estimating, see p. 48.

NOTE.—The number of standard silver dollars coined from 1878 to Dec. 31, 1941, was 847,629,915 which, added to Hawaiian dollar coinage, 500,000 plus the number imported from the Philippine Islands, 150,000, and the number returned in Government transports, 496,859, equals 848,776,774. Since July 1, 1898, the number of standard silver dollars exported in transports has been 2,495,000: the net export from November 1919 to July 1920 in movement due to the high price of silver was 28,287,142: those melted under the terms of the Pittman Act of Apr. 23, 1918, total 270,232,722: those melted otherwise (mutilated, etc.) since 1883 numbered 228,889, and the number of Hawaiian dollars melted to Dec. 31, 1941, was 455,329; a total disposition of 301,699,082, leaving in the United States on Dec. 31, 1941, 547,077,692 standard silver dollars and 496,964,752 dollars in subsidiary silver coin.

[1] Previous to 1914 (year Federal Reserve System established) figures are unrevised.
[2] Prior to 1934 gold monetary value was calculated on basis of $20.67+ per fine troy ounce; 1934 and thereafter calculated on basis of $35 per fine troy ounce.
[3] Includes coin in State and private banks as well as coin in tills and the hands of the public.
[4] Coin awaiting melting included with bullion item.

Exports of refined silver bullion from the United States since 1900

[1] Data for individual years published in reports of the Director of the Mint for 1931 and for prior years.
[2] For first 10 months only: Apr. 1, 1939, to Jan. 31, 1940.
[3] Data not available.

NOTE.—Net exports are shown with a prefixed minus sign. The quantities in the column "Net imports" for both gold and silver for the years 1873–74 to 1886–87 are estimated only, deducted from the declared values of the trade for those years by the following process:

For gold, the rupee value of the monthly net imports was converted into sterling at the average rate of exchange in each month, and this sterling value was then divided by the English mint price of gold, (£3 17s. 10½d.). For silver the average price of 107 rupees per 100 teals, or 285.33 rupees per 100 ounces was taken as the basis o fthe value of the annual imports.

1729	14.92	1772	14.52	1815	15.26	1858	15.38	1901	34.68		

NOTE.—From 1687 to 1832 the ratios are taken from Dr. A. Soetbeer, from 1833 to 1878 from Pixley and Abell's tables, from 1879 to 1896 from daily cabled prices from London to the Bureau of the Mint, from 1897 to 1914 from daily London quotations, and since from daily New York quotations.

FOREIGN AND WORLD MONETARY STATISTICS

The statistics of foreign countries on production and coinage of gold and silver and stocks of money, published annually in the reports of the Bureau of the Mint, are obtained, so far as practicable, directly from the governments of such countries by the representatives of the United States accredited to them.

Interrogatories covering the points on which information is sought are sent yearly to the United States Ambassadors and Ministers through the Department of State, and the replies in the form of reports are forwarded directly to the Bureau of the Mint.

Receipts of replies to the interrogatories are frequently delayed in transmission, and the available data for the calendar year under review are usually incomplete. In a general way interrogatory answers are herein published as received, with the addition of equivalents. If inaccuracies are apparent, information that would warrant the making of possible corrections is often unavailable.

In the absence of dependable official returns from foreign countries, the most reliable data available are used in compiling world statistics.

COINAGE OF NATIONS [1]

CALENDAR YEAR 1940

Country	Monetary unit	Silver		
		Value in monetary units named	Value of fine ounces consumed [2]	Fine ounces consumed
United States	Dollar	$29,359,834	$7,451,584	21,238,660

REVISIONS, 1940 MONETARY STOCKS

Additional data relative to monetary stocks for the calendar year 1940, received from governments of countries appearing below, are for supplementation and revision of the table entitled "*Monetary stock of principal countries of the world, end of calendar year 1940,*" published in last year's volume.

Monetary stock of specified countries of the world, end of calendar year, 1940.[1]

[Stated in United States money (000 omitted) except paper circulation, which is stated in monetary unit of issuing country (000 omitted). $1=15\frac{5}{21}$ grains of gold $\frac{9}{10}$ fine: i. e., an ounce of fine gold=$35]

Country	Monetary unit			Gold stock (conversions to United States equivalent at legal parity)	Silver stock (United States equivalent of reported face amount at exchange rate)	Paper circulation in monetary unit of issuing country
	Name	United States equivalent				
		On gold basis as defined by laws effective Dec. 31, 1940, so far as known	At average exchange rate during December 1940			
North America:						
Mexico	Peso	[2]	$0.2045		$68,998	
West Indies (British): Barbados	Dollar	$1.7166	.8406			672
South America: Paraguay	Peso	1.6335	.0036			1,218,640
Europe:						
Eire	Pound	8.2397	4.0350	$28,707	8,458	
Malta and Gozo	do	8.2397	4.0350		444	2,400

Papua	do	8.2397	3.2150		10	11

[1] For other world monetary statistics for 1940, see the *Annual Report of the Director of the Mint, Fiscal Year ended June 30, 1941*, pp. 92–104.
[2] Decree of Aug. 28, 1936, left the monetary unit to be later defined by law.
[3] For year ended June 30, 1940.
[4] Includes note circulation for Northern Rhodesia and Nyassaland.
[5] Australian notes are the circulating media.

WORLD'S MONETARY STOCKS OF GOLD, SILVER, AND PAPER MONEY AT THE CLOSE OF THE YEAR 1941

In the past the statistics shown in this table have been compiled largely from data received from official sources. Due to present conditions it has been impossible to obtain official data from many countries and in such cases the most reliable data available have been used. Several countries have been omitted this year because of the complete lack of reliable data. It is understood that material amounts of gold are not reported by several countries, such as amounts held in secret funds for stabilizing currencies and those hoarded or held outside of regularly reported stocks. Statements showing the amount of silver in circulation, in many countries, are not available. Population figures are principally those supplied by the Bureau of Foreign and Domestic Commerce, United States Department of Commerce, and are the latest available.

Monetary stock of principal countries of the world, end of calendar year 1941 (subject to revision)

Stated in United States money (000 omitted), except paper circulation, which is stated in monetary unit of issuing country (000 omitted) $1 = 15\frac{5}{21}$ grains of gold $\frac{9}{10}$ fine; i. e., an ounce of fine gold = $35. Population (000 omitted).

Country	Monetary unit			Gold stock (conversions to United States equivalent at legal parity except as indicated by footnotes)			Monetary silver stock in government treasuries, in banks, and, when data available, in circulation (United States equivalent of reported face amount at exchange rate)	Paper circulation in monetary unit of issuing country	Population	Per capita		
	Name	United States equivalent		In central bank, government treasuries, and earmarked abroad	Other	Total gold stock				Gold	Silver	Paper
		On gold basis as defined by laws effective Dec. 31, 1941, so far as known	At average exchange rate during December 1941 (official rate unless otherwise indicated)

Total[31]													

[1] Includes any paper currency held outside the continental limits of the United States.
[2] Gold held by the Minister of Finance.
[3] Reported Federal Reserve Bulletin, October 1942.
[4] Net issues of silver coin.
[5] Includes notes held by the chartered banks.
[6] So far as known monetary unit was not defined by law on a gold basis on Dec. 31, 1941.
[7] Conversion at $35 per fine ounce.
[8] Data not available.
[9] Average exchange rate for 1941.
[10] Average free exchange rate for 1941.
[11] Prior year's figure.
[12] United States coin and currency also circulate.
[13] United States currency is circulating media.
[14] Reported amount valued at 70 colons per fine ounce (United States equivalent 0.50).
[15] Under decree of June 21, 1941, holdings of Central Bank are valued at Bs 46 to $1 (United States equivalent $0.0217).
[16] Revaluation of June 4, 1940, at 0.0602 gram fine gold per sucre (United States equivalent $0.06774).
[17] Includes minor coin.
[18] Includes population of Dobrudja province annexed from Rumania in September 1940.
[19] As of October 1941, reported Federal Reserve Bulletin, April 1942.
[20] Reported in the Bankers Magazine, May 1942.
[21] Includes population of Transylvania annexed from Rumania in August 1940.
[22] As of September 1941; reported Federal Reserve Bulletin, April 1942.
[23] As of November 1941; reported Federal Reserve Bulletin, April 1942.
[24] Reported Federal Reserve Bulletin, July 1942.
[25] 1 Syro-Lebanese pound equal to 20 francs (Fighting French).
[26] Converted from South African pounds.
[27] Includes 676,008 Company of Mozambique pounds converted to escudos at 110 to the pound.
[28] Includes notes in circulation in Northern Rhodesia.
[29] Reported Federal Reserve Bulletin, April 1942.
[30] Conversion at rate of £111 Fiji to £100 Sterling
[31] Totals omitted due to the great number of instances in which data are not available.

Production of gold and silver in the world since the discovery of America

[From 1493 to 1885 is from a table of averages for certain periods, compiled by Dr. Adolph Soetbeer; for the years since, the production is the annual estimate of the Bureau of the Mint]

Period	Gold				Silver				Percentage of production			
	Annual average for period		Total for period		Annual average for period		Total for period		By weight		By value	
	Fine ounces	Value	Fine ounces	Value [1]	Fine ounces	Commercial value [2]	Fine ounces	Commercial value [2]	Gold	Silver	Gold	Silver
1493–1520	186,470	$3,855,000	5,221,160	$107,931,000	1,511,050	$2,085,249	42,309,400	$58,386,972	11.0	89.0	64.9	35.1

	7,882,565	162,947,000	62,234,698	1,286,505,400								
	12,446,939	257,301,100										

[1] Valued, prior to 1934, at $20.67+ per fine ounce; 1934 and thereafter, at $35 per fine ounce.

[2] Valued, prior to 1701, at $1.38 per fine ounce, which corresponds with a commercial ratio of silver to gold of approximately 15 to 1, the ratio which prevailed for over 100 years subsequent to 1687, as per tabulation elsewhere in this volume. From 1701 to 1840 the value corresponds with the average ratios of silver to gold as per the tabulation elsewhere in this volume. From 1841 the annual averages per fine ounce in London are used except for the years 1915 to 1921, and 1931 to 1941, when New York prices are used. Tabulations of silver quotations appear elsewhere in this volume.

Production of gold and silver in the world since the discovery of America—Continued

Period	Gold				Silver				Percentage of production			
	Annual average for period		Total for period		Annual average for period		Total for period		By weight		By value	
	Fine ounces	Value	Fine ounces	Value	Fine ounces	Commercial value	Fine ounces	Commercial value	Gold	Silver	Gold	Silver

Activities, general	7
Acts authorizing coinage	60–63
Alabama, production of gold and silver	34, 35
Alaska:	
Production of gold and silver	34, 35
Production review	19
Appalachian States, production of gold and silver, review	24, 25
Appropriations, expenses, and income	6, 7, 76, 77
Appropriations, reimbursements, expenditures, and balances, fiscal year 1942	78
Arizona:	
Production of gold and silver	34, 35
Production review	20, 21
Arts, industrial, gold and silver used:	
In United States, 1941	6, 37
In United States since 1880	37
In world	95
Assay commission, annual test of coins	13, 14, 15
Assay office, at New York:	
Deposits, income, expenses, and employees	7
Employees by departments	13
Assets and liabilities	79–80, 82–83

B

Balances, receipts, and disbursements of gold bullion	9
Bars, refined issue-bars manufactured	11
Bars of gold issued for industrial use	8
Bases, statistical	48
British India, imports and exports of gold and silver since 1873	86
Bullion and coin imported and exported, by calendar years since 1873	59
Bullion:	
Deposit transactions	4, 7, 49
Deposits and purchases	4, 5, 42–45, 50–53
Gains and losses	12
Gold and silver imported and exported to and from British India since 1873	86
Gold receipts, disbursements, and balances	9
In mints and assay offices	9, 79, 82
Number of deposit transactions	4, 7
Proof (1.000 fine)	10
Recovered (surplus) in ounces	10, 12
Silver exports from London to the East since 1881	85
Silver, refined, exports from United States since 1900	85
Stock of, in United States	6, 79, 82
Transfer of, for long-term storage	4
Value of a silver dollar since 1837	90
Bureau of the Mint:	
Employees	7, 13
Expenses	7, 76, 78

California:	
Production of gold and silver	34, 35
Production review	22–23
Central States of the United States, review of production of gold and silver	23
Coin:	
Demand for, during fiscal year 1942	3
Deposits since 1873	54
Domestic, specifications	60–62
Minor, issued, melted, and outstanding	9, 10
Test by annual assay commission	13, 14, 15
Withdrawn from monetary use	46, 55, 56, 91
Coin and bullion:	
Stock of, in mints and assay offices	79, 82, 83
Stock of, in United States	6, 79, 82, 83
Coinage by the United States for other countries	3, 8, 39
Coinage of nations, 1940 and 1941	92, 93
Coinage of the United States:	
Authority for coinage, changes in weight and fineness, amounts	60–63
By classes (gold, silver, minor, total) and calendar years since 1793	68–75
By each mint and by denominations:	
Since 1793	64
During past 10 years, in value and pieces	64
Calendar year 1941	39
Commemorative	60–62, 69
Fiscal year 1942	3, 7
Gold, by denominations and calendar years since 1793	68
Gold, by fine ounces, value, and fiscal years, since 1873	60
Minor, by denominations and calendar years since 1793	72, 73
Minor, issued, melted, and outstanding	9, 10
Review of	3
Seigniorage on silver and minor coins	6, 7, 76
Silver, by denominations and calendar years since 1793	70, 71
Silver, by fine ounces, value, and fiscal years since 1873	60
Uncurrent coin used in	46, 55, 56
Coining department operations	10, 11
Coins, domestic, bearing date 1792	63
Coins withdrawn from monetary use. (*See* Withdrawn coin.)	
Colorado:	
Production of gold and silver	34, 35
Production review	24
Commemorative coins:	
Authority for coinage, weight, fineness, amounts	60–63
Consumption of gold and silver in the world	95
Consumption of gold and silver in the United States	6, 37

D

Denver Mint:	
Coinage	7, 64–67
Deposits, income, expenses, and employees	7, 76
Employees, by departments	13
Receipts of gold and silver	9, 42–45, 50–53
Deposits, earnings, expenditures, and employees, by institutions	7
Deposits and purchases of gold	4, 5, 42, 50
Deposits and purchases of silver	4, 44, 52, 58
Deposits of foreign bullion and coin	41, 57, 58
Deposits of gold since 1873	54
Deposits of silver since 1873	54
Deposits of silver in trust by foreign countries	52, 58
Deposit transactions, number	4, 7, 49
Disbursements, receipts, and balances of gold bullion	9
Dollar, silver bullion, value of, since 1837	90

REPORT OF THE DIRECTOR OF THE MINT ON THE OPERATIONS OF THE MINT SERVICE FOR THE FISCAL YEAR 1945

ANNUAL REPORT OF THE DIRECTOR OF THE MINT

TREASURY DEPARTMENT,
BUREAU OF THE MINT,
Washington, D. C., September 1, 1945

SIR: In compliance with the provisions of section 253, title 31, United States Code, I have the honor to submit herewith a report covering the operations of the mints, assay offices, and bullion depositories of the United States for the fiscal year ended June 30, 1945, being the Seventy-third Annual Report of the Director of the Mint. There is also submitted for publication in connection therewith the annual report of this Bureau upon the production and consumption of the precious metals in the United States for the calendar year 1944.

OPERATION OF THE MINTS, ASSAY OFFICES, AND BULLION DEPOSITORIES

Functions and Institutions of the Mint Service

The principal functions of the Mint Service include the acquisition of gold and silver bullion, payments for which are made on the basis of Mint assays; the manufacture of domestic silver and minor coins; and the safeguarding of the Government's holdings of the monetary metals, including coins in processing stages until finished and distributed to the Treasury or to Federal Reserve Banks. Other major activities include the refining of gold and silver, coinage for foreign governments, manufacture of gold, silver, and bronze medals, coinage dies, platinum assay utensils, and other materials. In addition, the Mint Service performs special assays of bullion and ores submitted by the public for analysis.

During the fiscal year 1945 seven field institutions were in operation: coinage mints at Philadelphia, San Francisco and Denver; assay offices at New York and Seattle; gold bullion depository at Fort Knox; and silver bullion depository at West Point. The Bureau of the Mint in Washington administers all Mint Service activities.

*Coinage**

Domestic coin manufactured during the fiscal year ended June 30, 1945, amounted to the record production of 2,646,134,101 pieces, which represented an increased rate of production over the previous year's output for the sixth consecutive year. Coins produced during the year were as follows:

Denomination	Number of pieces	Face value
Half dollars	63,322,200	$31,661,100.00
Quarter dollars	126,216,801	31,554,200.25
Dimes	341,651,000	34,165,100.00
Five-cent pieces	155,627,100	7,781,355.00
One-cent pieces	1,959,317,000	19,593,170.00
Total domestic coinage	2,646,134,101	124,754,925.25

*See tables on pages 6 and 7 for production by each mint.

Foreign coinage also the highest in the Mint's history, totaled 1,388,971,000 pieces compared with 487,847,000 pieces produced for foreign nations the previous year. Production in 1945 was as follows:

Government	*Number of Pieces*
Australia	26,000,000
Dominican Republic	2,000,000
El Salvador	6,000,000
Ethiopia	96,000,000
Greenland	100,000
Guatemala	3,150,000
Netherlands	848,207,000
Peru	15,500,000
Philippine Islands	353,704,000
Saudi Arabia	31,210,000
Venezuela	7,100,000
Total	1,388,971,000

The combined total of domestic and foreign coinage in 1945 amounted to 4,035,105,101 pieces compared with the 1944 record of 3,066,487,270 pieces. The weight of the finished coins was 16,488½ tons, an average daily production of 46 tons, which represented an increased output of 11 tons of coins per day over last year.

Minor Coinage Alloys

Five-cent coin.—The 5-cent piece produced during the year was composed of an alloy of 56 percent copper, 35 percent silver, and 9 percent manganese, with standard weight of 77.16 grains.

One-cent coin.—The composition of the 1-cent piece coined during the year was 95 percent copper and 5 percent zinc, with weight of 48 grains. The alloy was produced by utilizing fired brass cartridge cases made available by the War Department to which virgin copper was added.

Dual Coining Device

Mr. Joseph Steel, Superintendent of Coining at the San Francisco Mint and Mr. William P. Kruse, Machinist at the same institution invented a mechanical device for attaching, at very small cost, to regular coining presses, which makes possible the striking of two coins simultaneously. The result of the use of this device has been to increase the production of coinage presses equipped with it by 90%, so that one press almost does the work of two. This invention has been a large factor in the enormous amount of foreign and domestic coinage produced during this fiscal year; in fact without it the volume of production would have been impossible, since presses had been added to the limit that the crowded conditions of the three coinage mint buildings would permit. This device can be used and is being used on all coinage, domestic and foreign of the sizes of quarters or less.

Bullion Deposit Transactions

Bullion deposit transactions during the year totaled 6,690, including 118 inter-mint service transactions, on which 23,319 assay determinations were made. Included were 29 redeposits of silver at the New York Assay Office, returned from use in war plants, requiring 549 separate assay determinations. This silver was in the form of bar-

end-cuttings and other processing remnants which required melting and other work.

The monetary value of gold and silver receipts during the year amounted to $1,168,362,930 of which $1,090,945,848 comprised inter-institution transfers.

Long-Term Storage of Bullion

There were no transfers of bullion to the depositories for long-term storage during 1945. There were withdrawals from storage, however, of both gold and silver. Gold from Fort Knox in the amount of 29,585,374 fine ounces with a value of $1,035,488,090 was shipped to New York to meet the demand of increased sales to the arts and for other industrial uses, for earmarking purposes and export. Silver withdrawn from storage was used for industrial sales under the Green Act, for Lend-Lease, and for coinage. The total amount of silver withdrawn from West Point amounted to 235,874,956 fine ounces, leaving a balance there of 277,832,017 fine ounces on June 30, 1945.

Gold Operations

Gold acquisitions by the Mints and Assay Offices during the year entered as classified melted receipts amounted to $56,214,889; receipts from the Treasury of domestic coin amounted to $294,900; and transfers between Mint Service institutions, $1,041,755,130. These transactions totaled $1,098,264,919.

Acquisitions included $8,241 of gold received at $20.67+ per fine ounce. The increment on this gold was $5,712.

Gold issue bars manufactured during the year numbered 42,829 and contained 3,550,034 fine ounces of gold with a value of $124,251,205. Gold bars sold for the arts and industrial use during 1945 were valued at $65,290,844, an increase of 161 percent over the $24,977,240 sales the previous year.

Silver Operations

Silver acquisitions by the Mints and Assay Offices during the year amounted to 14,774,100 fine ounces. The total value at an average of $0.4663 per fine ounce, equalled $6,889,235. Acquisitions were as follows:

Item	Amount (fine ounces)	Value
Newly mined domestic silver	74,724	$52,336
Silver contained in gold bullion deposits, etc	435,235	175,268
Silver received in exchange for Government stamped bars	186,344	91,992
Redeposits	14,077,797	6,569,639
Total [1]	14,774,100	6,889,235

[1] Includes 373,609 ounces of silver received for account of Reconstruction Finance Corporation, Office of Metals Reserve Company.

United States subsidiary mutilated and uncurrent coin received for recoinage yielded 1,306,001 fine ounces of silver with a recoinage value of $1,805,427. Also unfit silver dollars with a face value of

$393,881 were melted during the year, yielding 291,075 fine ounces of silver which was recoined into subsidiary coin.

Transfers of silver between mint institutions amounted to 38,043,572 fine ounces, and deposits of silver by foreign governments for coinage by United States Mints totaled 42,864,528 ounces, bringing the total silver receipts during the year to 97,279,276 fine ounces.

Silver consumed in domestic coinage in 1945 amounted to 79,198,517 fine ounces, of which 70,442,547 ounces were used in subsidiary coinage and 8,755,970 ounces in 5-cent coinage.

During the fiscal year 1945 silver certificates in the amount of $161,616 were issued against 125,000 fine ounces of silver bullion valued at $1.29+ per fine ounce, the statutory monetary value of silver. This silver had been acquired at $0.7111+ per fine ounce. The difference between the cost of the silver and the monetary value of such silver was $72,727, and this amount constituted seigniorage.

The price paid for newly mined domestic silver received at the Mint was $0.7111+ per fine ounce, in accordance with the act of July 6, 1939. Most of the newly mined domestic silver, however, was sold direct to consumers rather than to the Mint, under War Production Board approval. A slight price differential was allowed by the Office of Price Administration for such sales.

The market price of foreign silver remained fixed at $0.45 per fine ounce throughout the year.

Mint sales of silver under the Green Act in 1945 amounted to 68,147,835 fine ounces; silver lend-leased to other governments amounted to 119,837,110 fine ounces; and silver leased to Defense Plant Corporation, etc., amounted to 877,715,175 ounces on June 30, 1945 compared with 891,792,971 ounces on June 30, 1944.

Silver issue bars manufactured by the Mint Service institutions during the year numbered 3,083 containing 450,343 fine ounces.

In addition, the New York Assay Office manufactured 775,275 coinage ingots containing 32,294,496 fine ounces of silver for use at the Philadelphia Mint.

Refineries

Electrolytic refineries are located at the New York, San Francisco, and Denver institutions. Because of manpower shortages, however, the electrolytic product during the fiscal year comprised 1,363,783 fine ounces of gold and 904,070 fine ounces of silver, or a total of 78 tons. The refinery at Denver was operated during most of the year, negligible refining operations were carried on at New York, and the San Francisco refinery was closed throughout the year.

Stocks of unrefined gold and silver bullion on hand at all mints and assay offices approximated 1,500 tons on June 30, 1945.

Medals

Production in the Medal Department at the Philadelphia Mint for the armed forces continued as rapidly as facilities permitted during the year. Output included 119,447 medals, 68,577 lapel buttons and 145,934 ribbon bars.

The medals made for the Navy, Coast Guard, Marine Corps and Army included the Navy Cross, Silver Star, Distinguished Flying Cross, Navy and Marine Corps Medal, Air Medal, Purple Heart,

Expert Rifleman, Expert Pistol Shot, Life Saving Medal, Peary Polar Expeditionary and Bronze Star.

In addition, 6,535 various commemorative medals out of stock were sold to the public at a value of $9,921.

Stock of Coin and Monetary Bullion in the United States

On June 30, 1945 the estimated stock of domestic coin in the United States totaled $1,623,280,700 and consisted of the following:

Silver dollars	$493, 943, 078
Subsidiary silver coin	825, 798, 486
Minor coin	303, 539, 136
Total	1, 623, 280, 700

During the fiscal year 1945 the Mints issued coins with a face value of $146,630,912. Issues were as follows:

Denomination	Number of pieces	Face value
Standard dollars	21, 869, 458	$21, 869, 458
Half dollars	60, 208, 541	30, 104, 270
Quarter dollars	124, 950, 491	31, 237, 623
Dimes	338, 022, 309	33, 802, 231
5-cent pieces	223, 876, 000	11. 193, 800
1-cent pieces	1, 842, 353, 000	18, 423, 530
Total	2, 611, 279, 799	146, 630, 912

The Treasury stock of gold bullion on June 30, 1945, was valued at $20,212,838,145. The stock of silver bullion on the same date amounted to 1,871,355,592 fine ounces.

Production of Gold and Silver in the United States

Production of domestic gold and silver by refineries in the United States for the calendar year 1944 was as follows: Gold—1,022,238 fine ounces with monetary value of $35,778,330. Silver—35,651,049 fine ounces. This was a decreased output over the calendar year 1943 of 372,284 ounces and 5,249,072 ounces of gold and silver respectively.

*Industrial Consumption of Gold and Silver in the United States**

Gold consumed in industry and the arts in the United States for the calendar year 1944 is estimated ar $136,218,913. Gold returned from industrial use amounted to $25,678,940, giving a net consumption of new gold of $110,539,973. The net increase of new gold issued in 1944 amounted to $24,196,620 over 1943, going chiefly into jewelry.

Silver consumed in industry and the arts for the calendar year 1944 is estimated at 176,289,409 fine ounces. Silver returned from industrial use amounted to 56,189,400 ounces, giving a net industrial consumption of new silver of 120,100,000 fine ounces, or an increase of 2,100,000 ounces over 1943. Silver was used chiefly for war purposes which included solders, brazing alloys, photographic processes and products, electrical parts, airplane engine bearings, silver-plated eating utensils for the Army and Navy, desalination equipment, medicines and dental materials, and other items.

*See table on page 38.

Appropriations, Income, and Expenses

Regular appropriations available for the mint service during the fiscal year 1945 totaled $5,687,800 consisting of the following: $168,000 Office of Director of the Mint; $12,800, Transportation of Bullion and Coin; $5,500,000, Salaries and Expenses, Mints and Assay Offices; and $7,000 Printing and Binding.

Supplemental appropriations under the First Deficiency Appropriation Act, 1945, approved April 25, 1945, provided additional amounts as follows: $7,500, Transportation of Bullion and Coin; $815,000, Salaries and Expenses, Mints and Assay Offices; and $2,500, Printing and Binding.

Income, expenses, and reimbursements for the year are given in the table below, together with the number of employees as of June 30, 1945, at the several mint service institutions.

Income, Expenses, Reimbursements, and Employees, Fiscal Year 1945

Institution	Gross income	Gross expenses	Excess of income over expenses	Reimbursements	Number of employees on June 30, 1945
Philadelphia	$65,459,230	$7,536,173	$57,923,057	$3,325,349	2,608
San Francisco	16,276,734	2,376,543	13,900,191	1,613,339	424
Denver	11,829,461	1,875,436	9,954,025	941,279	437
New York [1]	37,023,014	660,445	36,362,569	66,116	174
Seattle	8,217	20,801	−12,584		6
Fort Knox		92,520	−92,520		36
Bureau of the Mint		174,418	−174,418		51
Total	[2] 130,596,656	12,736,336	+117,860,320	5,946,083	3,736

[1] Includes Assay Office at New York City and Silver Bullion Depository at West Point.
[2] Income includes the following:
Increment to $35 per ounce on revalued gold—$5,712.
Seigniorage on silver coin—$56,545,254.
Seigniorage on minor coin—$21,506,021.
Seigniorage on silver bullion revalued—$72,727.
Profit on sale of silver bullion—$46,085,879.

Coinage Production by Mint, Fiscal Year 1945

Domestic Coinage

[1] 35 percent silver, 56 percent copper, 9 percent manganese.
[2] 95 percent copper, 5 percent zinc.
[3] 70 percent copper, 30 percent zinc.
[4] 12 percent nickel silver, metal furnished by Netherlands Government.
[5] 12 percent nickel, 65 percent copper, 23 percent zinc.
[6] 12 percent nickel, 70 percent copper, 18 percent zinc.
[7] In addition, 30,430 gold discs .916⅔ fine, were made by the Philadelphia Mint for Saudi-Arabia.

Mint Issue of Fine Gold Bars for Arts and Industry, Fiscal year 1945

The value of the fine gold bars issued for arts and industry, in exchange for cash, by the United States Mints at Philadelphia, San Francisco, and Denver, and the assay office at New York, during the fiscal year 1945, was as follows:

Month	Value of bars issued	Month	Value of bars issued
1944:		1945—Continued.	
July	$1,648,360.16	March	$8,861,603.45
August	3,029,877.65	April	6,460,577.88
September	3,927,354.91	May	5,435,561.80
October	5,682,976.99	June	8,527,485.99
November	5,596,248.64		
December	4,650,029.86	Total	65,290,843.72
1945:			
January	6,146,676.37	Prior fiscal year	24,977,240.48
February	5,324,090.02		

Sales of Silver Under the Green Act During the Fiscal year 1945

Treasury sales of silver under terms of the Green Act amounted to 68,147,834.85 fine ounces during 1945. This silver was sold mainly for industrial use, but included 15,745,826.13 ounces sold to the Philippine Government for coinage executed by United States Mints. Sales by month were as follows:

Month	Philadelphia	San Francisco	Denver	New York	Total
1944:	*Fine ounces*	*Fine ounces*	*Fine ounces*	*Fine ounces*	*Fine ounces*
July		7,499.56		3,259,379.22	3,266,878.78
August				3,089,827.48	3,089,827.48
September				1,879,916.87	1,879,916.87
October		2,507,757.91	5,353,098.62	3,538,108.66	11,398,965.19
November		29,999.48		3,985,331.51	4,015,330.99
December				2,475,258.12	2,475,258.12
1945:					
January		9,998.09		2,176,434.35	2,186,432.44
February		29,997.82		5,156,039.34	5,186,037.16
March		2,688,309.29	916,296.16	7,457,234.10	11,061,839.55
April		1,507,982.70	2,893,566.83	5,624,173.85	10,025,723.38
May	9,028.22	59,994.83		6,304,381.58	6,373,404.63
June				7,188,220.26	7,188,220.26
Total, fiscal year 1945	9,028.22	6,841,539.68	9,162,961.61	52,134,305.34	68,147,834.85
Total, fiscal year 1944		86,901.48		40,704,665.26	40,791,566.74
Grand total sales [1]	9,028.22	6,928,441.16	9,162,961.61	92,838,970.60	108,939,401.59

[1] Sales under the Green Act (Public Law 137, 78th Cong.) were first made in July 1943.

Lend-Lease Silver

Silver made available to foreign governments by the Treasury under lend-lease procedure amounted to 119,837,109.76 fine ounces during the fiscal year 1945. Details are as follows:

Month	Country	Mint office	Fine ounces
1944:			
July	Saudi Arabia	Philadelphia	3,437,500.00
Do	Australia	San Francisco	3,364,000.00
August	United Kingdom	New York	18,000,000.00
September			
October	Saudi Arabia	Philadelphia	1,031,250.00
November	do	do	3,437,500.00
December			
1945:			
January	India	New York	20,000,000.00
February			
March	Netherlands	Philadelphia	3,972,288.53
Do	do	San Francisco	7,594,571.23
Do	United Kingdom	New York	14,000,000.00
April			
May	India	New York	45,000,000.00
June			
Total fiscal year 1945			119,837,109.76
Total fiscal year 1944			211,359,650.39
Grand total transactions [1]			334,271,760.86

[1] The first lend-lease transaction occurred in May 1943.

Receipts and Disbursements of Gold Bullion and Balances on Hand

Receipts and disbursements of gold bullion during the fiscal year 1945, and balances on hand June 30, 1945, as compared with June 30, 1944, are shown in the following table:

Institution	Balance on hand June 30, 1944	Receipts during fiscal year 1945 (details below)[1]	Total	Disbursements during fiscal year 1945 (details below)[1]	Balance on hand June 30, 1945
Philadelphia	$6,318,756.92	$2,985,005.59	$9,303,762.51	$3,541,199.92	$5,762,562.59
San Francisco	368,356,733.32	7,830,784.34	376,187,517.66	826,867.90	375,360,649.76
Denver	5,690,290,875.25	5,462,895.42	5,695,753,770.67	387,455.27	5,695,366,315.40
New York	544,756,515.69	1,079,447,821.91	1,624,204,337.60	999,827,345.50	624,376,992.10
Seattle	1,172,604.90	2,537,971.70	3,710,576.60	3,429,766.48	280,810.12

Minor Coins Outstanding

The following statement shows the coinage of minor coins, by denomination and alloy, the amount on hand at the mints, issued, melted, and outstanding on June 30, 1945. Minor coins were first manufactured at the Philadelphia Mint in 1793, at the San Francisco Mint in 1908, and at the Denver Mint in 1911. During the fiscal

year 1945, 5-cent coins of copper-silver-manganese alloy and 1 cent-coins of copper-zinc alloy were minted.

Item	Total coined	On hand at mints unissued	Issued	Melted	Issued amount outstanding—June 30, 1945
Half cents, copper [1]	$39,909.11		$39,909.11	$2.47	$39,906.64
Cents:					
Copper	1,562,887.44		1,562,887.44	383,774.77	1,179,112.67
Nickel-copper	2,007,720.00		2,007,720.00	809,217.35	1,198,502.65
Bronze and copper-zinc	135,139,000.98	$5,152,270.00	129,986,730.98	2,198,893.86	127,787,837.12
Zinc-coated steel	10,938,386.70		10,938,386.70	6,902.81	10,931,483.89
2 cents, bronze	912,020.00		912,020.00	344,215.88	567,804.12
3 cents, nickel-copper	941,349.48		941,349.48	288,067.08	653,282.40
5 cents:					
Nickel-copper	136,322,816.60		136,322,816.60	12,386,690.16	123,936,126.44
Copper-silver-manganese	35,767,085.00	502,250.00	35,264,835.00	8,495.90	35,256,339.10
Total	323,681,175.31	5,654,520.00	317,976,655.31	16,426,260.28	301,550,395.03

[1] There is no record of the earlier melting of the old copper half cents, but it is believed that few, if any, are now in circulation.

Proof Gold and Proof Silver

In order to maintain uniformity in assay of bullion in the mint service, all proof gold and proof silver are made at one institution and furnished other institutions when required. Proof gold is made at the New York Assay Office and proof silver at the Philadelphia Mint.

During the 1945 fiscal year, 533.02 ounces of proof gold and 1,467.08 ounces of proof silver were made.

The New York Assay Office used 55.60 ounces of proof gold during the year and furnished the Denver Mint with 50.00 ounces.

The Philadelphia Mint used 220.00 ounces of proof silver during the year and furnished 136.07 ounces to the New York Assay Office, San Francisco Mint, and the Bureau of the Mint Laboratory. In addition, 1 ounce of proof gold and 3 ounces of proof silver were sold to technical institutions outside the mint service.

Operations of the Melting and Refining and of the Coining Departments, Fiscal Year 1945

The aggregate quantity of metals operated upon in the above-mentioned departments of the coinage mints and assay office at New York during the fiscal year ended June 30, 1945, was 8.7 million fine ounces of gold and 635.5 million fine ounces of silver. There were also operated upon at the coinage mints 1,032.9 million ounces of minor coinage metal. The figures in the table following are based on the figures obtained at the settlements of the accounts.

Legal limits of wastage on the whole amount delivered by the superintendent to operative offices, as prescribed in section 355, title 31, United States Code, are as follows: Melter and refiner—gold, 0.001; silver, 0.0015; coiner—silver, 0.001.

GOLD BULLION

Wasted in refining and coining operations	133,032.43	7,304.11	3,361.45			143,697.99
Net gain or loss	[1]128,228.17	42,445.69	2,778.22	17,994.91	1,018.25	[1]63,991.10

[1] Net loss.

Wastage of Coinage Metal and Loss on Sale of Sweeps

The value of metals wasted in the operative departments during the fiscal year ended June 30, 1945, was $174,109.22. A loss of $12,626.46 occurred from the difference between the assay value of the bullion contained in sweeps sold and the amount received for the same. Details are given in the following table:

Item	Mint at—			Assay office at New York	Total
	Philadelphia	San Francisco	Denver		
Silver wastage:					
Melting and refining department	$117,561.38				$117,561.38
Coining department	15,471.05	$7,304.11	$3,361.45		26,136.61
5-cent coinage wastage:					
Melting and refining department	7,288.03	60.26	259.36		7,607.65
Coining department	308.71	42.32	46.45		397.48
Bronze wastage:					
Melting and refining department	19,037.43	636.48	1,248.72		20,922.63
Coining department	845.37	609.44	28.66		1,483.47
Loss on sales of sweeps	4,787.69	4,853.03	2,108.59	$897.15	12,626.46
Total wastage and loss	165,299.66	13,485.64	7,053.23	897.15	186,735.68
Reimbursements:					
Silver, departmental wastage offset by other departmental surpluses		7,304.11	3,361.45		10,665.56
5-cent alloy and bronze wastage from minor coinage profits	23,137.31	1,348.50	1,583.19		26,069.00
5-cent alloy wastage offset by charges to Foreign metals accounts	11.18				11.18
Other wastages, and loss on sweeps from appropriations	142,151.17	4,833.03	2,108.59	897.15	149,989.94
Total reimbursements	165,299.66	13,485.64	7,053.23	897.15	186,735.68

Employees

The total number of officers and employees of the Mint Service, by institution and department, as of June 30, 1945, was as follows:

Institution	Established under act of—	Number of employees, by departments										
		General									Total	
		Administrative, etc.	Custodial: Guards	Custodial: Other	Mechanical	Deposits division	Engraving	Assaying	Coining	Melting and refining	June 30, 1945	June 30, 1944

Assay Commission's Annual Test of Coin for 1944

Section 363, title 31, United States Code, provides for an annual test of the domestic coinage executed during each calendar year by a commission, of whom part are ex officio members, the others, who serve without compensation, being appointed by the President. The purpose is to secure a due conformity in the silver coins to their respective standards of fineness and weight. The Commission, which met at the Philadelphia Mint February 14, 1945, reported the following results of their examination of the 1944 coinage:

REPORT OF THE COMMITTEE ON COUNTING

In accordance with section 3539 of the Revised Statutes, the committee on counting reports that the packages said to contain the pieces reserved by the several mints for the trial of coins were delivered to us by the Superintendent of the Mint at Philadelphia. Verification of the coins reserved were made by checking same against the original record of coin deliveries and reservations for assay in respect to the Philadelphia Mint, and against transcripts furnished the committee showing reservations for assay from the Denver and San Francisco Mints.

At random we selected from the deliveries a certain number of packages, and it was the intention of the committee to include all denominations. Of the packages selected the coins contained therein were counted, and it was found that a sufficient number of pieces had been reserved in each instance as against the amounts shown to be delivered to the superintendents of the respective mints for that particular day, in accordance with the provisions of Section 3539 of the Revised Statutes of the United States, which requires that one silver coin be reserved out of each 2,000 delivered.

REPORT OF THE COMMITTEE ON ASSAYING

In compliance with section 3547 of the Revised Statutes, the Committee on Assaying is pleased to report that the assays have been completed on samples

taken from the different lots of coin, representing all denominations of silver coined during the calendar year 1944, by the United States Mints at Philadelphia, Denver, and San Francisco.

No gold was coined at any of the mints during the year.

The results of assays on individual coins and mass melts of coins are satisfactory, being well within the limits of tolerance, which is three one-thousandths for silver coins.

The highest and lowest assay on an individual coin from each of the three mints is as follows:

	Highest	*Lowest*
Philadelphia Mint	901. 3	898. 6
Denver Mint	900. 5	898. 7
San Francisco Mint	900. 5	898. 6

Result of mass melting:

Philadelphia Mint	899. 0
Denver Mint	899. 6
San Francisco Mint	899. 3

The assay balances were tested and found to be in adjustment. The nitric acid used for assaying was found to be free of chlorine and the weights used for weighing the samples for assay were checked against a set of weights that had been standardized by the National Bureau of Standards.

REPORT OF THE COMMITTEE ON WEIGHING

The committee on weighing reports that it selected at random a total of 210 coins, consisting of 121 coins from the Philadelphia Mint, 39 coins from the Denver Mint, and 50 coins from the San Francisco Mint. These coins were taken from 922 different deliveries and are believed to be adequately representative of the year's coinage of each mint.

The coins were weighed directly against weights from the set of coin and grain weights regularly reserved for the use of the Commission. This set was delivered under seal of the National Bureau of Standards, and was accompanied by a certificate from that Bureau showing that the errors of all weights of the set were negligible.

Weighings were made with a precision of 0.01 grain on a balance, the sensitivness, accuracy, and reliability of which were tested and found adequate before the beginning of the work on February 14, and again on the morning of February 15.

It is to be noted that the weight of each coin was well within the tolerance allowed by law.

The following table shows the maximum deviation of the heaviest and lightest coins of each denomination from each mint as found from individual weighings:

Denomination	Legal deviation allowed	Actual deviation					
		Philadelphia		Denver		San Francisco	
		Heavy	Light	Heavy	Light	Heavy	Light
	Grains	*Grains*	*Grains*	*Grains*	*Grains*	*Grains*	*Grains*
Half dollar	1.5	1.07	0.02	0.36	0.03	0.44	0.26
Quarter dollar	1.5	1.09	.04	.58	.04	.35	.21
Dime	1.5	.79	.03	.76	.10	.45	.04

Considering the 210 coins as a group, the average deviation, with regard to sign was found to be only 0.024 grains. In other words, of the coins weighed the light coins were very nearly offset by the heavy coins. The average error without regard to sign was 0.360 grain. In general, any coin taken at random from any Mint appears equally likely to be heavy or light.

The foregoing report, covering the operations of the mints, assay offices, and bullion depositories of the United States for the fiscal year ending June 30, 1945, is respectfully submitted.

NELLIE TAYLOE ROSS,
Director of the Mint.

HON. FRED M. VINSON,
Secretary of the Treasury.

REPORT OF THE DIRECTOR OF THE MINT ON THE PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1944

REPORT ON PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1944

INTRODUCTION

The official estimate of the production of gold and silver in the United States is made by the Bureau of the Mint with the cooperation of the Bureau of Mines, the latter making a mine canvass in each State and the former working backward from mint deposits through refineries, smelters, and other reduction works to the mine production estimate made by the former. The official estimate represents the material received at mint-service offices and private refineries from the States and Territories of the United States, including the Philippine Islands, which comes to the United States for reduction. The difference between this estimate and the mine production estimate is almost entirely due to the time element involved in the reducing processes, since differences for series of years are shown by comparison to practically offset each other. The two systems thus verify and support each other.

Gold production of the United States, including Alaska, for the calendar year 1944, is estimated to have been 1,022,238 fine ounces valued at $35,778,330. Silver production is estimated at 35,651,049 fine ounces valued at $25,351,855 ($0.7111+per ounce). A comparison of these figures with those of 1943 indicates decreases amounting to 372,284 ounces of gold and 5,249,072 ounces of silver.

In 1944 Utah was again the State of largest gold production with 353,550 ounces. Arizona, Nevada, California and Colorado followed in order with over 100,000 ounces for each.

In 1944 Idaho ranked highest in silver production with 10,645,179 ounces; Utah ranked second with 8,104,520 ounces; Montana and Arizona third and fourth with 6,669,273 and 4,674,097 ounces, respectively.

A brief review of mining conditions, for which acknowledgment is made to the Bureau of Mines, follows. The production figures therein differ, as explained above, from the Bureau of the Mint production estimates. Further information concerning the review can be obtained by those interested by addressing the Bureau of Mines at Washington, D. C.

ALASKA

The value of the production of gold and silver from mines in Alaska was $1,734,862 in 1944, compared with $3,515,832 in 1943, according to H. Foster Bain, United States Department of the Interior, Bureau of Mines. Gold recovered from ores and gravels totaled 49,296 fine ounces valued at $1,725,360, a decrease of 50 percent from the 1943 output and only 7 percent of the quantity produced in 1941. Thus,

from 1941 to 1944 virtually all of the modern gold-mining industry, which has meant so much to Alaska, was wiped out, becoming a war casualty.

Of the total Alaska output of gold in 1944, placer mines produced 68 percent and floating connected-bucket dredges 53 percent, compared with 19 percent for dredges in 1943. Nine dredges operated in 1944, compared with 7 in 1943, all under permits from the War Production Board. Other placer operations numbered 189 and recovered 15 percent of the total gold produced, compared with 22 percent in 1943.

Nine lode mines were active in 1944, compared with 8 in 1943, and these contributed 32 percent of the total gold output, compared with 58 percent in 1943. The Alaska Juneau Gold Mining Co. at Juneau remained the largest single producer of lode gold. This company, operating at a greatly reduced capacity, closed its mine indefinitely on April 9, 1944, as a result of a manpower shortage and a War Labor Board decision to award a 14-cent wage increase to all company employees. The Cleary Hill Mines Co. operated its mine on Cleary Creek in the Fairbanks district under a lode-mine permit from the War Production Board, and the Alaska Pacific Consolidated Mining Co. mine in the Willow Creek district north of Wasilla, idle since August 8, 1943, was permitted to resume operations in May. Six other lode mines produced small quantities of gold ore.

The output of recovered silver in 1944 totaled 13,362 fine ounces valued at $9,502, a decline of 69 percent from the 1943 production. All was produced as a byproduct of gold mining, and 69 percent came from lode operations. The Alaska Juneau mine was the largest producer.

The total production of gold and silver in Alaska in terms of recovered metals from 1880 through 1944 has been 25,788,530 ounces of gold, valued at $615,613,152, and 19,738,522 ounces of silver, valued at $14,040,723.

ARIZONA

The value of the production of gold, silver, copper, lead, and zinc from mines in Arizona was $113,094,806 in 1944 compared with $121,212,902 in 1943—a decrease of 7 percent; however, it exceeded that for the same five metals in any other State, according to G. E. Woodward and Paul Luff of the United States Department of the Interior, Bureau of Mines. The value of the gold was $3,925,670—a 35-percent decline from 1943; silver, $3,124,650—a 23-percent decline; and copper, $96,741,810—an 8-percent decline. The value of the lead was $2,673,120—a 30-percent gain; and zinc, $6,629,556—a 56-percent gain. The value of the gold production represented 3 percent of the State total, silver 3 percent, copper 86 percent, lead 2 percent, and zinc 6 percent.

Nearly all of the gold mines in Arizona were idle in 1944 as a result of the Government gold-mine closing order issued in October 1942; however, the primary cause of a loss in output of gold, silver, and copper in 1944 was a serious shortage of labor. The chief source of gold and silver in 1944 was, as in 1943, copper ore.

The output of recoverable gold in Arizona in 1944 was 112,162 fine ounces—a 35-percent decrease from 1943. Gold from siliceous ores (chiefly dry and siliceous gold ore) declined 15,093 ounces or more

than 58 percent, that from copper ore, 42,633 ounces or nearly 32 percent, and that from zinc-lead ore, 2,399 ounces or nearly 25 percent. Gold from placers decreased from 319 fine ounces in 1943 to 242 ounces in 1944; no dredges of any type were active in 1944. Copper ore yielded 81 percent of the State total gold, siliceous ores nearly 10 percent, and zinc-lead ore more than 6 percent. Gold recovered from ore and old tailings cyanided amounted to 656 ounces; from concentrates smelted, 60,710 ounces; from crude ore sent direct to smelters, 50,554 ounces; and from placers, 242 ounces. No gold ore was treated at amalgamation mills in 1944, and the siliceous material treated at cyanidation and cyanidation-concentration plants decreased from 144,338 tons in 1943 to 30,443 tons in 1944; 2 straight cyanidation plants treated 2,950 tons of material in 1944 compared with 4 plants that treated 24,700 tons in 1943. The only important cyanidation plant was the one at the Mammoth-St. Anthony Limited property and it closed down in July. The chief gold-producing districts in Arizona in 1944 were the Warren, Ajo, Verde, Pioneer (Superior), Old Hat, Big Bug, and Copper Mountain (Morenci). The Copper Queen (Bisbee) branch of the Phelps Dodge Corporation continued to be the leading gold producer in Arizona, although its output declined 35 percent from that in 1943; it was followed by the New Cornelia mine in Pima County, the United Verde mine in Yavapai County, the Magma mine and the Mammoth-St. Anthony Limited property both in Pinal County, the Morenci branch of the Phelps Dodge Corporation in Greenless County, and the Iron King mine in Yavapai County. These 7 properties produced 84 percent of the State total output.

The total gold production in the State of Arizona, in terms of recovered metals, from 1860 to 1944, inclusive, has been 10,711,912 ounces.

The output of recoverable silver in Arizona in 1944 was 4,394,039 fine ounces—a 23-percent decrease from 1943. The chief decreases were 1,260,601 ounces in silver from copper ore, 193,711 ounces from siliceous ores, and 24,753 ounces from zinc-lead-copper ore. The principal increase was 151,170 ounces from zinc-lead ore. Copper ore yielded 71 percent of the State total silver; zinc-lead ore, 18 percent; siliceous ores, 4 percent; zinc-copper ore, nearly 4 percent; lead ore, 2 percent; and zinc-lead-copper ore, 1 percent. The Phelps Dodge Corporation continued to be the chief silver producer in Arizona, although its output was nearly 32 percent less than in 1943; its four properties (Copper Queen, Morenci, New Cornelia, and United Verde) produced 68 percent of the State gold output, nearly 59 percent of the silver, and 58 percent of the copper. Other large silver producers in Arizona in 1944 were the Magma, Iron King, Trench-Flux, San Xavier (Eagle-Picher Mining & Smelting Co.), Shattuck Denn, and Castle Dome properties. The chief silver-producing districts were the Warren (Bisbee), Verde (Jerome), Pioneer (Superior), Ajo, Copper Mountain (Morenci), Big Bug, Globe-Miami, Harshaw, and Pima; nearly 49 percent of the total silver came from the Warren and Verde districts, but the output from these districts decreased 1,148,400 ounces from 1943.

The total silver production in the State of Arizona in terms of recovered metal, from 1860 to 1944, inclusive, has been 285,860,433 ounces.

CALIFORNIA

California gold production in 1944 fell below that in any year since 1848, the year James A. Marshall made his historic discovery in the gravels of the American River near Coloma, according to Charles White Merrill, of the United States Department of the Interior, Bureau of Mines. Higher wages, enlistment of miners in the armed forces, migration of miners to war industries, rising prices of supplies and equipment and difficulties in obtaining them, increased taxes, and the fixed price for gold were factors which accelerated the downward trend which has been under way since 1941. War Production Board Order L–208 promulgated October 8, 1942, was in force throughout 1944 with the result that no gold mines except the very smallest could operate except under special grant. California gold miners were issued grants as follows: During 1942, 18; during 1943, 27; and during 1944, 25; none was rescinded. Of the 119 grants issued domestic gold miners, California producers received 70 and those in all other States 49. California has never derived a large part of its gold output as a byproduct from base metal mines; this proportion was much higher in 1944, however, than in preceding years, particularly those before 1942.

Monthly production figures covering the period since January 1937 show an upward trend until a peak was reached during 1940. In 1941, however, a reaction set in which gained headway in 1942. By February 1943 a production of 8,547 ounces was reported compared with a high of 149,718 ounces recorded in December 1940. The monthly fluctuations were narrower in 1944; the monthly average for the year was 9,781 ounces compared with a monthly average of 12,361 in 1943; in 1940 the monthly average was 121,306 ounces. The 1944 monthly data revealed no trend, the production in January being 10,216 ounces and in December 10,218 ounces.

The output of recoverable gold from California ores, gravels, and re-treated tailings in1944 was 117,373 fine ounces valued at $4,108,055 compared with a production of 148,328 ounces valued at $5,191,480 in 1943; the decrease in both quantity and value was 21 percent. In 1944, 109 lode mines produced 42,324 ounces of gold, valued at $1,481,340, and 66 placer mines produced 75,049 ounces of gold, valued at $2,626,715. Placer mines supplied 64 percent and lode mines 36 percent of the total in 1944 compared with 60 percent for placer mines and 40 percent for lode mines in 1943; the placer-lode gold production ratio was the highest since 1900, when separate annual data were first compiled and almost certainly the highest since large scale hydraulicking was terminated by the Sawyer decision of 1884. Of the gold derived from lode operations 75 percent was recovered from dry gold ore, 9 percent from zinc ore, 8 percent from copper ore, 5 percent from lead ore, and the remainder from gold-silver, silver, zinc-copper, and zinc-lead ores. Metallurgical data show that 35 percent of the lode gold in 1944 (52 percent in 1943) was recovered by smelting of concentrates, 35 percent (20 percent in 1943) by amalgamation of ore and old tailings, 22 percent (14 percent in 1943) by cyanidation of ore, old tailings, and concentrates, and 8 percent (14 percent in 1943) by smelting of ore and old tailings.

Although gold output was not as greatly reduced at placers as at lode mines, nevertheless, the placer production decreased 16 percent.

In the following data on placer mining 1943 figures are given in parentheses. Dredging was the leading method of working placer deposits in 1944 both as to yardage of gravel washed and the quantity of placer gold recovered. Floating dredges of the connected-bucket type washed 21,524,000 (17,880,000) cubic yards of gravel and recovered 64,925 (66,999) ounces of gold, valued at $2,272,375 ($2,344,965), or 87 (75) percent of the placer gold produced in the State in 1944. Dragline dredges (those having a floating washing plant to which gravel is delivered by a dragline excavator) washed 1,213,000 (3,180,000) yards of gravel, which yielded 6,241 (14,196) ounces of gold, valued at $218,435 ($496,860). Nonfloating washing plants to which gravel was delivered by mechanical means washed 223,000 (547,000) yards of gravel and recovered 1,210 (2,997) ounces of gold, valued at $42,350 ($104,895). Hydraulic mines produced 838 (1,723) ounces of gold valued at $29,330 ($60,305) derived from 212,000 (366,000) yards of gravel; 3,800 (4,500) yards of gravel from drift mines were washed from which 424 (970) ounces of gold, valued at $14,840 ($33,950) were recovered. Small scale hand-operated equipment, including small sluice boxes, long toms, dip boxes, rockers, pans, and dry washers, was used in the production of 1,411 (2,540) ounces of gold, valued at $49,385 ($88,900).

Yuba and Sacramento Counties, because of the productivity of those connected-bucket dredges which were granted permission to operate with older men under Order L–208, ranked first and second respectively among California's leading gold-producing counties in 1944. Nevada County stood in third place in 1944; almost all of the gold produced in the county was credited to lode mines in the Grass Valley-Nevada City district. Butte County which occupied fourth place, derived nearly two-thirds of its 1944 gold output from dragline dredging and nearly one-third from connected-bucket dredging. Tuolumne County, which occupied fifth place, derived most of its 1944 gold production from the Eagle Shawmut mine. Other counties producing over $100,000 in gold in 1944, listed in order of output, were Mariposa County (gold ore and zinc ore), San Joaquin County (dredging), Stanislaus County (dredging), Siskiyou County (copper ore), and Sierra County (gold ore).

The principal gold-producing mines in California in 1944, listed by operators in order of output, were the Yuba Consolidated Gold Fields (Yuba Unit), Yuba County (dredge); Natomas Co., Sacramento County (dredge); Empire Star Mines Co., Ltd., and New Verde Mines Corporation (joint operators of Empire Star mines) Nevada County (gold ore); Idaho Maryland Mines Corporation, Nevada County (gold ore); Golden Feather Dredging Co., Butte County (dragline dredge); Miller and Clemson, Tuolumne County (gold ore); Tuolumne Gold Dredging Corporation, Stanislaus County (dredge); Oroville Gold Dredging Co., Butte County (dredge); Gray Eagle Copper Co., Siskiyou County (copper ore); Mount Gaines Mining Co., Mariposa County (gold ore); Original Sixteen to One Mine, Inc., Sierra County (gold ore); Red Cloud Mines, Inc., Mariposa County (zinc ore), and Shoshone Mines, Inc., Inyo County (lead ore).

The output of silver from California ores, gravels, and retreated tailings in 1944 was 778,936 fine ounces, valued at $533,910, compared with a production of 609,075 ounces, valued at $433,120 in 1943. Of the lode silver 39 percent was derived from lead ore, 25 percent from

zinc ore, 12 percent from zinc-lead ore, 11 percent from zinc-copper ore, 5 percent from tungsten ore, 3 percent each from copper ore and gold ore, and 2 percent from other dry ores. A small quantity of silver was recovered as a byproduct of dredging and other placer mining carried on principally for gold. Smelting of concentrates supplied 52 percent of the lode silver recovered in the State; smelting of ore and old tailings 46 percent; and cyanidation and amalgamation of ore and old tailings 2 percent.

The principal silver-producing mines in California in 1944, listed by operators and in order of output, were Darwin Mines, Arthur J. Theis, Trustee, Inyo County (lead ore); Red Cloud Mines, Inc., Mariposa County (zinc ore); Shoshone Mines, Inc., Inyo County (lead ore); The Mountain Copper Co., Ltd., Shasta County (copper ore); Louis Warnken, Jr., Inyo County (lead ore); United States Vanadium Corporation, Inyo County (tungsten ore); Eagle Shawmut mine (Penn Division), Calaveras County (zinc ore); G. Ivan Smith, Calaveras County (zinc ore); Blue Light Silver Mines Co., Orange County (zinc ore); and L. D. Foreman & Co. (Last Chance slag dump), Inyo County (lead ore).

CENTRAL STATES

No mine production of gold was reported from ores mined in the Central States from 1941 to 1944, inclusive. The output of recoverable silver in 1944 totaled 148,898 ounces valued at $105,883, compared with 161,917 ounces valued at $115,141 in 1943, according to A. J. Martin of the United States Department of the Interior, Bureau of Mines. Three States—Missouri, Illinois, and Michigan—contributed to the output in both years. Most of the Missouri production (92,243 ounces) was derived from refining some of the lead bullion obtained from Southeastern Missouri lead ores (largely from the mines of the St. Joseph Lead Co.). Copper concentrates made in milling lead-copper-cobalt-nickel-iron ore from the St. Louis Smelting & Refining Co. mines at Fredericktown also yielded some silver. In Illinois 2,437 ounces of silver were recovered from lead concentrates made in milling zinc-lead fluorspar and lead fluorspar ores. Copper ore from Michigan yielded 54,218 ounces of recoverable silver, most of which was derived from copper bullion shipped by the Quincy Mining Co. to the electrolytic refinery at Laurel Hill, N. Y. Some native silver was recovered in mill jigs and by hand picking from tables in the Calumet and Hecla and Quincy mills; that alloyed with copper was treated by ammonia leaching to remove the copper before shipment to the mint. Considerable silver not reported as mine production is retained in copper bullion used for making commutators in electric motor armatures, engravers plate, trolley wire, and other articles. The quantity of silver in this bullion ranges from 16 to 26 ounces to the ton. Of this quantity, about 10 ounces are derived directly from the ore and the rest is purchased from dealers and added to the bullion. Bullion containing the added silver brings a premium of one-half cent a pound. The silver is said to raise annealing temperatures, prevent brittleness, facilitate soldering, and increase hardness and conductivity.

COLORADO

Colorado gold production in 1944 fell below that in any year since 1875, according to Richard H. Mote, of the United States Department

of the Interior, Bureau of Mines. Gold recovered from Colorado mines in 1944 totaled 111,455 fine ounces, valued at $3,900,925, a 19-percent decrease in both quantity and value from the 1943 output.

The total ore sold or treated in Colorado was 1,550,422 tons in 1944 compared with 1,631,318 tons in 1943. The number of producing lode mines decreased from 235 in 1943 to 196 in 1944; the number of placer mines decreased from 17 to 13.

The principal gold-producing districts in 1944 were: Cripple Creek, Teller County, which produced 28 percent of the State output of recovered gold; Animas, San Juan County, 25 percent; California (Leadville), Lake County, 18 percent; Upper San Miguel, San Miguel County, 17 percent; Sneffels, Ouray County, 3 percent; Summitville, Rio Grande County, 2 percent; Ten Mile, Summit County, 1 percent; and Buckskin, Park County, 1 percent. Dry and siliceous ores yielded 83 percent of the State total gold; zinc-lead ore, 15 percent; and copper, lead, and zinc ores and small placer operations, 2 percent.

Mine production of recovered silver in Colorado in 1944 was 2,248,830 fine ounces valued at $1,599,168, a decrease of 16 percent in both quantity and value from the 1943 output. The Creede district, Mineral County, continued to be the largest producer of silver and contributed 23 percent of the State total in 1944. Other principal silver-producing districts were: California (Leadville), Lake County, which produced 22 percent of the State output; Animas, San Juan County, 10 percent; Upper San Miguel, San Miguel County, 8 percent; Red Cliff, Eagle County, 6 percent; Roaring Fork, Pitkin County, 6 percent; Pioneer (Rico), Dolores County, 5 percent; Sneffels, Ouray County, 4 percent; and Griffith, Clear Creek County, 4 percent. Dry and siliceous ores yielded 53 percent of the State total silver; zinc-lead ore, 42 percent; lead ore, 4 percent; and copper and zinc ores and small placer mines, 1 percent.

The Golden Cycle mill at Colorado Springs operated throughout the year on company and custom ores from nearly all mining districts in the State; 221,543 tons of ore were treated in 1944 as compared with 287,939 tons in 1943. Of the total ore treated, 113,565 tons (226,908 tons in 1943) were company and custom gold-[silver]-sulfotelluride ores from the Cripple Creek district (Teller County) and 107,978 tons (61,031 tons in 1943) were miscellaneous zinc-lead and gold ores from Boulder, Chaffee, Clear Creek, Custer, Fremont, Gilpin, Gunnison, Lake, Park, Pitkin, Saguache, San Juan, and Summit Counties.

All the placer gold and silver produced in Colorado in 1944 was recovered by small-scale hand methods. Figures for the quantity of gravel handled at these operations during the year are not obtainable.

The total production of gold and silver in Colorado, in terms of recovered metals, from 1858 through 1944, has been 38,814,395 fine ounces of gold valued at $852,380,789, 48 percent of which was produced from mines in the Cripple Creek district of Teller County, and 725,959,747 fine ounces of silver valued at $564,176,595.

EASTERN AND APPALACHIAN STATES

As the wartime shut-down of the gold mines in the Eastern and Appalachian States continued throughout 1944, the only output of

gold and silver during the year was that recovered as a byproduct of the mining of other metals and the 5 ounces of gold recovered by individuals from placer gravel. The total mine output of gold was 2,595 fine ounces valued at $90,825, compared with 2,878 ounces valued at $100,730 in 1943, according to A. J. Martin of the United States Department of the Interior, Bureau of Mines. The silver production totaled 124,006 ounces valued at $88,182 in 1944, compared with 128,129 ounces valued at $91,114 in 1943. The estimated total output of gold in the Southern Appalachian States (Alabama, Georgia, Maryland, North Carolina, South Carolina, Tennessee, and Virginia) from 1799 to 1944 is recorded as 2,597,774 fine ounces valued at $55,386,929. Alabama, Maryland, and South Carolina had no gold production in 1944, and the combined output of the other four Southern Appalachian States was only 380 ounces. Three of these States (North Carolina, Tennessee, and Virginia) contributed to the output of silver in 1944; their total production was 66,361 ounces. In the Northern Appalachian region, Pennsylvania and Vermont together produced 2,215 ounces of gold and 32,407 ounces of silver, and New York produced 25,238 ounces of silver.

The Pennsylvania output was 2,115 ounces of gold and 13,545 ounces of silver in 1944, compared with 2,218 and 13,095 ounces, respectively, in 1943. These metals were recovered as byproducts from magnetite-pyrite-chalcopyrite ore from the Cornwall mine in Lebanon County. The ore is treated in a combined 6,500-ton magnetic concentration and 2,800-ton flotation mill. The flotation equipment treats tailings from the magnetic separators for the recovery of copper concentrates, which contain most of the gold and silver, and pyrite concentrates, which contain cobalt. The copper concentrates are shipped to the Phelps Dodge smelter and electrolytic refinery at Laurel Hill, N. Y., where gold and silver are recovered. The Vermont output of 100 ounces of gold and 18,862 ounces of silver in 1944 was also recovered from copper concentrates shipped to the Laurel Hill plant; the concentrates were derived from copper ore from the Elizabeth mine of the Vermont Copper Co. in Orange County and contained 21.60 percent copper and 0.015 ounce of gold and 2.50 ounces of silver to the ton. The New York silver production came from the Balmat mine of the St. Joseph Lead Co. in St. Lawrence County. The ore contains zinc, iron, and lead sulfides, and some silver is associated with the lead; it is treated by selective flotation, yielding zinc concentrates, pyrite concentrates, and lead concentrates. The recoverable silver is contained in the lead concentrates, which are shipped to the company smelter at Herculaneum, Mo.

In the Southern Appalachian States the lode gold and silver produced in 1944 were derived from copper, copper-iron, and zinc-lead ores. In Tennessee the blister copper made by the Tennessee Copper Co. smelter in treating copper concentrates produced in the company mills in the Ducktown district, Polk County, contains some gold and silver which are recovered as byproducts after the copper bullion is shipped to an electrolytic refinery on the Atlantic seaboard. The quantity recovered in 1944 was 222 ounces of gold and 45,907 ounces of silver. The Ducktown ore contains copper, iron, and zinc sulfides, and the mill products include iron and zinc concentrates as well as copper concentrates, but only the copper concentrates contain recoverable gold and silver. The Virginia output of gold and silver in

1944 comprised 132 ounces of gold and 18,031 ounces of silver from the Valzinco mine in Spotsylvania County (closed in January 1945), and 962 ounces of silver from the Toncrae copper mine in Floyd County. The Valzinco ore contains lead and zinc sulfides and a little copper, gold, and silver. Most of the recoverable gold and silver was contained in lead-zinc concentrates shipped to the Tooele (Utah) smelter and slag-fuming plant; the rest was recovered from zinc concentrates shipped to the Langeloth (Pa.) smelter, from which residues containing gold, silver, and copper were shipped to a copper smelter in New Jersey. The silver from the Toncrae mine was recovered from ore shipped crude to the Cartaret (N. J.) smelter. In North Carolina copper ore from the Fontana and Hazel Creek mines in Swain County, and the Bear Creek mine in Chatham County, yielded 21 ounces of gold and 1,461 ounces of silver. The ore from the Hazel Creek mine was concentrated in a small mill on the property and the concentrates were shipped to the Cartaret (N. J.) smelter. The Bear Creek ore was shipped to this smelter, and the Fontana ore was shipped to the Copperhill (Tenn.) smelter. The Georgia output in 1944 comprised 5 ounces of gold and less than one-half ounce of silver recovered by individuals from placer gravel in Dawson and Lumpkin Counties.

IDAHO

The total value of gold, silver, copper, lead, and zinc produced by Idaho mines was $42,591,137 in 1944 compared with $43,199,910 in 1943, a 1-percent decrease, according to G. E. Woodward and Paul Luff of the United States Department of the Interior, Bureau of Mines. The value of the gold output was $875,280 (2 percent of the State total), silver $7,062,481 (nearly 17 percent), copper $455,760 (1 percent), lead $13,364,800 (31 percent), and zinc $20,832,816 (49 percent). The quantity and value of each metal, except zinc, produced were less than in 1943. Compared with 1943 gold production decreased 19 percent, silver 15, copper 27, and lead 13; zinc production increased 5 percent.

The output of recoverable gold in Idaho was 25,008 fine ounces in 1944 compared with 30,808 fine ounces in 1943. This decrease resulted principally from a marked decline in output of gold from the Boise-Rochester-Monarch (Talache Mines, Inc.) property at Atlanta, which had been the largest producer of gold in Idaho since 1940. The yield of gold from lode mines decreased from 30,553 ounces in 1943 to 24,782 ounces in 1944 and that from placers from 255 to 136 ounces. In 1942 the yield of gold from lode mines was 50,440 ounces and that from placers 44,580 ounces. Nearly all of the gold properties in the State have been idle since the gold-mine closing order issued by the Government in October 1942. About 53 percent of the State total gold in 1944 came from siliceous gold ore, 43 percent from zinc-lead ore and old tailings, and nearly all the remainder from lead ore, copper ore, silver ore, and placers. In 1944 more than 79 percent of the State gold output came from three lode mines in the Yellow Pine, Warm Springs, and Middle Boise (Atlanta) districts.

The Bradley Mining Co., operating the Yellow Pine mine at Stibnite, was the largest gold producer in Idaho in 1944; it was followed in order by the Triumph mine near Ketchum and the Boise-Rochester-Monarch property at Atlanta.

The total production of gold, in terms of recoverable metals, from 1863 to 1944 inclusive, has been 7,779,994 ounces.

The output of recoverable silver in Idaho was 9,931,614 fine ounces in 1944—15 percent less than in 1943; but the State remained the largest producer of silver in the United States. The loss was attributed largely to suspension in March of the mining of silver-copper-antimony ore from the Sunshine vein by the Sunshine Mining Co.; however, a greater decrease was prevented through the large output of lead-silver ore made from the Chester vein and the Silver Syndicate fault zone near Kellogg by the Sunshine Mining Co. Large decreases in silver output occurred also at the Mineral Point, Hecla, Bunker Hill & Sullivan, Polaris, Morning, Triumph, Page, Tamarack, Yellow Pine, Gold Hunter, and Sherman properties. The Coeur d'Alene region produced 87 percent of the State total silver in 1944; the remainder came largely from the Warm Springs, Bayhorse, Yellow Pine, Deadwood Basin, Blue Wing, Clark Fork, and South Mountain districts. Of the State total silver, zinc-lead ore and old tailings yielded 43 percent, lead ore 32 percent, silver ore 22 percent, and gold ore, zinc ore, and zinc slag nearly all the remainder. The yield of silver from silver ore decreased 2,379,088 ounces and from zinc-lead ore 677,979 ounces, but that from lead ore increased 1,359,947 ounces, owing to the yield from the Chester vein and the Silver Syndicate fault zone.

Ten mines—the Sunshine, Polaris, Bunker Hill & Sullivan, Triumph, Osborn tailing plant, Page, Silver Dollar, Morning, Mineral Point, and Silver Syndicate—produced 76 percent of the silver output of the State in 1944. All these mines except the Triumph are in the Coeur d'Alene region.

The total production of silver, in terms of recoverable metals, from 1863 to 1944 inclusive, has been 505,851,641 ounces.

MONTANA

Copper ore remained the chief source of metal value in Montana in 1944; the value of the metals recovered from copper ore and its products was $35,998,281 or 73 percent of the State total, according to G. E. Woodward and Paul Luff of the United States Department of the Interior, Bureau of Mines. The total value of the gold, silver, copper, lead, and zinc produced from Montana ores and gravels was, in terms of recovered metals, $49,039,855 in 1944, compared with $53,642,658 in 1943. This 9-percent decrease resulted from a smaller output of each metal; however, the value of the zinc output was greater owing to the higher average price of the metal. The total value ($1,750,735) of the gold output declined 16 percent; silver ($5,044,064), 16 percent; copper ($31,911,300), 9 percent; and lead ($2,096,800), 14 percent. The value ($8,236,956) of the zinc output increased 1 percent. Silver Bow County, which yielded virtually all the copper output of the State and most of the silver, produced gold, silver, copper, lead, and zinc value at $38,877,303 compared with $42,100,656 in 1943. The decrease resulted from a smaller output of gold, silver, and copper, as the yield of lead and zinc was greater.

Montana ores and gravels yielded 50,021 fine ounces of gold in 1944, compared with 59,586 ounces in 1943—a 16-percent decrease; the output from lode mines decreased 1,716 ounces and from placer mines

7,849 ounces. Marked decreases in gold output at the Boaz mine and the Perry-Schroeder bucket dredge more than offset a substantial increase at the Jardine mine. War Production Board Limitation Order L–208 restricting production from gold mines remained in effect throughout 1944; however, grants for continuation of operation were extended to four producers in Montana in 1944. These mines justified their operation by reason of supplying a special product to the Government or smelters or because exhaustion of the mineral deposits was near completion. Siliceous ores (chiefly gold ore) yielded 51 percent of the State total gold, base-metal ores (mainly copper ore and zinc-lead ore) 36 percent, and placers 13 percent. Gold recovered from gold ore and base-metal ores was virtually the same as in 1943, but gold from siliceous silver ore declined 1,426 ounces. More than 85 percent of the State total gold came from properties in the Summit Valley (Butte), Sheepeater (Jardine), Whitehall, New World (Cooke City), Henderson, Flint Creek (Philipsburg), Missouri River, Marysville, and Norris districts. Gold ore mined totaled 97,928 tons, compared with 72,616 tons in 1943, and comprised 50,935 tons treated in amalgamation and cyanidation mills, 21,352 tons in concentrating mills, and 25,641 tons shipped crude to smelters. Ore treated at amalgamation and cyanidation mills (with or without concentrating equipment) yielded more than 14 percent of the State total gold; ore concentrated, 40 percent; and ore of all classes shipped crude to smelters, 33 percent. Two floating connected-bucket dredges were active in 1944; however, one of these—Perry-Schroeder 6-cubic foot (90-bucket) dredge on the Missouri River in Lewis and Clark County—ceased operations April 12, 1944, owing to exhaustion of profitable gravel. The other (H. & H. Mines 3½-cubic foot bucket dredge on Henderson Creek in Granite County) remained in operation through December and is still operating in 1945, because this dredge recovers tungsten in addition to gold.

The leading gold producers in Montana in 1944 were: All the company-operated copper mines, waste dumps, tailing dumps, and slime ponds of the Anaconda Copper Mining Co. at Butte and Anaconda; the Jardine mine at Jardine; the Golden Sunlight mine near Whitehall; the Estelle mine at Cooke City; the H. & H. Dredge near Hall; the Granite-Bimetallic tailing dump at Philipsburg; the Perry-Schroeder dredge near Helena; and the Boaz mine at Norris.

The total production of gold in Montana, in terms of recovered metal, from 1862 to 1944, inclusive, has been 16,937,017 fine ounces.

The output of recoverable silver in Montana was 7,093,215 fine ounces in 1944, compared with 8,450,370 ounces in 1943— a 16-percent decrease. The principal decreases were in the Summit Valley (Butte), Hog Heaven, Barker, Montana, Elkhorn, Colorado, and Heddleston districts. Ore treated at concentrating mills yielded 88 percent of the total silver and smelting ore 11 percent; the remainder came largely from slag fumed. Copper ore yielded 78 percent of the State total siver; zinc-lead ore 11 percent; siliceous ores 9 percent; and lead ore and zinc ore 2 percent. The output of silver from siliceous silver ore declined 692,950 ounces, that from copper ore 497,540 ounces, and from zinc-lead ore 195,983 ounces, and that from lead ore 15,598 ounces, but silver from zinc ore and slag increased 34,537 ounces.

Copper mines, mine dumps, tailing dumps, slime ponds, and zinc mines and the North Butte property (all at either Butte or Anaconda) and the Flathead mine (in Flathead County), all operated by the

Anaconda Copper Mining Co., produced 79 percent of the State total silver in 1944. Other large producers included the Emma mine at Butte (all byproduct silver), the Granite Bimetallic tailing dump at Philipsburg, and the Mike Horse mine near Flesher in Lewis and Clark County.

The total production of silver in Montana, in terms of recovered metal, from 1862 to 1944, inclusive, has been 739,934,613 fine ounces.

NEVADA

Nevada gold production (in terms of recovered metals) in 1944 decreased 18 percent and silver 22 percent in both quantity and value compared with 1943, according to Charles White Merrill, of the United States Department of the Interior, Bureau of Mines. Higher wages, enlistment of miners in the armed forces, migration of miners to war industries and military construction jobs, rising prices of supplies and equipment and the difficulties in obtaining them, increased taxes, and the fixed prices for gold and silver were all factors in reducing Nevada's precious metal production. In addition the enforcement through 1944 of War Production Board Order L–208, which had been promulgated October 8, 1942, resulted in many gold mines being inactive. Gold and silver production would have fallen even lower had it not been for substantial outputs of the precious metals as byproducts from base metal mines stimulated by war demands. In 1943 for the first time in the history of the State, more gold was derived from base metal ores than from dry ores and this condition continued in 1944.

The output of gold from Nevada ores, re-treated tailings, and gravels in 1944 was 119,056 fine ounces valued at $4,166,960 compared with 144,442 ounces valued at $5,055,470 in 1943. This output was the lowest in both quantity and value since 1933. Production of silver in 1944 was 1,259,636 fine ounces valued at $895,741 compared with 1,620,280 ounces valued at $1,152,199 in 1943. Thus silver output also was the lowest in quantity and value since 1933.

Gold was recovered from the following sources: Copper ore, 46 percent; dry gold ore, 42 percent; placer gravel, 6 percent; zinc ore, 3 percent; dry gold-silver ore, 2 percent; and other ores 1 percent. Metallurgical data show that 52 percent of the State lode gold was recovered by the smelting of concentrates, 42 percent by cyaniding of ore and old tailings, 5 percent by the direct smelting of ore and old tailings, and 1 percent by amalgamation of ore and old tailings. Smelting of concentrates, direct smelting of ore and old tailings, and amalgamation of ore and old tailings as gold recovery methods were less important in 1944 than in 1943 but the proportion of gold recovered by cyanidation of ore and old tailings increased.

The principal Nevada gold mines in 1944 listed by operating companies and in order of output were Getchell Mine, Inc., Humboldt County (gold ore); Kennecott Copper Corporation (Nevada Mines Division), White Pine County (copper ore); Consolidated Coppermines Corporation, White Pine County (copper ore); Willow Creek Mines, Inc., Lander County (gold ore); Manhattan Gold Dredging Co., Nye County (connected-bucket dredge); International Smelting & Refining Co., Lander County (copper ore and old tailings); Combined Metals Reduction Co., Lincoln County (zinc ore); and Consolidated Chollar Gould & Savage Mining Co., Storey County (gold ore).

Nevada lode silver was recovered from the following sources in 1944: Zinc ore, 30 percent; copper ore, 28 percent; lead ore, 13 percent; dry gold-silver ore, 11 percent; zinc-lead ore, 10 percent; dry silver ore, 6 percent; and dry gold ore, 2 percent. Placer gravels washed primarily for gold, yielded a small quantity of silver. Smelting of concentrates accounted for 56 percent of the lode silver produced in Nevada in 1944; 40 percent was recovered by direct smelting of ore and old tailings and almost 4 percent by cyanidation of ore and old tailings; a very small quantity of silver was recovered by amalgamation of ore and old tailings.

The principal silver mines in Nevada in 1944 listed by operating companies and in order of output were: Combined Metals Reduction Co., Lincoln County (zinc ore); Kennecott Copper Corporation (Nevada Mines Division) White Pine County (copper ore); International Smelting and Refining Co., Lander County (copper ore and old tailings); lessees of the Tonopah Mining Co. of Nevada, Nye County (gold-silver ore); Bristol Silver Mines Co., Lincoln County (copper ore and zinc-lead ore); Prince Consolidated Mining Co., Lincoln County (zinc ore); Consolidated Coppermines Corporation, White Pine County (copper ore); and Salt Lake-Pioche Mining Co. (Financier mine) Lincoln County (lead ore).

NEW MEXICO

Mines in New Mexico yielded (in terms of recovered metal) 6,918 fine ounces of gold valued at $242,130 in 1944, according to Richard H. Mote, of the United States Department of the Interior, Bureau of Mines. Except for 1943, the production of gold in New Mexico was the lowest since 1880. The principal gold-producing districts in 1944 were: Central, Grant County, which produced 34 percent of the State output of recovered gold; Lordsburg, Hidalgo County, 33 percent; Mogollon, Catron County, 15 percent; Willow Creek (Terrero), San Miguel County, 8 percent; Steeple Rock, Grant County, 4 percent; Pinos Altos, Grant County, 3 percent; and Magdalena, Socorro County, 2 percent.

Copper ore yielded 37 percent of the State total gold; zinc-lead ore, 33 percent; dry and siliceous ores, 21 percent; and lead and zinc ores, 9 percent.

The mine production of recovered silver in New Mexico in 1944 was 535,275 fine ounces valued at $380,640. The Central district contributed 40 percent of the State total in 1944; Lordsburg, 21 percent; Magdalena, 12 percent; Mogollon, 11 percent; Steeple Rock, 4 percent; Pinos Altos, 3 percent; Willow Creek (Terrero), 2 percent; Kingston, 2 percent; and Swartz, 2 percent.

Zinc-lead ore yielded nearly 63 percent of the total silver; copper ore, nearly 22 percent; dry and siliceous ores, 12 percent; and lead and zinc ores, 4 percent.

The total production of gold and silver in New Mexico, in terms of recovered metals, from 1848 through 1944, has been 2,173,222 fine ounces of gold valued at $49,396,963 and 66,931,604 fine ounces of silver valued at $52,341,337.

OREGON

Gold production in Oregon in 1944, although 25 percent above the 1943 output, was less than 2 percent of the all-time record set just 4

years earlier (in 1940) according to Charles White Merrill, of the United States Department of the Interior, Bureau of Mines. The production of gold from Oregon ores, gravels, and re-treated tailings in 1944 was 1,369 fine ounces valued at $47,915 compared with 1,097 ounces valued at $38,395 in 1943. The leading Oregon gold producer in 1944 reported an output valued at less than $8,000. Lode mines produced 79 percent of the gold and placers 21 percent thus reversing a condition of many years standing, before 1943, in which placers had been the principal source of gold. All of Oregon's lode gold was recovered from dry and siliceous ore and old tailings most of which was valued principally for gold. Metallurgical data show that 65 percent of Oregon lode gold was recovered by direct smelting of ore, 20 percent as bullion by cyanidation of ore and old tailings, 12 percent as bullion by amalgamation of ore, and 3 percent by smelting of flotation concentrates. Placer mining in Oregon in 1944 was confined to small-scale hand methods which accounted for 42 percent of the placer gold and hydraulicking 34 percent; terminal clean-ups at inactive nonfloating washing plants supplied 24 percent.

Oregon ores, gravels and re-treated tailings in 1944 yielded 20,243 fine ounces of silver, valued at $14,395, compared with 10,523 ounces, valued at $7,483 in 1943; the increase was 92 percent in both quantity and value but silver output remained at less than a tenth of the 1940–41 level. Jefferson County supplied over 80 percent of the State total, dry gold-silver ore was the principal source, and smelting of ore the principal method of recovery. The Oregon King mine, Ashwood district, Jefferson County was the principal source of silver in the State in 1944 as in 1943 and 1942.

SOUTH DAKOTA

South Dakota gold production in 1944 fell below that in any year since 1875—the year gold was discovered in the gravels of French Creek near the present site of Custer, according to Richard H. Mote, of the United States Department of the Interior, Bureau of Mines. Silver production was the lowest since 1876. In 1944 the State yielded (in terms of recovered metals) 11,621 fine ounces of gold, valued at $406,735, and 5,445 fine ounces of silver, valued at $3,872. Most of the gold produced during 1944 came from a thorough clean-up of equipment in connection with regular maintenance at the Homestake mill.

Compared with 1943, the output of gold decreased 89 percent and the production of silver decreased 85 percent in both quantity and value. No placer gold was produced in 1944.

Operations at the Homestake mine, owned and operated by the Homestake Mining Co. since 1877, consisted only of maintaining mine and mill property in adequate stand-by condition. This was the first full year since production began on July 12, 1878, in which no ore was mined or milled.

The Belle Eldridge Gold Mines, Inc., operated its group of claims and 50-ton selective-flotation mill in the Whitewood district of Lawrence County during the first half of 1944, and recovered gold and silver as a byproduct of base-metal mining.

The total production of gold and silver, in terms of recovered metals, in South Dakota from 1876 through 1944, has been 20,678,106 fine

ounces of gold, valued at $505,330,919, and 9,574,544 fine ounces of silver valued at $6,810,952.

TEXAS

Texas mines produced (in terms of recovered metal) 5,355 fine ounces of silver, valued at $3,808, in 1944, according to Richard H. Mote, of the United States Department of the Interior, Bureau of Mines. Compared with 1943, the output of silver decreased 48 percent in both quantity and value. No gold was recovered from ores mined in Texas in 1944. The Hazel mine in Culberson County yielded over half the silver produced in Texas in 1944. The total production of gold and silver, in terms of recovered metals, from 1885 through 1944, has been 8,281 fine ounces of gold, valued at $223,780, and 33,202,176 fine ounces of silver, valued at $23,363,836. Most of the silver (30,293,606 ounces) came from the Presidio mine at Shafter, Presidio County. This property ceased operations in September 1942; soon afterward all equipment at the property was dismantled and sold.

UTAH

Utah mines produced gold, silver, copper, lead, and zinc valued, in terms of recoverable metals, at $111,036,247 in 1944, an 11-percent decrease from $124,562,540 in 1943, according to G. E. Woodward and Paul Luff of the United States Department of the Interior, Bureau of Mines. Utah remained the largest gold-producing State and was second in copper production. A smaller output of each of the five metals resulted in the decrease in total value, although the average prices paid for copper, lead, and zinc were higher than in 1943. Declines were general throughout the State with the exception of zinc output from the Tintic district and the gold production in Tooele County. The value of metal output in the Bingham district declined $10,513,226 (10 percent) compared with 1943, the Park City region $1,436,510 (20 percent), and the Tintic district $911,142 (24 percent). The Utah Copper Co. continued to account for a major part of the value of Utah metal production and in 1944 contributed 77 percent of the total.

Utah was again the largest gold-producing State; however, the output was 344,223 fine ounces, a 12-percent decline from 390,470 ounces in 1943. Gold produced in Utah is derived principally from base metal ores; in 1944 copper, zinc-lead, lead, zinc-lead-copper, and zinc ores furnished 94 percent of the total and siliceous ores the remainder. No gold was recovered from placer operations in 1944. Mines in the Bingham district, by far the most important gold-producing area in the United States now active, produced 312,493 ounces of gold, a decrease of 31,058 ounces compared with 1943. The loss in the district can be attributed to a smaller output from each of the major gold-producing mines in the district except the National Tunnel & Mines Co. operation; however, the gain from this operation was small. These losses in gold output resulted from a smaller tonnage of ore from each producing mine, as the gold content of the ore mined in 1944 remained substantially the same as in 1943.

The Park City region was the second most important gold-producing area in the State in 1944 and produced 15,149 ounces compared with 19,559 in 1943. Most of the decrease was due to a decline at the New

Park Mining Co. operations. The tonnage of ore mined was not only smaller than in 1943, but the emphasis was on zinc-lead ore at the expense of high-grade gold ores at the company's disposal. The Tintic district, source of most of the siliceous gold ore in normal times, produced 11,417 ounces in 1944, a decline of 11,053 ounces from 1943. Mines in Tooele County showed a slight increase in gold output. Most of the siliceous ore produced in the State was used as reverberatory and converter flux. Gold production from the Utah Copper Co. was considerably less than in 1943; nevertheless, the company was the leading producer in the State. It was followed by the United States & Lark mines at Bingham, the Mayflower mine at Keetley, the Tintic Bullion mine in the Tintic district, the Boston Consolidated property at Bingham, the Butterfield group of properties in the Bingham district, the National Tunnel & Mines Co. properties in the Bingham district, and the Geyser Marion property in the Camp Floyd district. These eight properties produced 96 percent of the State gold output in 1944.

The total production of gold in Utah, in terms of recovered metal, from 1864 to 1944, inclusive, has been 10,184,466 fine ounces.

The output of recoverable silver in Utah in 1944 was 7,593,075 fine ounces compared with 9,479,340 ounces in 1943, a 20-percent decrease. The Bingham district remained the leading silver-producing area in the State and supplied 62 percent of the State output. However, the district production was 14 percent less than in 1943, owing chiefly to much smaller outputs from the Utah Copper Co. and the United States & Lark property. A 29-percent decline was noted in the output from mines in the Park City region, the second leading silver-producing area in the State. Although the Park Utah Consolidated Mining Co. operations showed a net gain in silver production, it was more than offset by substantial losses at the Silver King Coalition Mines Co. and the New Park Mining Co. properties. A decrease of 339,548 ounces at the Tintic Standard mine was the chief reason for the 31-percent decline in silver output from the Tintic district. Zinc-lead, zinc-lead-copper, zinc, and lead ores yielded 53 percent of the State silver, copper ore 34 percent, and siliceous ores the remainder. The Utah Copper Co. was again the leading silver producer in Utah and was followed by the United States & Lark, Park Utah Consolidated, Silver King Coalition, Mayflower, Tintic Standard, Chief No. 1, West Calumet, Harold dump, and Godiva mines. These 10 properties contributed 90 percent of the State total output of silver.

The total production of silver in Utah, in terms of recovered metal, from 1864 to 1944, inclusive, has been 708,947,521 fine ounces.

WASHINGTON

Mines in Washington yielded gold, silver, copper, lead, and zinc valued, in terms of recoverable metals, at $7,195,136 in 1944 compared with $7,838,012 in 1943 according to G. E. Woodward and Paul Luff of the United States Department of the Interior, Bureau of Mines. The average prices paid for copper, lead, and zinc were higher than in 1943, which tended to maintain total value of metal output near the 1943 level despite a decline in output of each metal except lead; however, the total value was the lowest since the United States entered the present war. The output of lead exceeded that in

any other year. The decrease in the gold and silver resulted from a decline in production from the two leading gold and silver producers in the State—the Howe Sound Co., operating the Holden property in Chelan County, and Knob Hill Mines, Inc., operating its gold property in Ferry County. The Holden property was again the principal source of copper and although the company treated a larger tonnage of ore in 1944 than in 1943 the gold, silver, copper, lead, and zinc content was less. The decreased production of zinc and the increased production of lead in Washington were the net result of treating a smaller tonnage of zinc-lead ore from the mines in Pend Oreille County having a lower zinc but a higher lead content than in 1943. The Pend Oreille Mines & Metals Co. was the principal zinc producer in the State, and the American Zinc, Lead & Smelting Co. was the largest lead producer.

The output of recoverable gold from lode and placer operations in Washington in 1944 was 47,277 fine ounces, a 28-percent decrease from 1943. Only two mines producing gold in substantial quantities from siliceous ores remained active in 1944; all others were closed. The decrease in output of gold in the State was the result of marked declines in output at its two largest gold producers, namely, the Howe Sound Co. and Knob Hill Mines, Inc. The greater decrease was noted at the Holden property of the Howe Sound Co., where a larger tonnage of ore was mined and treated than in 1943, but of a much lower gold content; most of the ore was mined from ore bodies low in gold content while the new extraction shaft below the main haulage tunnel was being completed. Although the Knob Hill Mines, Inc., treated ore with a slightly higher gold content, the tonnage treated in 1944 was sufficiently smaller than that treated in 1943 to show a net decrease in gold output. Ores of the Holden mine, valued also for their copper and zinc content, continued to be the chief source of gold in the State and in 1944 yielded 55 percent of the State total; it was followed by Knob Hill Mines, Inc., which treated gold throughout the year from its Knob Hill mine by cyanidation and concentration. These two properties, long producing most of the State output of gold, contributed over 94 percent of the total in 1944. Among other gold-producing properties were the Aurum mine in the Republic district of Ferry County and the Blue Ridge property of the Sierra Zinc Co. in the Northport district of Stevens County.

The total output of siliceous ore was 62,063 tons, principally gold ore, compared with 61,220 tons virtually all gold ore in 1943; it was treated as follows: 42,245 tons by combination cyanidation and concentration, 200 tons by straight concentration, and 19,618 tons shipped crude to smelters. Placers yielded 59 ounces of gold.

The total production of gold, in terms of recoverable metals, from 1860 to 1944 inclusive has been 2,069,642 ounces.

The output of recoverable silver in Washington was 321,608 fine ounces in 1944, compared with 370,440 ounces in 1943; all the silver recovered was byproduct of gold or base metals. Losses in output from mines in Benton, Chelan, Ferry, Snohomish, and Whatcom Counties more than offset gains from mines in Okanogan, Pend Oreille, and Stevens Counties. Virtually the entire State output of silver came from mines in Chelan, Ferry, Okanogan, Pend Oreille, and Stevens Counties. Mines in Chelan and Ferry Counties, for years the chief source of silver, yielded 73 percent of the State total

in 1944. Gold ore yielded 40 percent of the total State silver; zinc-copper ore, 32 percent; zinc-lead and zinc ores, 26 percent; and gold-silver, silver, copper, and lead ores and placers, the remainder. The Knob Hill mine of Knob Hill Mines, Inc., in Ferry County was again the largest silver producer in the State; it was followed by the Holden property of the Howe Sound Co. in Chelan County, the Kaaba property of the Kaaba-Texas Mining Co. in Okanogan County, and the Aurum group of properties in Ferry County; these four properties contributed 88 percent of the State total silver. Placers yielded 7 ounces of silver.

The total production of silver in Washington, in terms of recoverable metals, from 1860 to 1944 inclusive has been 12,283,976 ounces.

WYOMING

The output of recovered gold in Wyoming in 1944 was 20 fine ounces, valued at $700, according to Richard H. Mote, of the United States Department of the Interior, Bureau of Mines. The output of silver during the year was 3 fine ounces, value at $2.

The entire 1944 production of gold and silver came from the Midas mine in the Atlantic City district, Fremont County. The total production of gold and silver in Wyoming, in terms of recovered metals, from 1867 through 1944 has been 77,934 fine ounces of gold valued at $1,836,018, and 74,635 fine ounces of silver valued at $51,754.

Distribution of gold and silver production of the United States, in fine ounces, for 1944, as to sources of production (table furnished by the Bureau of Mines)

State	Gold			Silver

[1] Contains small quantity of silver from placer mines (12,878 fine ounces).
[2] Includes silver in lead, lead-copper, zinc, zinc-lead, zinc-copper, and zinc-lead-copper ores.
[3] Includes silver from galena concentrates, a byproduct of fluorspar mining.
[4] From copper concentrates from magnetite-pyrite-chalcopyrite ore.

Refinery production (arrivals thereat) of gold mined in the several States and Territories in 1943 and 1944, with percentage increase (+) or decrease (−) based on ounces, for the latter year (table compiled by Mint)

[1] Valued at $0.7111+ per fine ounce, the price established for newly mined domestic silver by act of July 6, 1939.
[2] For States not showing percentage change, figures too small for comparison.

*Total production of gold and silver in the United States since 1792 (including the Philippine Islands received in United States)**

[The estimate for 1792–1873 is by R. W. Raymond, Commissioner of Mining Statistics, and since by Director of the Mint]

Period	Gold		Silver	
	Fine ounces	Value [1]	Fine ounces	Commercial value [2]
1792–1873	61, 208, 448	$1, 265, 287, 000	146, 528, 100	$194, 036, 000
1874–1944	212, 375, 295	5, 030, 675, 100	3, 715, 423, 319	2, 773, 765, 466
Grand total	273, 583, 743	6, 295, 962, 100	3, 861, 951, 419	2, 967, 801, 466

*For data by calendar years, see *Annual Report of the Director of the Mint For the Fiscal Year Ended June 30, 1944*, page 36.

[1] Gold valued at $20.67+ per ounce through 1933 and at $35.00 per ounce thereafter.

[2] Silver since 1933 valued at the following amounts per ounce: 1934—$0.64+; 1935—$0.71875; 1936—$0.7745; 1937—$0.7735; 1938—$0.6464+; 1939—$0.6787; and thereafter at $0.7111+ per ounce.

Mint Issue of Fine Gold Bars for Arts and Industry Calendar Year 1944

The value of fine gold bars issued in exchange for cash by the United States Mints at Philadelphia, San Francisco and Denver, and the Assay Office at New York for use in arts and industry, totaled $41,589,832.68 during the calendar year 1944. Monthly issues were as follows:

Month	Value of bars issued	Month	Value of bars issued
January	$1, 896, 452. 83	August	$3, 029, 877. 65
February	2, 901, 455. 72	September	3, 927, 354. 91
March	2, 597, 217. 74	October	5, 682, 976. 99
April	2, 469, 142. 47	November	5, 596, 248. 64
May	3, 520, 206. 50	December	4, 650, 029. 86
June	3, 670, 509. 21		
July	1, 648, 360. 16	Total	41, 589, 832. 68

Total gold and silver issued for use in industry and the arts in the United States during the calendar years 1943 (revised) and 1944 [1]

Gold	1943	1944
	Value	*Value*
Sales by mints and assay offices	$17, 592, 973	$41, 589, 833
Sales by private refiners and dealers	79, 361, 380	94, 629, 080
Total	96, 864, 353	136, 218, 913
Old jewelry, plate, scrap, etc. returned to private refiners and dealers and to monetary use	10, 521, 000	25, 678, 940
Net new material used in industry	86, 343, 353	110, 539, 973
Silver	**1943 (revised)**	**1944**
	Fine ounces	*Fine ounces*
Bar payment in exchange for bullion at mints and assay offices	382, 849	154, 196
Bar sales under Green Act by mints and assay offices	20, 769, 802	[2] 38, 287, 082
Silver in various forms issued by private refiners and dealers [3]	140, 882, 868	137, 770, 787
United States silver coin (estimated)	77, 344	77, 344
Total	162, 112, 863	176, 289, 409
Old jewelry, plate, scrap, etc. returned to private refiners and dealers and to monetary use	44, 112, 863	56, 189, 409
Net new material used in industry	118, 000, 000	120, 100, 000

[1] For statistics from 1880–1942, see *Annual Report* for 1944, pages 38–39.

[2] Additional silver sold under the Green Act for Philippine coinage.

[3] Excludes any Green Act silver which was reissued or handled on toll or similar basis by private refiners or dealers.

ADDENDA TO REPORT OF THE DIRECTOR OF THE MINT

ADDENDA TO REPORT OF THE DIRECTOR OF THE MINT

Bases Used for Mint Service Statistics

Gold and silver, as well as minor coinage metals, are accounted for by quantity as well as by value. Most of the published mint service statistics pertaining to such metals are on a primary quantity basis rather than a primary value basis because, in some degree, the value factor antedates the quantity factor, as when advance partial payments are made on large deposits of bullion or foreign coin pending determination by melt, assay, and computation, of the exact quantities and values of the materials deposited. The *quantity basis* comprises received bullion, the quantity and value whereof have been finally determined, whether or not paid for; also melted coin that has been reviewed and classified after having been received as withdrawn from monetary use. The *value basis* comprises received bullion, the quantity and value whereof have been finally determined, whether or not paid for; also received bullion to the value of advance payments thereon prior to making final determinations; and received but unreviewed coin that has been withdrawn from monetary use. To effect reconciliation between the quantity basis and value basis, from period to period, would require consideration also of prior period advances.

The tabulations of "Deposits and purchases" include received metal for which payment is made in bars bearing the Government stamp, as well as that paid for by check or in cash. In these tabulations, prior to the fiscal year 1940, the receipt classification item of "Domestic refinery bullion" included that refined from new production of both domestic and foreign mines, also old or secondary source metals, with inconsiderable amounts from small refineries that worked only old materials. Beginning with the fiscal year 1940 segregation of these items has been made in the tabulations.

Gold and silver production estimates.—These estimates consist of arrivals at United States mints and assay offices and at privately owned refineries (bullion-producing plants), of gold and silver from mines within the States and Territories of the United States, including the production of the Philippine Islands which comes to the United States for reduction. The portion of this figure representing mint receipts is on the quantity basis.

Gold and silver consumption in industry.—These estimates comprise bar sales by the mints and assay offices for industrial use (partly estimated) plus similar items issued by private refiners, dealers (and manufacturers), as reported to the Mint Bureau, plus an estimate of domestic coin melted for industrial use; from the total of these is deducted the old jewelry, plate, scrap, etc., received by the same concerns, giving net new materials consumed.

Stock of domestic coin.—Consists of an estimate made in 1873 of gold and silver coin, the former of which was revised in 1907, with annual addition of new coinage and reported imports, and deduction of withdrawn coin, reported exports, and an estimate for industrial use; from 1928 to 1933 the additional factor of gold coin "earmarked,"

or set aside for foreign owners, was considered, such transactions being equivalent to exports and releases thereof being equivalent to imports. After 1933 gold coin has been omitted as such; any unmelted gold coin on hand is treated as bullion. In 1928 minor coin was added, considering only coins of the type commonly in circulation, the amounts coined, and those withdrawn for recoinage. The monetary stock tables for a series of years have been revised back to the establishing of the Federal Reserve System (1914) to include earmarked gold, and to include minor coin back to 1900. The item of coin withdrawn as used in the stock compilation omits the coin received for recoinage but not yet reviewed, which coin is subject to classification adjustments.

Domestic coin made.—These data cover the coin delivered from the manufacturing department to the issuing (cash) division, and include the new coin made from withdrawn old coin, as well as all other newly made coin. It is now required that all coins be delivered to the cash division during the year impressed on such coins; during the earlier years this was not always done.

Number of gold and silver deposit transactions and assay determinations during the fiscal year 1945

Item	Philadelphia	San Francisco	Denver	New York	Seattle	Total
Deposit transactions:						
Purchases	1,360	1,432	486	2,733	377	6,430
Transfers	116	1				117
Inter mint transfers	104		9	5		118
Trust deposits	6					6
Redeposits [1]				20		20

[1] For deposits by separate fiscal years 1873–1944, see Annual Report for 1944, page 52.

[2] Gold on quantity basis with value calculated at $20.67+ per fine ounce until 1934 and at $35 thereafter.

[3] Includes gold and silver domestic refinery product from foreign ores, etc., prior to fiscal year 1940. Also silver for 1934–36 includes refined bars (of whatever production source) received under Executive Proclamation of Aug. 9, 1934 (nationalized silver).

[4] Includes unfit silver dollars melted under authority of act of Dec. 18, 1942, beginning April 1943.

[5] Silver: Foreign bullion 1934–42 includes imported bars (whether of foreign bullion or of domestic bullion previously exported) acquired under the Silver Purchase Act of June 19, 1934.

[1] Ratios for 1687–1836 appear in Annual Report for 1944, p. 91.
From 1837 to 1878 the ratios are from Pixley and Abell's tables, from 1879 to 1896 from daily cabled prices from London to the Bureau of the Mint, from 1897 to 1914 from daily London quotations, and since from daily New York quotations.

Price of silver in London and in New York, 1944–45 [1]

[1] For annual price of bar silver in London 1833–1943, see Annual Report for 1944, p. 88.

WORLD MONETARY STATISTICS

The statistics of foreign countries on production and coinage of gold and silver and stocks of money, published annually in the reports of the Bureau of the Mint, are obtained, so far as practicable, directly from the governments of such countries by the representatives of the United States accredited to them.

Interrogatories covering the points on which information is sought are sent yearly to the United States Ambassadors and Ministers through the Department of State, and the replies in the form of reports are forwarded directly to the Bureau of the Mint.

Receipts of replies to the interrogatories are frequently delayed in transmission, and the available data for the calendar year under review are often incomplete. In a general way interrogatory answers are herein published as received, with the addition of equivalents. If inaccuracies are apparent, information that would warrant the making of possible corrections is often unavailable.

In the absence of dependable official returns from foreign countries the most reliable data available are used in compiling world statistics.

A number of countries are omitted from the tables because of complete lack of information.

In connection with the table "*Monetary stock of principal countries of the world, end of calendar year 1944*"—the following qualifications should be taken in consideration:

Gold stocks—It is understood that material amounts of gold are not reported by several countries, such as amounts held in secret funds for stabilizing currencies, and those hoarded or held outside regularly reported stocks. Figures for certain countries have been carried forward from last previous official report.

Silver stocks—The amount of silver in circulation in many countries is not obtainable.

Population estimates, not currently obtainable for 1944 due to wartime population shifts, and other reasons, are the latest available, but do not all relate to the same period.

Totals for the various stocks of money are omitted because of incomplete data for some countries, and complete lack of data for others.

MONETARY STOCK OF PRINCIPAL COUNTRIES OF THE WORLD AT END OF CALENDAR YEAR 1944 (SUBJECT TO REVISION)

[Stated in United States money (000 omitted), except paper circulation which is stated in monetary unit of issuing country (000 omitted). Population, 000 omitted. 1 U. S. dollar = 15 5/21 grains of gold 9/10 fine; that is, an ounce of fine gold = $35]

Country	Monetary unit			Gold stock—conversions to United States equivalent at legal parity, except as otherwise indicated in notes			Monetary silver stock in government treasuries, banks, and in circulation—United States equivalent of reported face amount at current exchange rate	Notes in circulation in monetary unit of issuing country	Population	Per capita

*Revised figures.

[1] The money in circulation includes any paper currency held outside the continental limits of the United States.

[3] Does not include gold other than that held by the Treasury.

[3] Includes $1,800,000,000 Exchange Stabilization Fund and $143,941,362 balance of increment resulting from reduction in weight of the gold dollar.

[4] These amounts are not included in the total, since the gold or silver held as security against gold and silver certificates and Treasury notes of 1890 is included under gold, standard silver dollars, and silver bullion, respectively.

[5] This total includes credits with the Treasurer of the United States payable in gold certificates in (1) the Gold Certificate Fund-Board of Governors, Federal Reserve System, in the amount of $15,034,921,121 and (2) the redemption fund for Federal Reserve notes in the amount of $594,106,209.

[6] Includes $115,000,000 lawful money deposited as a reserve for Postal Savings deposits.

[7] The amount of gold and silver certificates and Treasury notes of 1890 should be deducted from this amount before combining with total money held in the Treasury to arrive at the total amount of money in the United States.

UNITED STATES MONEY—DEC. 31, 1944

Money held in the Treasury—Con.		Money outside of the Treasury				Population of continental United States (estimated)
Held for Federal Reserve banks and agents	All other money	Total	Held by Federal Reserve banks and agents	In circulation [1]

	90,817,762	816,266,721		816,266,721	16.92	48,231,000

NOTE.—There is maintained in the Treasury—(i) as a reserve for United States notes and Treasury notes of 1890—$156,039,431 in gold bullion; (ii) as security for Treasury notes of 1890—an equal dollar amount in standard silver dollars (these notes are being canceled and retired on receipt); (iii) as security for outstanding silver certificates—silver in bullion and standard silver dollars of a monetary value equal to the face amount of such silver certificates; and (iv) as security for gold certificates—gold bullion of a value at the legal standard equal to the face amount of such gold certificates. Federal Reserve notes are obligations of the United States and a first lien on all the assets of the issuing Federal Reserve Bank. Federal Reserve notes are secured by the deposit with Federal Reserve agents of a like amount of gold certificates or of gold certificates and such discounted or purchased paper as is eligible under the terms of the Federal Reserve Act, or, until June 30, 1945, of direct obligations of the United States if so authorized by a majority vote of the Board of Governors of the Federal Reserve System. Federal Reserve banks must maintain a reserve in gold certificates of at least 40 percent, including the redemption fund which must be deposited with the Treasurer of the United States, against Federal Reserve notes in actual circulation. "Gold certificates" as herein used includes credits with the Treasurer of the United States payable in gold certificates. Federal Reserve bank notes and National bank notes are in process of retirement.

ANNUAL REPORT OF THE DIRECTOR OF THE MINT

TREASURY DEPARTMENT,
BUREAU OF THE MINT,
Washington, D. C., September 26, 1947.

SIR: In compliance with the provisions of Section 3547 of the Revised Statutes of the United States, I have the honor to submit herewith a report covering the operations of the mints, assay offices, and bullion depositories of the United States for the fiscal year ended June 30, 1947, being the Seventy-fifth Annual Report of the Director of the Mint. There is also submitted for publication in connection therewith the annual report of this Bureau upon the production and consumption of the precious metals in the United States for the calendar year 1946.

OPERATIONS OF THE MINTS, ASSAY OFFICES, AND BULLION DEPOSITORIES

Functions and Institutions of the Mint Service

The principal functions of the Mint Service consist of the manufacture of domestic coins; the safeguarding of the Government's holdings of the monetary metals, including coins in processing stages until finished and issued; and the acquisition of gold and silver bullion, payments for which are made on the basis of mint assays. Other major activities include the refining of gold and silver, the manufacture of coins for foreign governments, the issuance of Treasury licenses for the acquisition, ownership, possession, and use of gold for industrial, professional, and artistic purposes, and the production of medals and other decorations.

Seven field institutions were in operation during the fiscal year 1947: Coinage mints at Philadelphia, San Francisco, and Denver; assay offices at New York and Seattle; gold bullion depository at Fort Knox; and silver bullion depository at West Point, which operates as an adjunct of the New York Assay Office. The Office of the Director of the Mint in Washington administers all Mint Service activities. At the close of the fiscal year 1947 there was a total of 1,783 employees in the Mint Service, compared with 2,547 employees a year ago.

Coinage

Coinage production by the three mints during the fiscal year 1947 totaled 2,350,571,022 pieces, of which 2,016,485,295 pieces were United States coin and 334,085,727 were foreign.

United States coinage.—Production of United States coins during the fiscal year 1947 increased 22 percent over the 1946 production of 1,658,127,100 pieces. A table follows:

United States coinage during the fiscal year 1947

Denomination	Philadelphia	San Francisco	Denver	Total value	Total pieces
SILVER					
Half dollars, regular	$6,183,000.00		$2,563,850.00	$8,746,850.00	17,493,700
Half dollars, commemorative:					
Iowa centennial	50,028.50			50,028.50	100,057
Booker T. Washington	500,273.00	$250,139.50	100,056.50	850,469.00	1,700,938
Quarter dollars	10,013,000.00	1,051,000.00	2,078,100.00	13,142,100.00	52,568,400
Dimes	22,545,000.00	1,607,000.00	5,794,700.00	29,946,700.00	299,467,000
Total silver	39,291,301.50	2,908,139.50	10,536,706.50	52,736,147.50	371,330,095
MINOR					
5-cent pieces	6,113,600.00	1,113,000.00	2,621,910.00	9,848,510.00	196,970,200
1-cent pieces [1]	8,495,000.00	2,323,000.00	3,663,850.00	14,481,850.00	1,448,185,000
Total minor	14,608,600.00	3,436,000.00	6,285,760.00	24,330,360.00	1,645,155,200
Total domestic coinage	53,899,901.50	6,344,139.50	16,822,466.50	77,066,507.50	2,016,485,295

[1] Includes 1,066,780,000 pieces with a composition of 95 percent copper and 5 percent zinc coined July-December 1946, and 381,405,000 pieces with a composition of 95 percent copper and 5 percent zinc and tin coined January-June 1947.

Foreign coinage.—The mints manufactured 334,085,727 coins for other governments during the fiscal year 1947. There were approximately 1,600 tons of metals, including gold, silver, copper, nickel, tin, and zinc, processed into coin for the governments listed below:

Coinage by the United States Mints for other countries during the fiscal year 1947 [1]

Country and denomination	Composition	Gross weight per coin	Number of pieces coined
Colombia:			
5 centavos	25 nickel-75 copper	4 grams	24,777,000
Cuba:			
5 centavos	70 copper-30 zinc	77.16 grains	27,291,000
1 centavo	do	38.58 grains	22,826,000
			50,117,000
Dominican Republic:			
50 centavos	900 silver-100 copper	192.9 grains	200,000
25 centavos	do	96.45 grains	400,000
			600,000
Ecuador:			
1 sucre	Pure nickel	7 grams	4,179,000
20 centavos	25 nickel-75 copper	4 grams	30,000,000
10 centavos	do	3 grams	40,000,000
5 centavos	do	2 grams	40,000,000
			114,179,000
Ethiopia:			
50 cents	700 silver-300 copper	108.5 grains	6,306,363
5 cents	95 copper-4.99 zinc-0.01 tin.	62 grains	12,000,000
			18,306,363
Netherlands East Indies:			
2½ cents	95 copper-5 zinc	12.5 grams	14,199,000
1 cent	do	4 grams	7,476,000
			21,675,000

[1] All coined at the Philadelphia Mint except for Colombia, which were coined at the San Francisco Mint.

Coinage by the United States Mints for other countries during the fiscal year 1947 [1]—Continued

Country and denomination	Composition	Gross weight per coin	Number of pieces coined

			51,160,000
Grand total			334,085,727

[1] All coined at the Philadelphia Mint except for Colombia, which were coined at the San Francisco Mint.

Issue of United States coin.—The mint institutions issued 1,399,314,937 United States coins with a value of $72,923,621 during the fiscal year 1947. Issues by denomination, number of pieces, and face value, were as follows:

Denomination	Number of pieces issued	Face value
Silver dollars	8,960,206	$8,960,206.00
Half dollars	10,756,978	5,378,489.00
Quarter dollars	51,288,938	12,822,234.50
Dimes	281,233,015	28,123,301.50
5-cent pieces	179,215,800	8,960,790.00
1-cent pieces	867,860,000	8,678,600.00
Total	1,399,314,937	72,923,621.00

Stock of coin in the United States.—The total stock of coin in the United States, as of June 30, 1947, is estimated at $1,765,007,387, comprising $493,462,387 in standard silver dollars, $922,656,000 in subsidiary coin, and $348,889,000 in minor coin. These figures include the amount of coin in the Mint Service institutions and other Treasury offices, in the Federal Reserve banks and branches, in commercial banks, and an estimated amount in circulation in the United States and its possessions. Not included are limited amounts of United States coin which circulate as legal tender in certain Latin American countries, chiefly in Cuba, the Dominican Repubic, El Salvador, Haiti, Honduras, and the Republic of Panama.

Medals

The medal department is located at the Philadelphia Mint. Medals and other decorations authorized by the armed services constituted the bulk of the work in 1947 as for the past several years. The medals and other distinguishing devices for the Army, Navy, Marine Corps, and Coast Guard, totaled over 2,400,000 pieces during the year. In addition, there were 426 private medals made, and 5,649 commemorative list medals sold from regular stock.

Engraving department

All coinage and medal dies used by the mints are produced by the engraving department located at the Philadelphia Mint. During the fiscal year 1947 the department issued 15,930 working dies for domestic coinage; 5,010 working dies for foreign coinage; 436 dies, hubs, etc., for medals and insignia; 7 sculptured models; and other items—a total of 21,746 issues during the year.

Gold and silver operations

Bullion deposit transactions.—Bullion deposit transactions at the mints and assay offices during the fiscal year 1947 totaled 11,123, including 53 intermint transfers. Assay determinations required by the deposit transactions totaled 19,850, including 807 determinations for the intermint transfers.

Gold and silver stocks.—Gold stocks of the Treasury on June 30, 1947, amounted to 607,614,013 fine ounces with a value of $21,266,490,450, of which 607,611,117 fine ounces with a value of $21,266,389,119 were in custody of the Mint Service institutions.

Treasury silver stocks, exclusive of finished silver coin, totaled 1,677,806,488 fine ounces on June 30, 1947. Of this amount, 812,471,764 fine ounces were held by the Office of Defense Plants of the Reconstruction Finance Corporation, etc. For location of gold and silver stocks, by mint institution, see table in the Addenda titled "Cash assets and liabilities of the United States mint institutions on June 30, 1947."

Gold acquisitions.—During the fiscal year 1947 gold acquisitions, entered as classified melted receipts, amounted to $1,538,202,712; receipts of domestic coin melted amounted to $176,670; and transfers between mint institutions amounted to $15,129,752—a grand total of $1,553,509,134. These transactions included $2,774 in gold received at $20.67+ per fine ounce, the increment on which was $1,923.

Silver acquisitions.—Purchases and deposits of all classes of silver at the mints and assay offices aggregated 99,066,705 fine ounces during the fiscal year 1947. Receipts, classified according to mint accounts, are listed herewith:

Class of bullion	Number of fine ounces received	Class of bullion	Number of fine ounces received
Newly-mined domestic silver:		Recoinage bullion from uncurrent silver dollars	49,917.06
Purchased at $0.7111+ per ounce	262,540.05	Intermint transfers of silver	7,730,415.72
Purchased at $0.905 per ounce	18,087,517.42	Deposits of silver in trust by foreign governments	5,400,921.77
Silver contained in gold deposits, etc.	551,518.51	Redeposits [1]	65,243,410.74
Silver received in exchange for Government-stamped bars	526,071.71	Grand total	99,066,705.13
Recoinage bullion from uncurrent subsidiary coin	1,214,392.15		

[1] Consists of Treasury stock previously on loan to the Office of Defense Plants of the Reconstruction Finance Corporation, etc.

Silver from domestic ores mined prior to July 1, 1946, was purchased at $0.7111+ per fine ounce, in accordance with the act of July 6, 1939. Silver from domestic ores mined subsequent to July 1, 1946, was purchased at $0.905 per fine ounce, in accordance with the act of July 31, 1946. Other miscellaneous purchases of silver, including silver contained in gold deposits, etc., were made at prices slightly under the current open-market rates. The New York daily market quotations for bar silver 0.999 fine ranged from a high of 90⅛ cents to a low of 59¾ cents per ounce during the year under review.

Refineries.—Electrolytic refineries are maintained at the San Francisco, New York, and Denver institutions. During the fiscal year 1947 the refineries operated upon approximately 667 tons of metal, in terms of the fine gold and silver content of the ores and bullion. The electrolytic output amounted to 3,446,442 fine ounces of gold, and 3,684,856 fine ounces of silver. In addition, 2,051,809 fine ounces of gold and 7,782,836 fine ounces of silver were subject to fire process only.

Stocks of unrefined bullion.—The stocks of unrefined bullion, in terms of the assayed fine gold and silver content, as of June 30, 1947, is shown for each institution in the following table:

Institution	Gold	Silver	Total	
	Fine ounces	Fine ounces	Fine ounces	Tons
Philadelphia	8,019.420	24,355.13	32,374.550	1.11
San Francisco	6,136,634.326	3,419,590.47	9,556,224.796	327.64
Denver	16,342,341.164	5,841,819.95	22,184,161.114	760.60
New York	6,695,599.650	1,083,418.37	7,779,018.060	266.71
Seattle	23,097.540	6,055.13	29,152.670	1.00
Total	29,205,692.140	10,375,239.05	39,580,931.190	1,357.06

Issue bars manufactured.—Gold issue bars manufactured in 1947 numbered 113,005, and contained 30,833,735 fine ounces of gold with a value of $1,079,180,740. Silver issue bars manufactured in 1947 numbered 2,964, and contained 1,154,005 fine ounces of silver. In addition, the New York Assay Office manufactured 603 gold ingots containing 58,640 fine ounces, and 210,883 silver coinage ingots containing 7,442,881 fine ounces for use at the Philadelphia Mint.

Sales for industrial and artistic use.—During 1947 sales of gold bars for use in industry and the arts totaled $66,113,173. Silver sold under the authority of the act of July 31, 1946, at 91 cents per fine ounce, amounted to 8,198 fine ounces during the year. In addition, small quantities of gold and silver from the stock of ordinary bullion were sold for medals, etc. Sales of gold bars by months were as follows:

Month	Value of gold bars issued	Month	Value of gold bars issued
1946:		1947:	
July	$8,092,270.72	January	$5,877,317.15
August	10,497,648.45	February	3,840,095.47
September	7,517,027.82	March	2,058,504.21
October	9,564,308.40	April	916,508.47
November	10,988,012.75	May	839,556.95
December	5,504,753.79	June	417,168.47
		Total	66,113,172.65

Monthly sales of silver under the act of July 31, 1946, by institution, were as follows:

Month	Philadelphia	San Francisco	Denver	Total
	Fine ounces	*Fine ounces*	*Fine ounces*	*Fine ounces*
1946:				
July	109.00	3,240.15		3,349.15
August		364.45		364.45
September	50.00	140.08	985.86	1,175.94
October	310.44	999.50		1,309.94
November		500.00		500.00
December				
1947:				
January		500.12		500.12
February				
March				
April			998.70	998.70
May				
June				
Total	469.44	5,744.30	1,984.56	8,198.30

Receipts and disbursements of gold bullion.—Receipts and disbursements of gold bullion during the fiscal year 1947, and balances on hand June 30, 1947, as compared with June 30, 1946, are shown in the following table:

Institution	Balance on hand June 30, 1946	Receipts during fiscal year 1947 (details below) [1]	Total	Disbursements during fiscal year 1947 (details below) [1]	Balance on hand June 30, 1947
Philadelphia	$3,637,881.94	$3,738,676.29	$7,376,558.23	$4,634,592.44	$2,741,965.79
San Francisco	388,770,080.54	28,849,205.69	417,619,286.23	1,274,584.32	416,344,701.91

Monetized silver.—During the fiscal year 1947 silver certificates in the amount of $14,814,384 were issued by the Treasury against 11,458,000 fine ounces of silver bullion valued at $1.29+ per fine ounce, the statutory monetary value of silver. The difference between the cost and the monetary value of the silver was $4,473,406, which constituted seigniorage.

Silver consumed in domestic coinage.—Silver consumed in domestic coinage during the year amounted to 38,148,011 fine ounces, producing coin with a face value of $52,736,147.50, and with seigniorage amounting to $33,402,486.

Operations of the melting and refining and of the coining departments, fiscal year 1947

The aggregate quantity of metals operated upon in the melting and refining department and the coining department of the three mints and the New York Assay Office during the fiscal year ended June 30, 1947, totaled 43.5 million fine ounces of gold and 213.1 million fine ounces of silver. There were also operated upon at the mints 689.2 million ounces of minor coinage metals. The data in the table following are based upon the figures obtained at the settlements of the accounts for the fiscal year. Legal limits of wastage on the whole amount delivered by the superintendent to the operative offices, as prescribed in section 3542 of the Revised Statutes, are as follows: Melter and refiner—gold, 0.001; silver, 0.0015; coiner—gold, 0.0005; silver, 0.001.

Production and consumption of gold and silver in the United States

Production of gold and silver refined from ores mined in the United States and its possessions during the calendar year 1946 was as follows: Gold, 1,462,354 fine ounces with a value of $51,182,390; and silver, 21,103,269 fine ounces. Distribution of production by State of origin appears on pages 15–16.

Gold issued for use in the industrial arts in the United States during the calendar year 1946 aggregated $199,686,837, with a return from industrial use of old jewelry, plate, scrap, etc., amounting to $45,999,837, giving a net consumption of new gold amounting to $153,687,000. Silver issued for use in arts and industry during the calendar year 1946 aggregated 123,646,860 fine ounces, with a return of old plate, scrap, etc., yielding 36,646,860 fine ounces, giving a net consumption of new silver equivalent to 87,000,000 fine ounces.

Assay Commission's Annual Test of Coin for 1946

Section 3547 of the Revised Statutes of the United States, provides for an annual test of the domestic coinage executed during each calendar year by a commission of whom part are ex officio members, the others, who serve without compensation, being appointed by the President. The purpose is to secure a due conformity in the silver coins to their respective standards of fineness and weight. The Commission, which met at the Philadelphia Mint February 12, 1947, reported the following results of their examination of the 1946 coinage:

Annual assay coins reserved at various mints during the calendar year 1946

Denomination	Philadelphia		Denver		San Francisco	
	Pieces	Value	Pieces	Value	Pieces	Value
Half dollars	6,612	$3,306.00	1,177	$588.50	2,112	$1,056.00
Quarter dollars	26,718	6,679.50	4,538	1,134.50	2,102	525.50
Dimes	127,625	12,762.50	30,522	3,052.20	13,950	1,395.00
Total	160,955	22,748.00	36,237	4,775.20	18,164	2,976.50

REPORT OF THE COMMITTEE ON COUNTING

To the Chairman and Members of the Board of Assay Commissioners:

In accordance with section 3539 of the Revised Statutes, your committee on counting reports that the packages said to contain the pieces reserved by the several mints for the trial of coins were delivered to us by the Superintendent of the Mint of Philadelphia. Verification of the coins reserved was made by checking same against the original record of coin deliveries and reservations for assay in respect to the Philadelphia Mint, and against transcripts furnished the committee showing reservations for assay from the Denver and San Francisco Mints.

At random we selected from the deliveries a certain number of packages, and it was the intention of the committee to include all denominations. Of the packages selected, the coins contained therein were counted and found to agree with the number as designated on each envelope from the different mints.

REPORT OF THE COMMITTEE ON WEIGHING

The committee on weighing reports that it selected at random a total of 111 coins, consisting of 57 coins from the Philadelphia Mint, 28 coins from the Denver Mint, and 26 coins from the San Francisco Mint. These coins were taken from 51 different deliveries and are believed to be adequately representative of the year's coinage of each mint.

The coins were weighed directly against weights from the set of coin and grain weights regularly reserved for the use of the Commission. This set was delivered under seal of the National Bureau of Standards, and was accompanied by a certificate from that Bureau showing that the errors of all weights of the set were negligible.

Weighings were made with a precision of 0.01 grain on a balance, the sensitiveness, accuracy and reliability of which was tested and found adequate before the beginning of the work on February 12, and again on the morning of February 13.

It is to be noted that the weight of each coin was well within the tolerance allowed by law.

The following table shows the maximum deviation of the heaviest and lightest coins of the denominations set forth below as found from individual weighings:

Denomination	Legal deviation allowed	Actual deviation					
		Philadelphia		Denver		San Francisco	
		Heavy	Light	Heavy	Light	Heavy	Light
	Grains	*Grains*	*Grains*	*Grains*	*Grains*	*Grains*	*Grains*
Half dollar	1.5					0.77	0.80
Quarter dollar	1.5	0.85	0.90	0.90	0.79		
Dime	1.5	1.21	1.07	.90	.48	.89	.35

Considering the 111 coins as a group, the average deviation with regard to sign was found to be only 0.038 grain. In other words, of the coins weighed, the heavy coins were very nearly offset by the light coins. The average error without regard to sign was 0.39 grain. In general, any coin taken at random from any Mint appears equally likely to be heavy or light.

REPORT OF THE COMMITTEE ON ASSAYING

In compliance with section 3547 of the Revised Statutes, the Committee on Assaying is pleased to report that the assays have been completed on samples taken from the different lots of coin, representing all denominations of silver coined during the calendar year 1946, by the United States Mints at Philadelphia, Denver, and San Francisco.

The results of assays on individual coins and mass melts of coins are satisfactory, being well within the limits of tolerance, which is three one-thousandths for silver coins.

The highest and lowest assay on an individual coin from each of the three mints is as follows:

	Highest	*Lowest*
Philadelphia Mint	900.6	898.6
Denver Mint	900.0	898.6
San Francisco Mint	900.0	899.3
Result of mass Melting:		
Philadelphia Mint	899.3	
Denver Mint	899.3	
San Francisco Mint	899.4	

The assay balances were tested and found to be in adjustment. The nitric acid used for assaying was found to be free from chlorine and the weights used for weighing the samples for assay were checked against a set that had been standardized by the National Bureau of Standards.

[1] Allotment made from a lump construction appropriation.

The foregoing report, covering the operations of the mints, assay offices, and bullion depositories of the United States for the fiscal year ended June 30, 1947, is respectfully submitted.

NELLIE TAYLOE ROSS,
Director of the Mint.

Hon. JOHN W. SNYDER,
Secretary of the Treasury.

REPORT OF THE DIRECTOR OF THE MINT ON THE PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES FOR THE CALENDAR YEAR 1946

REPORT ON PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1946

INTRODUCTION

The official estimate of production of gold and silver in the United States, made by the Bureau of the Mint, is based upon arrivals at United States Mints and Assay Offices and at privately owned refineries. The mints and assay offices determine the State source of all newly mined unrefined material at the time deposits are received. The State source of material received by privately owned refineries is determined from information submitted by them and by intervening smelters, mills, etc., involved in the reduction processes.

The estimated industrial consumption of gold and silver is based upon sales by mints and assay offices, private refiners, dealers and manufacturers, plus an estimate of domestic coin melted for industrial use. From the total thus calculated there is deducted the old jewelry, plate, scrap, etc., received by the same concerns, giving net materials consumed.

Gold production

Production of gold during the calendar year 1946 by the several States and the Territory of Alaska (based upon arrivals at mints and assay offices and at private refineries) totaled 1,462,354 fine ounces with a value of $51,182,390, an increase of 57 percent over the 1945 production of $32,511,255. California recorded the highest production in 1946 ($12.2 million), followed by South Dakota ($10.8 million), Alaska ($6.7 million), Utah ($5.3 million), and Colorado ($4.5 million).

Production of gold mined in the several States and Territories, with percentage increase (+) or decrease (−), calendar years 1945 and 1946 (based on arrivals at mints and assay offices and at private refineries)

State in which mined	1945		1946		Increase or decrease in 1946, percent
	Fine ounces	Value	Fine ounces	Value

[1] Independent of the United States in 1946.

The grand total production of gold in the continental United States and its possessions since 1792 has amounted to 275,974,990 fine ounces, with a value of $6,379,655,745. For production by calendar years 1792–1943, see page 36 of the 1944 Annual Mint Report, and for years since 1943, each succeeding Annual Mint Report.

Silver production

Production of silver by the several States and the Territory of Alaska (based upon arrivals at mints and assay offices and at private refineries) totaled 21,103,269 fine ounces during the calendar year 1946. Idaho was the largest silver producing state (6.2 million ounces), followed by Utah (3.5 million ounces), Arizona (3 million ounces), Montana (2.7 million ounces), Colorado (2 million ounces), Nevada (1.3 million ounces), and California (1.2 million ounces). The Treasury price for domestic silver mined subsequent to July 1, 1939, and through July 1, 1946 was $0.7111+ per fine ounce (act of July 6, 1939); and for domestic silver mined subsequent to July 1, 1946, $0.905 per fine ounce (act of July 31, 1946). The New York open market quotations for bar silver 0.999 fine were 70¾ cents per ounce from January 1 through July 10, inclusive, increasing to 90⅛ cents on July 11 and remaining at that price through December 4. Quotations during the remainder of December fluctuated as follows: On the fifth, 87½ cents; sixth, 87¾; ninth, 88½; tenth, 87; sixteenth, 87⅛; nineteenth, 86⅛; twentieth 85¾; and on the twenty-fourth, 84¾ cents.

Production of silver mined in the several States and Territories, with percentage increase (+) or decrease (−), calender years 1945 and 1946 (based on arrivals at mints and assay officers and at private refineries)

State in which mined	1945	1946	Increase or decrease in 1946
	Fine ounces	*Fine ounces*

[1] Less than 1 fine ounce.
[2] Independent of the United States in 1946.

The grand total silver production of the continental United States and its possessions since 1792 has aggregated 3,912,117,943 fine ounces. For production by calendar years 1792–1943, see page 36 of the 1944 Annual Mint Report, and for years since 1943, each succeeding Annual Mint Report.

Gold and silver consumption

Net gold consumed in the industrial arts during the calendar year 1946 is estimated at 4,391,057 fine ounces with a value of $153,687,000, a 41 percent increase over the amount consumed in 1945. Net silver consumed in the arts and industries is estimated at 87,000,000 fine ounces in 1946, a decrease of 31 percent from the 126,300,000 fine ounces consumed in 1945. The statement following gives in more detail the items comprising the 1946 estimate.

Item	Gold	Silver
	Value [1]	*Fine ounces*
Government-stamped bars issued by mints and assay offices	$123,253,662	[2] 334,732
Bullion in various forms issued by private refiners and dealers	76,433,175	123,223,183
United States coin (estimated)		88,945
Total issued	199,686,837	123,646,860
Old jewelry, plate, scrap, etc., returned to private refiners, dealers, and to monetary use	45,999,837	36,646,860
Net new material issued	153,687,000	87,000,000

[1] Gold valued at $35 per fine ounce.
[2] Includes 7,200 fine ounces of silver sold under authority of the act of July 31, 1946.

Monthly issues of gold bars for cash by the mints and assay offices were as follows:

Month	Value of gold bar sales	Month	Value of gold bar sales
1946:		1946—Continued	
January	$9,779,787.75	August	$10,497,648.45
February	8,444,024.92	September	7,517,027.82
March	12,601,887.15	October	9,564,308.40
April	15,906,305.44	November	10,988,012.75
May	13,742,799.13	December	5,504,753.79
June	10,615,136.09		
July	8,092,270.72	Total	123,253,662.41

Review of gold and silver mining industry

A review of the gold and silver mining industry in the various States and Alaska for the calendar year 1946, for which acknowledgment is made to the United States Bureau of Mines, follows. It should be noted that production figures stated therein are based on a mine canvass of recoverable metal and, due principally to the time lag involved before this material reaches the mints and assay offices and private refineries, will not necessarily agree, on a yearly basis, with the figures published by the Bureau of the Mint.

ALASKA

The value of the production of gold and silver from mines in Alaska was $7,971,104 in 1946, compared with $2,391,194 in 1945, according to Alfred L. Ransome of the United States Department of the Interior, Bureau of Mines. The 226,781 fine ounces of gold valued at $7,937,335 recovered from ores and gravels, an increase of 233 percent from the 1945 output, was still far short of the general level of output during the few years immediately preceding the war (in 1940, 755,970 ounces, valued at $24,341,345). Alaska silver production in 1946 totaled 41,793 fine ounces valued at $33,769, an increase of 319 percent in quantity and 376 percent in value from 1945.

Placer mines produced 97 percent of the total Alaska output of gold and connected-bucket dredges 65 percent, compared with 85 percent for all placers and 51 percent for dredges in 1945. Twenty-four dredges operated in 1946 compared with 14 in 1945. Other placer operations numbered 282 and recovered 32 percent of the total gold produced, compared with 188 operations producing 34 percent in 1945. The connected-bucket dredge operators producing over 3,500 ounces of gold in 1946, listed in order of output, were: United States Smelting, Refining, & Mining Co., Fairbanks district; New York-Alaska Gold Dredging Co., Tuluksak-Aniak district; Arctic Circle Exploration Co., Fairhaven district; Alluvial Golds, Inc., Circle district; Brinker-Johnson, Fairbanks district; and Gold Placers, Inc., Circle district. The only other placer operator producing over 3,500 ounces was the Cripple Creek Mining Co., Innoko district, using dragline equipment.

Sixteen lode mines were active in 1946, two less than in 1945, and these contributed 3 percent of the total gold output, compared with 15 percent in 1945. As in 1945, nearly all the lode gold was recovered from gold ore by amalgamation. The continued idleness of the Alaska Juneau Gold Mining Co. was the principal reason for the relative unimportance of lode gold in Alaska's total production. However, gold recovered from a mill clean-up resulted in the company ranking as Alaska's largest lode gold producer in 1946. The Cleary Hill Mines Co., the second largest producer in 1946, operated its mine on Cleary Creek in the Fairbanks district. The Alaska Pacific Consolidated Mining Co., operating its Independence mine on Fishhook Creek in the Willow-Creek district, ranked third.

The total production of gold and silver in Alaska, in terms of recovered metals, from 1880 through 1946, has been 26,083,428 ounces of gold, valued at $625,934,582, and 19,790,298 ounces of silver, valued at $14,081,591.

ARIZONA

The output of gold in Arizona increased from 77,223 fine ounces valued at $2,702,805 in 1945 to 79,024 fine ounces valued at $2,765,840 in 1946, a gain of 2 percent, according to C. E. Needham and Paul Luff of the United States Department of the Interior, Bureau of Mines. Gold from lode mines increased from 76,683 ounces in 1945 to 78,626 ounces in 1946, but that from placers decreased from 540 ounces to 398 ounces. Copper ore yielded 77 percent of the State gold in 1946 (80 percent in 1945); zinc-lead ore, 16 percent (14 percent in 1945); siliceous ores, 4 percent (3 percent in 1945); and lead ores and placers, most of the remainder. Ore amalgamated furnished 194

ounces of gold; ore and old tailings cyanided, 889 ounces; concentrates smelted, 62,422 ounces; and crude ore smelted, 15,121 ounces.

About 89 percent of the State gold in 1946 came from seven districts—Ajo, Big Bug, Copper Mountain (Morenci), Globe-Miami, Pioneer (Superior), Verde (Jerome), and Warren (Bisbee). The New Cornelia mine of the Phelps Dodge Corp., Pima County, was by far the leading gold producer in Arizona. It was followed by the Iron King and United Verde mines, Yavapai County; the Magma mine, Pinal County; the Copper Queen (Bisbee) branch of the Phelps Dodge Corp., Cochise County; the Morenci branch of the Phelps Dodge Corp., Greenlee County; and the Castle Dome mine, Gila County. These seven properties, nearly all copper mines, produced 86 percent of the State total gold.

The total gold production in Arizona, in terms of recovered metal, from 1860 through 1946 has been 10,868,159 ounces valued at $267,880,720.

The output of recoverable silver in Arizona in 1946 was 3,268,765 fine ounces valued at $2,641,162, a decline of 8 percent in quantity but an increase of 4 percent in value compared with the 1945 output of 3,558,216 ounces valued at $2,530,287. Copper ore yielded 54 percent of the State silver in 1946 (59 percent in 1945), and zinc-lead ore, 37 percent (32 percent in 1945); the remainder came principally from siliceous ores, lead ore, zinc-lead-copper ore, lead-copper ore, and zinc-copper ore. Silver from copper ore declined 348,879 ounces (16 percent), and that from zinc-copper ore 58,071 ounces (76 percent); however, the output from zinc-lead ore increased 83,693 ounces (7 percent), and that from siliceous ores 18,590 ounces (12 percent).

Nearly 35 percent of the State total silver in 1946 came from the Warren (Bisbee) and Verde (Jerome) districts, but the output from these districts decreased 298,757 ounces from that in 1945. The Phelps Dodge Corp. continued to be the chief silver producer in Arizona, although its output was nearly 11 percent less than in 1945; its four properties (Copper Queen, Morenci, New Cornelia, and United Verde) produced more than 54 percent of the State silver in 1946. Other large silver producers were the Iron King, Magma, San Xavier (Eagle-Picher Mining & Smelting Co.), Trench-Flux, Castle Dome, and St. Anthony properties.

The total silver production in Arizona, in terms of recovered metal, from 1860 through 1946 has been 292,687,414 ounces valued at $217,264,699.

CALIFORNIA

Gold production in California in 1946 was nearly 1½ times the output in 1945, but still far below the pre-war level (1,408,793 fine ounces in 1941), according to Alfred L. Ransome, of the United States Department of the Interior, Bureau of Mines. Silver production was 36 percent higher than in 1945, making 1946 the third consecutive year of increase.

The marked increase in the production of gold since the rescinding of War Production Board Order L–208 July 1, 1945, was due largely to the rapid acceleration in placer mining, principally by connected-bucket dredging. The rate of increase in production would have been even greater had lode gold mining been reestablished with equal rapidity. With the exception of a few properties, many of the mines

that were large producers before the war had not reopened, and one famous producer, the Empire Star Mines Co., Ltd., suspended operation of its Empire Star group of mines in the Grass Valley-Nevada City district, Nevada County, on July 1, 1946. The principal reasons for this shutdown, as well as the failure of so many other properties to reopen, were the fixed price for gold and the over-all inflationary trend which affected all costs of mining and labor.

Monthly production of gold in 1946 gained rapidly during the first quarter to continue the swing upward which began in July 1945. From March through July the monthly output remained relatively unchanged at about 29,700 ounces. Following a rise to 34,340 ounces in August, the monthly rate of production again leveled off for the balance of the year. The monthly average for 1946 was 29,735 ounces compared with 12,328 ounces in 1945 and 9,781 ounces in 1944; in 1941 the monthly average was 117,399 ounces.

The output of recoverable gold from California ores, gravels, and re-treated tailings in 1946 was 356,824 fine ounces valued at $12,488,840 compared with 147,938 ounces valued at $5,177,830 in 1945, an increase of 141 percent in quantity and value. In 1946, 150 lode mines produced 87,052 ounces of gold valued at $3,046,820, and 172 placer mines produced 269,772 ounces of gold valued at $9,442,020. Placer mines supplied 76 percent and lode mines 24 percent of the total in 1946 compared with 63 percent for placer mines and 37 percent for lode mines in 1945. Of the gold derived from lode operations, 92 percent was recovered from dry gold ore, 4 percent from zinc ore, 2 percent from dry gold-silver ore, 1 percent from lead ore, and the remainder from zinc-copper, copper, zinc-lead, and dry silver ores. Metallurgical data show that 53 percent of the lode gold in 1946 (51 percent in 1945) was recovered by amalgamation of ore, 31 percent (22 percent in 1945) by cyanidation of ore, old tailings, and concentrates, 10 percent (21 percent in 1945) by smelting of concentrates, and 6 percent (6 percent in 1945) by smelting of ore and old tailings.

The yardage of material handled at placer mines increased 163 percent, and the output of placer gold gained 189 percent. Lode gold production increased 60 percent, whereas the tonnage of material treated decreased 13 percent.

In the following data on placer mining, 1945 figures are given in parentheses. Floating dredges of the connected-bucket type washed 78,175,000 (30,738,000) cubic yards of gravel and recovered 244,679 (88,318) ounces of gold valued at $8,563,765 ($3,091,130) or 93 (94) percent of the placer gold produced in the State in 1946. Dragline dredges (those having a floating washing plant to which gravel is delivered by a dragline excavator) washed 4,309,000 (414,400) yards of gravel which yielded 16,932 (1,242) ounces of gold valued at $592,620 ($43,470). Nonfloating washing plants to which gravel was delivered by mechanical means washed 771,000 (519,300) yards of gravel and recovered 2,576 (974) ounces of gold valued at $90,160 ($34,090). Hydraulic mines produced 1,147 (922) ounces of gold valued at $40,145 ($32,270) derived from 443,300 (282,300) yards of gravel. Drift mining accounted for 158 (498) ounces of gold valued at $5,530 ($17,430) from 5,700 (2,700) yards of gravel, and suction dredging produced 112 (none) ounces of gold valued at $3,920 from 22,900 yards of gravel. Small-scale hand-operated equipment, including small

sluice boxes, long toms, dip boxes, rockers, and pans, was used in the production of 4,168 (1,526) ounces of gold valued at $145,880 ($53,410).

Sacramento and Yuba Counties, because of the increased productivity of connected-bucket dredges, ranked first and second among the California gold-producing counties in 1946. Nevada County came third, the gold coming principally from lode mines in the Grass Valley-Nevada City district. Stanislaus and Butte Counties, which occupied fourth and fifth place, respectively, derived almost all the 1946 gold production from connected-bucket dredging. Other counties producing over $200,000 in gold in 1946, listed in order of output, were Trinity County (largely connected-bucket dredging), San Joaquin County (connected-bucket dredging), Shasta County (dredging), Sierra County (gold ore), Siskiyou County (dredging), and Calaveras County (principally zinc ore).

The principal gold-producing mines in California in 1946, listed by operators in order of output, were the Natomas Co., Sacramento County (dredge); Yuba Consolidated Gold Fields (Yuba unit), Yuba County (dredge); Idaho Maryland Mines Corp., Nevada County (gold ore); Tuolumne Gold Dredging Corp., Stanislaus County (dredge); Capital Dredging Co., Sacramento County (dredge); Gold Hill Dredging Co., San Joaquin County (dredge); Junction City Mining Co., Trinity County (dredge); Yuba Consolidated Gold Fields (Butte unit), Butte County (dredge); La Grange Gold Dredging Co., Stanislaus County (dredge); Original Sixteen to One Mine, Inc., Sierra County (gold ore); Empire Star Mines Co., Ltd., Nevada County (gold ore); Lancha Plana Gold Dredging Co., Sacramento County (dredge); Thurman Gold Dredging Co., Shasta County (dredge); Gold Hill Dredging Co., Butte County (dredge); and Thurman & Wright, Sacramento County (dredge).

Production of silver from California ores, gravels, and re-treated tailings in 1946 was 1,342,651 fine ounces valued at $1,084,862, compared with an output of 986,798 ounces valued at $701,723 in 1945. Of the lode silver 72 percent was derived from lead ore, 10 percent from zinc ore, 7 percent from zinc-copper ore, 4 percent from dry gold ore, 3 percent from dry gold-silver ore, and the remainder from copper, zinc-lead, and dry silver ores. A small quantity of silver was recovered as a byproduct of dredging and other placer mining carried on principally for gold. Smelting of ore and old tailings supplied 73 percent of the lode silver uncovered in the State, smelting of concentrates 25 percent, and amalgamation and cyanidation of ore and old tailings 2 percent.

The principal silver-producing mines in California in 1946, listed by operators in order of output, were Anaconda Copper Mining Co., Inyo County (lead ore); Shawmut Copper Mine Co., Calaveras County (zinc ore); The Mountain Copper Co., Ltd., Shasta County (zinc-copper ore); Finley Co., Inyo County (lead ore); Frank W. Royer, San Bernardino County (gold-silver ore); J. Q. Little (under contract from the Crystal Cave Mining Co.), San Bernardino County (zinc ore); Emerson A. Ray, et al, San Bernardino County (lead and zinc-lead ores); L. D. Forman & Co., Inyo County (lead ore and old slag); United States Vanadium Corp., Inyo County (tungsten ore); and Pacific Mining Co., Amador County (copper ore).

CENTRAL STATES

No production of gold has been reported by mines in the Central States since 1941; the output of recoverable silver in 1946 totaled 71,703 fine ounces valued at $57,936 compared with 118,883 ounces valued at $84,539 in 1945, according to A. J. Martin of the United States Department of the Interior, Bureau of Mines. The producing States in 1946 were Illinois and Missouri. Ordinarily silver is recovered from some of the copper ore mined in Michigan, but none of the bullion derived from this ore was shipped to electrolytic refineries for recovery of silver during 1946, and no silver was reported recovered from tables or jigs in the mills. The Missouri output of silver was 69,401 ounces compared with 94,822 ounces in 1945. Most of the output was recovered as a byproduct by smelters treating lead concentrates produced in Southeastern Missouri region. In the sale of the lead concentrates, no value is attached to the silver, as the quantity recovered per ton of concentrates is very small. In some years (including 1944–46) a little silver has been recovered from copper concentrates made in milling lead-copper and lead-copper-cobalt-nickel-iron ore mined at Fredericktown, Mo. The St. Joseph Lead Co. has been the principal producer of silver in Missouri for many years. The silver produced in Illinois was recovered from lead concentrates shipped from mills treating zinc-lead fluorspar and lead fluorspar ores mined in Southern Illinois; the quantity recovered in 1946 was 2,302 ounces compared with 2,198 ounces in 1945.

COLORADO

Production of recovered gold increased 41 percent in Colorado in 1946 compared with 1945, according to S. A. Gustavson of the United States Department of the Interior, Bureau of Mines. However, this was the lowest output of any year since 1876, except the war years 1943 through 1945. There was no material change in the production of silver in 1946. Colorado mines in 1946 yielded, in terms of recovered metals, 142,613 fine ounces of gold valued at $4,991,455 and 2,240,151 fine ounces of silver valued at $1,810,042. The shortage of underground workers in the principal gold-producing districts was the greatest single deterrent in the resuming of full-scale operations by gold and silver lode mines in the State in 1946. The resumption of new placer dredging operations, chiefly in Park County, and a full-year operation by the Golden Cycle Corp. in Teller County contributed greatly to the increase in gold production in 1946 over 1945.

Ore sold or treated in Colorado totaled 1,463,496 tons in 1946, compared with 1,357,551 tons in 1945. In all, 235 lode mines and 28 placer mines were active in 1946 compared with 195 lode mines and 41 placer mines in 1945.

Virtually all the ore produced from Colorado mines in 1946 contained gold as a valuable constituent. However, ores from mines in Boulder, La Plata, Montezuma, Park, Rio Grande, and Teller Counties were valuable chiefly for their gold content. The principal gold-producing districts in 1946 were Cripple Creek in Teller County, which produced 34 percent of the State output of recovered gold; Upper San Miguel in San Miguel County, 17 percent; Fairplay and

Tarryall in Park County, 13 percent; Animas in San Juan County, 11 percent; and California (Leadville) in Lake County, 8 percent. Dry and siliceous ores yielded 74 percent of the State total gold; placers, 14 percent; zinc-lead ore, 9 percent; and zinc, lead, copper, and lead-copper ores, 3 percent.

Mine production of recovered silver in Colorado in 1946 increased less than 1 percent over that of 1945. The total value of production, however, rose substantially because of the higher average silver price prevailing in 1946. The leading silver-producing districts in the State were Upper San Miguel in San Miguel County, which produced 16 percent of the State total silver; Creede in Mineral County, 16 percent; Animas in San Juan County, 15 percent; California (Leadville) in Lake County, 15 percent; and Pioneer in Dolores County, 8 percent. Dry and siliceous ores yielded 58 percent of the State total silver; zinc-lead ore, 33 percent; zinc ore, 5 percent; and lead, copper, and lead-copper ores and placers, 4 percent.

The Golden Cycle mill at Colorado Springs operated throughout the year on company and custom ores. During the war period this company accepted all classes of ore; however, beginning December 1, 1945, the company accepted only gold and gold-silver ores, chiefly from Teller County. The company mill treated a total of 306,790 tons of ore in 1946 compared with 227,063 tons in 1945.

The placer gold output in Colorado in 1946 was recovered chiefly from one floating connected-bucket dredge and two dragline dredges operated in Park County.

The total production of gold and silver in Colorado, in terms of recovered metals, from 1858 through 1946 has been 39,057,943 fine ounces of gold valued at $860,904,969 and 730,426,678 fine ounces of silver valued at $567,570,125.

EASTERN AND APPALACHIAN STATES

The mine output of gold in the Eastern and Appalachian States in 1946 decreased 23 percent from 1945 and was the lowest since 1932, according to A. J. Martin of the United States Department of the Interior, Bureau of Mines. The quantity produced in 1946 was 1,432 fine ounces valued at $50,120 compared with 1,857 ounces in 1945 valued at $64,995. Economic conditions in 1946 were not favorable for gold mining in the Eastern States, and no production was reported from straight gold or gold-silver lode mines during the year. The old Calhoun gold mine in Lumpkin County, Ga., was under development by Calhoun Mines, Inc., which drove 530 feet of tunnel and 140 feet of drifts. The Haile mine in Lancaster County, S. C., and the Condor (old Howie) in Union County, N. C., leading producers of gold in the Eastern States when the wartime shut-downs occurred in 1942, were not reopened in 1946 because of continued unfavorable labor conditions. Individuals recovered a total of 22 ounces of gold from placers in Georgia and Alabama. The Georgia output (21 ounces) came from the Baggs Branch, Battle Branch, Consolidated, and Mill Creek placers in Lumpkin County and the Kin Mori placer in Dawson County. In Alabama 1 ounce was recovered by sluicing on the Hog Mountain property in Tallapoosa County.

Gold recovered incidental to the production of other metals comprised 1,150 ounces from Pennsylvania, 165 ounces from Vermont,

and 95 ounces from Tennessee. The Pennsylvania output was recovered in treating magnetite-pyrite-chalcopyrite ore from the Cornwall mine in Lebanon County. Tailings from magnetic separators are treated by flotation for recovery of copper concentrate, which contains gold and silver, and pyrite concentrate, which contains cobalt. The copper concentrate is shipped to the Phelps Dodge Refining Corp. smelter and electrolytic refinery at Laurel Hill, N. Y., where gold and silver are recovered. The Vermont output of gold, also contained in copper concentrate shipped to the Laurel Hill Plant, was derived from copper ore from the Elizabeth mine in Orange County. The gold produced in Tennessee was recovered from copper-iron-zinc sulfide or from the Tennessee Copper Co. mines in the Ducktown district, Polk County. Some of the ore was smelted direct in the company smelter at Copperhill, but most of it was concentrated in selective flotation mills. The products of the mills were copper, iron, and zinc concentrates. The recoverable gold and silver were contained in the copper concentrate that was smelted to produce blister copper, which was shipped to an electrolytic refinery.

Silver produced by mines in the Eastern States in 1946 totaled 76,964 ounces valued at $62,187 compared with 81,983 ounces valued at $58,299 in 1945. The Treasury buying price for newly mined silver, which had stood at 71.1+ cents per fine ounce from July 1, 1939 to June 30, 1946, was advanced to 90.5 cents effective July 1, 1946. Most of the silver output in 1946 was recovered from copper concentrates shipped to smelters and electrolytic refineries from the mines that produced byproduct gold also. The Elizabeth mine in Vermont contributed 35,275 ounces of recoverable silver, the Tennessee Copper Co. mines in Tennessee 18,016 ounces, and the Cornwall mine in Pennsylvania 7,887 ounces. The rest of the output (15,786 ounces) was recovered from lead concentrates shipped from the Balmat zinc-lead mine in St. Lawrence County, New York.

IDAHO

The output of recoverable gold in Idaho increased 142 percent from 17,780 fine ounces valued at $622,300 in 1945 to 42,975 fine ounces valued at $1,504,125 in 1946, according to C. E. Needham and Paul Luff of the United States Department of the Interior, Bureau of Mines. The yield of gold from lode mines rose from 16,011 ounces in 1945 to 22,852 ounces in 1946, and that from placer properties from 1,769 ounces to 20,123 ounces. This marked increase from placers resulted principally from resumption in the spring of dredging in the Boise Basin, Yankee Fork, Middle Boise, Elk City, Orogrande, and Gibbonsville districts. Of the State total gold in 1946, 40 percent came from bucket dredging, 39 percent from gold ore, 13 percent from zinc-lead ore, and most of the remainder from dragline dredging.

Nearly 87 percent of Idaho's gold in 1946 came from the Yellow Pine district in Valley County, Middle Boise (Atlanta) district in Elmore County, Boise Basin district in Boise County, Yankee Fork district in Custer County, and the Warm Springs district in Blaine County. The Bradley Mining Co., operating the Yellow Pine mine at Stibnite, was the leading State gold producer. It was followed by Talache Mines, Inc. (lode) at Atlanta, Snake River Mining Co. (bucket dredge) at Sunbeam, Baumhoff & Marshall (2 bucket dredges) near Centerville,

Pyramid Mining Co. (bucket dredge) near Twin Springs, Triumph mine (lode) at Triumph, Idaho-Canadian Dredging Co. (bucket dredge) at Idaho City, and Smith Bros. & Courtis, Inc., (dragline dredge) near Gibbonsville. Gold recovered from ore amalgamated amounted to 2,919 ounces; from concentrates smelted, 18,811 ounces; and from crude ore smelted, 1,122 ounces.

The total production of gold in Idaho, in terms of recovered metal, from 1863 through 1946 has been 7,840,749 ounces valued at $177,565,618.

In 1946 the output of recoverable silver in Idaho was 6,491,104 fine ounces valued at $5,244,812, a decline of 20 percent in quantity and 9 percent in value from the output of 8,142,667 ounces valued at $5,790,341 in 1945. Nevertheless, the State remained the largest producer of silver in the United States—a place it has held since 1933. The loss in 1946 resulted mainly from a decline in output of zinc-lead-silver ore from mines in the Coeur d'Alene region and to the after effects of a fire in December 1945 in the Sunshine mine, also in the Coeur d'Alene region. Large decreases in silver output were reported by the Sunshine Mining Co., Bunker Hill & Sullivan Mining & Concentrating Co., Federal Mining & Smelting Co. (Morning mine), operators of the Osburn tailing plant, Sherman Lead Co., Monitor Mining Co., Triumph Mining Co., Clayton Silver Mines, Tamarack & Custer Consolidated Mining Co., and Sullivan Mining Co. (Star mine); however, a marked increase was made at the Page mine of the Federal Mining & Smelting Co. and at the Yellow Pine mine of the Bradley Mining Co. Of the State total silver, zinc-lead ore and tailings yielded 53 percent, silver ore 40 percent, lead ore 4 percent; and gold ore, old slag, and lead-copper ore nearly all the remainder. The recovery of silver from silver ore decreased 970,800 ounces, and from zinc-lead ore 534,159 ounces, but the quantity from gold ore was more than double that in 1945.

The Coeur d'Alene region produced 87 percent of the State total silver in 1946; the remainder came largely from the Warm Springs, Bayhorse, Deadwood Basin, Yellow Pine, and Blue Wing districts.

Ten mines—the Sunshine, Polaris, Bunker Hill & Sullivan, Silver Dollar, Osburn tailing plant, Triumph, Page, Morning, Star, and Sweeny tailing dump—produced 75 percent of the State silver in 1946. All but the Triumph are in the Coeur d'Alene region.

The total production of silver in Idaho, in terms of recovered metal, from 1863 through 1946 has been 520,485,412 ounces valued at $359,031,993.

MONTANA

Montana lodes in 1946 yielded 42,521 fine ounces of gold and placers 27,986 fine ounces—a total of 70,507 ounces valued at $2,467,740—according to C. E. Needham and Paul Luff of the United States Department of the Interior, Bureau of Mines. Compared with 1945, this represents an increase of 199 percent from placers and 22 percent from lodes, or an over-all rise of 58 percent. This improvement in the industry, which brought State gold output in 1946 to the highest figure since 1942, resulted largely from the resumption of a number of dredge operations as well as from increased activity in lode gold mining.

Of Montana's total gold in 1946, 39 percent was derived from siliceous gold and silver ores (45 percent in 1945), 21 percent from base-metal ores (33 percent in 1945), and 40 percent from placers (22 percent in 1945). Ores concentrated yielded 20 percent of the State total gold; ores shipped to smelters nearly 17 percent; and ores treated at amalgamation and cyanidation mills (with or without concentrating equipment) almost 24 percent.

The leading gold producers in Montana in 1946 were the Jardine Mining Co. (gold ore) at Jardine; Winston Bros. (placer) in Jefferson County; Porter Bros. (placer) at Helena; McLaren Gold Mines (copper ore) in Park County; Anaconda Copper Mining Co. (copper ore and waste materials) at Butte and Anaconda; the Golden Sunlight mine (gold ore) near Whitehall; the Drumlummon mine (gold ore) at Marysville; H. & H. Mines (placer) in Granite County; Emigrant Dredging Co. (placer) in Park County; and the U. S. Grant mine (gold-silver ore) near Virginia City. These 10 producers furnished nearly 75 percent of the State total gold.

The total production of gold in Montana, in terms of recovered metal, from 1862 through 1946 has been 17,052,121 ounces valued at $381,277,447.

The output of recoverable silver in Montana in 1946 was 3,273,140 fine ounces valued at $2,644,697, which represents a decline of 2,668,930 ounces (45 percent) from the yield of 5,942,070 ounces in 1945. Most of the loss resulted from a decrease of 53 percent in the output of byproduct silver from the copper-producing operations of the Anaconda Copper Mining Co. at Butte and Anaconda.

Copper ore and tailings furnished 64 percent of the State total silver in 1946; zinc-lead ore, 21 percent; siliceous gold and silver ores, 14 percent; and lead ore and zinc ore, 1 percent. Ore treated at concentrating mills yielded 84 percent of the total silver, and smelting ore, 15 percent; old slag fumed, ores amalgamated or cyanided, and placers were minor sources.

The Anaconda Copper Mining Co., from its copper mines, mine and tailings dumps, slime ponds, zinc mines, and the North Butte and Flathead mines, supplied 67 percent of the State total silver in 1946, compared with 77 percent in 1945. Other leading silver producers were the U. S. Grant, the Emma & Ophir, and the Mike Horse mines.

The total production of silver in Montana, in terms of recovered metal, from 1862 through 1946 has been 749,149,823 ounces valued at $547,076,052.

NEVADA

Gold production in Nevada in 1946 was 2 percent below the total for 1945 and the lowest in quantity since 1895, whereas the output of silver was up 20 percent, according to Alfred L. Ransome, of the United States Department of the Interior, Bureau of Mines. A principal factor in the reduced gold output was the lower copper production in 1946; nevertheless nearly 50 percent of the total gold was derived from copper ore. The increase in silver production largely was due to increased prices not only for silver, but indirectly for lead and zinc; base-metal ores, other than copper ore, accounted for more than one-half the silver recovered in 1946.

The output of gold from Nevada ores, old tailings, and gravels in 1946 was 90,680 fine ounces valued at $3,173,800, compared with 92,265

ounces valued at $3,229,275 in 1945. Production of silver in 1946 was 1,250,651 fine ounces valued at $1,010,526, compared with 1,043,380 ounces valued at $741,959 in 1945.

Gold was recovered from the following sources: Copper ore, 48 percent; dry gold ore, 30 percent; placer gravel, 16 percent; zinc-lead ore, 4 percent; dry gold-silver ore, 1 percent; and all other ores, 1 percent. Metallurgical data show that 61 percent of the State lode gold was recovered by the smelting of concentrates, nearly 27 percent by cyaniding of ore and old tailings, 10 percent by the direct smelting of ore and old tailings, and a little more than 2 percent by amalgamation of ore.

The principal Nevada gold mines in 1946, listed by operating companies and in order of output were Kennecott Copper Corp. (Nevada Mines Division), White Pine County (copper ore); Consolidated Coppermines Corp., White Pine County (copper ore); Manhattan Gold Dredging Co., Nye County (connected-bucket dredge); Willow Creek Mines, Inc. and Consolidated Goldacres Co., Lander County (gold ore); Consolidated Chollar, Gould & Savage Mining Co., Storey County (gold ore); Copper Canyon Mining Co., Lander County (copper ore); Combined Metals Reduction Co. and Raymond Ely West Mining Co., Lincoln County (zinc-lead ore); Standard Cyaniding Co., Pershing County (gold ore); Gilded Age Mining Co., White Pine County (gold ore); and lessees of the Tonopah Divide Mining Co., Esmeralda County (gold ore).

Nevada lode silver was recovered from the following sources in 1946: Zinc-lead ore, 40 percent; copper ore, 23 percent; lead ore, 16 percent; dry gold ore and dry gold-silver ore, 7 percent each; dry silver ore, 5 percent; and zinc ore, 1 percent. Placer gravels washed primarily for gold yielded a small quantity of silver. Smelting of concentrates accounted for nearly 54 percent of the lode silver produced in Nevada in 1946, a little more than 40 percent recovered by direct smelting of ore and old tailings, and close to 6 percent came from cyanidation of ore and old tailings. A negligible quantity of silver was recovered by the amalgamation of ore.

The principal silver mines in Nevada in 1945, listed by operating companies and in order of output, were Combined Metals Reduction Co. and Raymond Ely West Mining Co., Lincoln County (zinc-lead ore); Kennecott Copper Corp. (Nevada Mines Division), White Pine County (copper ore); Bristol Silver Mines Co., Lincoln County (copper ore); McFarland & Hullinger, Elko County (lead ore); lessees of the Tonopah Mining Co., of Nevada, Nye County (gold-silver ore); Prince Consolidated Mining Co., Lincoln County (zinc-lead and gold-silver ores); Copper Canyon Mining Co., Lander County (copper ore); Consolidated Chollar, Gould & Savage Mining Co., Storey County (gold ore); Consolidated Coppermines Corp., White Pine County (copper ore); and Callahan Zinc-Lead Co., Eureka County (zinc-lead ore).

NEW MEXICO

The New Mexico mine production of recovered gold was 4,009 fine ounces valued at $140,315 in 1946, a decrease of 28 percent from 1945, according to S. A. Gustavson of the United States Department of the Interior, Bureau of Mines. Production of recovered silver was 338,000

fine ounces valued at $273,104, a decrease of 27 percent in quantity and 17 percent in value from 1945.

The decreased output of gold can be attributed to the suspension of operations from June to November by the Exploration Syndicate, Inc., at the Carlisle group of mines and the loss of about 3 months' production because of a labor strike at the American Smelting & Refining Co. Hanover Unit. Moreover, high labor and material costs hampered the reopening of gold mines. The principal gold-producing districts in 1946 were: Lordsburg, Hidalgo County, which produced 39 percent of the State total; Central, Grant County, 30 percent; Steeple Rock, Grant County, 10 percent; Mogollon, Catron County, 8 percent; and Pinos Altos, Grant County, 7 percent. Copper ore yielded 39 percent of the State total gold, dry and siliceous ores 34 percent, zinc ore 19 percent, and lead and zinc-lead ores and placers 8 percent.

Decreases in the production of silver in New Mexico can be attributed to the cessation in 1945 of operations of the Peerless mine, Grant County, and Tom mine group and Crosby mine, Hidalgo County; and to decreased production in 1946 from the Ground Hog Unit of the American Smelting & Refining Co., Hobo mine of the Black Hawk Consolidated Mines Co., Carlisle mine of the Exploration Syndicate, Inc.—all in Grant County—and the Bearup mine of the Silver Creek Mining Co., Catron County. The principal silver-producing districts in 1946 were: Central, Grant County, which produced 39 percent of the State total; Lordsburg, Hidalgo County, 30 percent; and Magdalena, Socorro County, 21 percent. Zinc ore yielded 41 percent of the State total silver output, copper ore 30 percent, zinc-lead ore 19 percent, dry and siliceous ores 9 percent, and lead ore 1 percent.

The total production of gold and silver in New Mexico, in terms of recovered metals, from 1848 through 1946 has been 2,182,835 fine ounces of gold valued at $49,733,418 and 67,754,731 fine ounces of silver valued at $52,945,198.

OREGON

Oregon gold production in 1946 increased 294 percent above the 1945 output, largely due to dredging operations, but the total recovered was only 16 percent of the all-time record set in 1940, according to Alfred L. Ransome, of the United States Department of the Interior, Bureau of Mines. Silver production decreased 34 percent compared with 1945.

The production of gold from Oregon ores and gravels in 1946 was 17,598 fine ounces, valued at $615,930, compared with 4,467 ounces valued at $156,345 in 1945. Placer mines produced 94 percent of the gold, and of the placer gold 84 percent was recovered by connected-bucket dredges, 12 percent by dragline dredges, 2 percent by hydraulicking, and 2 percent by all other methods. Lode mines produced 6 percent of the total gold; all lode gold was derived from dry and siliceous ores, most of which were valued principally for gold. Metallurgical data show that 67 percent of the total lode gold was recovered from the direct smelting of ore, 19 percent was as bullion from the amalgamation of ore, and 14 percent as bullion from the cyanidation of ore; no gold was recovered from flotation concentrate in 1946. The leading Oregon gold (and silver) produced in 1946

was the Sumpter Valley Dredging Co. (connected-bucket dredge), Sumpter dstrict, Baker County.

Oregon ores and gravels in 1946 yielded 6,927 ounces of silver, valued at $5,597, compared with 10,461 ounces, valued at $7,439 in 1945, a decrease of 34 percent in quantity and 25 percent in value. Of the State total, Baker County yielded nearly half, principally from gold dredging operations; dry gold ore was the principal source of lode silver and direct smelting the principal method of recovery.

SOUTH DAKOTA

The output in 1946 of gold and silver from lode gold mining, the principal source of mineral revenue in South Dakota, was valued at $10,998,861 in 1946, according to S. A. Gustavson of the United States Department of the Interior, Bureau of Mines. The production (in terms of recovered metals) was 312,247 fine ounces of gold valued at $10,928,645 and 86,901 fine ounces of silver valued at $70,216.

During 1946, five lode-gold mines were operated in the State, two continuously and three intermittently. No production from placer operations was reported.

The Homestake mine at Lead supplied 95 percent of the total value of the metals produced in the State. The mine was operated throughout the year at about half capacity, due chiefly to a shortage of underground workers. According to the Homestake Mining Co. annual report, 792,994 tons of ore were mined during the year and bullion with a value of $10,458,896.22 was produced. The Bald Mountain Mining Co. operated its mine at Trojan throughout 1946 and treated an average of 214 tons of ore per day. Production from this property was 13,739 fine ounces of gold and 33,109 fine ounces of silver valued at $507,617.

The total production of gold and silver, in terms of recovered metals, in South Dakota from 1876 through 1946 has been 21,046,301 fine ounces of gold valued at $518,217,744 and 9,688,009 fine ounces of silver valued at $6,900,058.

TEXAS

In terms of recovered metals, Texas mines in 1946 produced 9 fine ounces of gold valued at $315 and 42,922 fine ounces of silver valued at $34,681, according to S. A. Gustavson of the United States Department of the Interior, Bureau of Mines. This production was from five mines, three in Hudspeth County and two in Presidio County.

The Presidio mine, in Presidio County, operated by a lessee, accounted for 96 percent of the silver production of the State. The bulk of the gold production was from the Carr mine, also in Presidio County. The total production of gold and silver, in terms of recovered metals, from 1885 through 1946 has been 8,290 fine ounces of gold valued at $224,095 and 33,268,363 fine ounces of silver valued at $23,415,061.

UTAH

The mine production of gold in Utah in 1946 was 178,533 fine ounces (178,526 ounces from lodes and 7 ounces from placers), valued at $6,248,655, according to C. E. Needham and Paul Luff of the United

States Department of the Interior, Bureau of Mines. This represents a decline of 101,446 ounces, or 36 percent, from the output of 279,979 ounces in 1945. Copper ore continued to be the chief source of gold, supplying 75 percent of the State output; zinc-lead ore followed with 13 percent, and siliceous ore furnished most of the remainder. One placer was active in 1946.

The West Mountain (Bingham) district remained the leading State gold district in 1946, producing 79 percent of the State output. However, production was only 57 percent of that in 1945, mainly because of severe decreases at the Utah Copper mine and the United States & Lark group. The Tintic district, second in production, gained 22 percent in gold output, mainly as a result of a marked increase in output from the Tintic Bullion mine. The Park City region again was in third place and recorded an increase of 23 percent over 1945 output.

The Utah Copper mine was the leading State gold producer in 1946, followed in order by the New Park Mining Co. property (zinc-lead ore) in the Park City region, the Tintic Bullion mine (gold ore) in the Tintic district, the United States & Lark group (principally zinc-lead ore) and the National Tunnel & Mines Co. property (mainly copper ore) in the West Mountain (Bingham) district, the Calumet mine (zinc-lead ore) in the Rush Valley district, the Butterfield property (zinc-lead ore) in the West Mountain (Bingham) district, and the Tintic Standard mine (lead ore and siliceous ore) in the Tintic district. These eight properties produced 96 percent of the State gold in 1946.

The total production of gold in Utah, in terms of recovered metal, from 1864 through 1946 has been 10,642,978 ounces valued at $272,729,270.

The mine output of silver in Utah in 1946 was 4,118,453 fine ounces valued at $3,327,710, which represents a decline of 1,988,092 ounces, or nearly 33 percent, from the 1945 output of 6,106,545 ounces. Zinc-lead ore, zinc ore, lead ore, and lead-copper ore together contributed over 59 percent of the State total silver in 1946, copper ore 30 percent, and siliceous gold and silver ores 9 percent; the remainder came from old slag fumed.

The West Mountain (Bingham) district supplied 49 percent of the State silver in 1946, but production dropped from 3,628,229 ounces in 1945 to 2,030,182 ounces in 1946. The Park City region ranked second; yield dropped 2 percent from 1,033,830 ounces in 1945 to 1,009,422 ounces in 1946. In the Tintic district, the third leading silver-producing area in the State, output declined 43 percent from 1,086,435 ounces in 1945 to 619,724 ounces in 1946.

The Utah Copper mine remained well in the lead among State silver producers in 1946, followed by the United States & Lark group, the properties of the New Park Mining Co., Chief Consolidated Mining Co., Park Utah Consolidated Mines Co., Silver King Coalition Mines Co., and the Calumet mine. From these seven properties came 82 percent of the State silver.

The total production of silver in Utah, in terms of recovered metal, from 1864 through 1946 has been 719,172,519 ounces valued at $524,085,762.

WASHINGTON

The mine output of gold in Washington in 1946 was 51,168 fine ounces (57,860 ounces in 1945) valued at $1,790,880, according to C. E. Needham and Paul Luff of the United States Department of the Interior, Bureau of Mines. Lode mines produced 51,067 ounces ($1,787,345) and placer mines 101 ounces ($3,535).

The 12-percent decrease in the State yield of recoverable gold, compared with 1945, resulted in large part from a reduced output of gold from the Holden property of the Howe Sound Co. in Chelan County; the mine, however, remained the State's leading gold producer by a wide margin. The Knob Hill mine in Ferry County was the only other important producer; gold output from this property was 7 percent greater than in 1945. These two properties supplied over 96 percent of the State total gold in 1946. Placer mining was much more active in 1946 than in 1945; the quantity of gravel washed was 90 times greater than in 1945, but the quantity of gold recovered was only a little more than seven times greater. Over 63 percent of the State total gold was derived from zinc-copper ore, and nearly all the remainder came from siliceous gold ore.

The total producton of gold in Washington, in terms of recovered metal, from 1860 through 1946 has been 2,178,670 ounces valued at $55,008,773.

The mine output of silver in Washington in 1946 was 264,453 fine ounces valued at $213,678, a decline of 6 percent in quantity from the 281,444 ounces produced in 1945. Silver production in the State in 1946 remained entirely a byproduct of gold and base-metal ores. Again, the two leading silver producers were the Holden and Knob Hill mines, but in 1946 their positions were reversed, Knob Hill leading by a small margin. Neither company in 1946 maintained its 1945 level of silver output. The Kaaba mine in Okanogan County ranked third and increased its silver yield over 50 percent compared with 1945 output. These three properties furnished 86 percent of the State silver in 1946. Gold ore contributed nearly 40 percent of the State silver in 1946, zinc-copper ore 35 percent, zinc-lead ore 20 percent, lead ore 5 percent, and zinc ore, copper ore, and placers together less than 0.5 percent.

The total production of silver in Washington, in terms of recovered metal, from 1860 through 1946 has been 12,829,873 ounces valued at $9,109,513.

WYOMING

Wyoming mines produced (in terms of recovered metals) 105 fine ounces of gold valued at $3,675 and 26 fine ounces of silver valued at $21 in 1946, according to S. A. Gustavson of the United States Department of the Interior, Bureau of Mines. The operations at one lode mine and two placer mines in Albany County and two lode mines in Fremont County accounted for the production.

The total production of gold and silver in Wyoming, in terms of recovered metals, from 1867 through 1946 has been 78,041 fine ounces of gold valued at $1,839,763 and 74,692 fine ounces of silver valued at $51,797.

Distribution of gold and silver production of the United States, in fine ounces, for 1946, by sources of production (table furnished by the Bureau of Mines)

State	Gold			Silver		
	Lode mines	Placer mines		Dry and siliceous ores [1]	Lead ores [2]	Copper ores
		Floating connected bucket dredges	All other			
Alabama			1			
Alaska	6,073	148,834	71,874	34,797	6,996	
Arizona	78,626		398	166,106	1,338,101	1,764,558
California	87,052	244,679	25,093	97,529	1,228,386	16,736
Colorado	122,441	10,691	9,481	1,294,421	909,444	36,286
Georgia			21			
Idaho	22,852	17,448	2,675	2,726,184	3,763,834	1,086
Illinois					[3] 2,362	
Michigan						
Missouri						
Montana	42,521	21,609	6,377	458,284	69,401	
Nevada	75,894	13,091	1,695	248,691	732,535	2,082,321
New Mexico	3,999		10	29,826	712,259	289,701
New York					207,856	100,318
Oregon	1,096	13,793	2,709	6,870	15,786	
Pennsylvania	[4] 1,150					57

[1] Contains small quantity of silver from placer mines (78,250 fine ounces).
[2] Includes silver in lead, lead-copper, zinc, zinc-lead, zinc-copper and zinc-lead-copper ores.
[3] Includes silver from galena concentrates, a byproduct of fluorspar mining.
[4] From copper concentrates from magnetite-pyrite-chalcopyrite ores.

Silver legislation

Legislation pertaining to silver which was enacted during the calendar year 1946 is given herewith. Silver deposits at the mints and assay offices under this act were made at $0.905 per fine ounce, and silver sales were made at $0.91 per fine ounce.

[PUBLIC LAW 579—79TH CONGRESS]

[CHAPTER 718—2D SESSION]

[H. R. 4590]

AN ACT

To authorize the use by industry of silver held or owned by the United States, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That hereafter the Secretary of the Treasury is authorized to sell or lease for manufacturing uses, including manufacturing uses incident to reconversion and the building up of employment in industry, upon such terms as the Secretary of the Treasury shall deem advisable, to any person, partnership, association, or corporation, or any department of the Government, any silver held or owned by the United States at not less than 90.5 cents per fine troy ounce: *Provided*, That at all times

the ownership and the possession or control within the United States of an amount of silver of a monetary value equal to the face amount of all outstanding silver certificates heretofore or hereafter issued by the Secretary of the Treasury shall be maintained by the Treasury: *Provided further*, That hereafter each United States coinage mint shall receive for coinage silver mined after July 1, 1946, from natural deposits in the United States or any place subject to the jurisdiction thereof, as provided in the Act of July 6, 1939 (Public Law 165, Seventy-sixth Congress), and tendered to such mint within one year after the month in which the ore from which it is derived was mined, except that the seigniorage to be deducted shall be 30 per centum instead of 45 per centum as provided in section 4 (b) of said Act.

Approved July 31, 1946.

ADDENDA TO REPORT OF THE DIRECTOR OF THE MINT

ADDENDA TO REPORT OF THE DIRECTOR OF THE MINT

Bases Used for Mint Service Statistics

Gold and silver, as well as minor coinage metals, are accounted for by quantity as well as by value. Most of the published mint service statistics pertaining to such metals are on a primary quantity basis rather than a primary value basis because, in some degree, the value factor antedates the quantity factor, as when advance partial payments are made on large deposits of bullion or foreign coin pending determination by melt, assay, and computation, of the exact quantities and values of the materials deposited. The *quantity basis* comprises received bullion, the quantity and value whereof have been finally determined, whether or not paid for; also melted coin that has been reviewed and classified after having been received as withdrawn from monetary use. The *value basis* comprises received bullion, the quantity and value whereof have been finally determined, whether or not paid for; also received bullion to the value of advance payments thereon prior to making final determinations; and received but unreviewed coin that has been withdrawn from monetary use. To effect reconciliation between the quantity basis and value basis, from period to period, would require consideration also of prior period advances.

The tabulations of "Deposits and purchases" include received metal for which payment is made in bars bearing the Government stamp, as well as that paid for by check or in cash. In these tabulations, prior to the fiscal year 1940, the receipt classification item of "Domestic refinery bullion" included that refined from new production of both domestic and foreign mines, also old or secondary source metals, with inconsiderable amounts from small refineries that worked only old materials. Beginning with the fiscal year 1940 segregation of these items has been made in the tabulations.

Stock of domestic coin.—Consists of an estimate made in 1873 of gold and silver coin, the former of which was revised in 1907, with annual addition of new coinage and reported imports, and deduction of withdrawn coin, reported exports, and an estimate for industrial use and general disappearance; from 1928 to 1933 the additional factor of gold coin "earmarked," or set aside for foreign owners, was considered, such transactions being equivalent to exports and releases thereof being equivalent to imports. After 1933 gold coin has been omitted as such; any unmelted gold coin on hand is treated as bullion. In 1928 minor coin was added, considering only coins of the type commonly in circulation, the amounts coined, those withdrawn for recoinage, and general disappearance. The monetary stock tables for a series of years have been revised back to the establishing of the Federal Reserve System (1914) to include earmarked gold, and to include minor coin back to 1900. The item of coin withdrawn as used in the stock compilation omits the coin received for recoinage

but not yet reviewed, which coin is subject to classification adjustments.

Domestic coin made.—These data cover the coin delivered from the manufacturing department to the issuing (cash) division, and include the new coin made from withdrawn old coin, as well as all other newly made coin. It is now required that all coins be delivered to the cash division during the year impressed on such coins; during the earlier years this was not always done.

Deposits and purchases of foreign gold and silver bullion and coin, calendar years 1942–46.—For security reasons during World War II tabulations on the deposits and purchases of foreign gold and silver at the mints and assay offices according to the countries from which imported, were omitted from the Annual Reports. These data were published on a fiscal year basis for the fiscal years 1943–45 in the 1945 Report, pages 55–56, and for the fiscal year 1946 in the 1946 Annual Report. The tabulations following contain the same data on a calendar year basis for the calendar years 1942–46, the last published being for the calendar year 1941 in the 1942 Annual Report.

Deposits of foreign gold bullion and coin during the calendar year 1942

[1] For U. S. coinage by separate calendar years 1793–1943, see Annual Report for 1944, pp. 66–73; for years subsequent to 1943, see each succeeding Report.

[2] Coinage of domestic gold coin discontinued in 1933; sec. 5 of the Gold Reserve Act of 1934 provides in part as follows:

"No gold shall hereafter be coined, and no gold coin shall hereafter be paid out or delivered by the United States * * *. All gold coin of the United States shall be withdrawn from circulation, and, together with all other gold owned by the United States, shall be formed into bars of such weights and degrees of fineness as the Secretary of the Treasury may direct."

[3] Discontinued by act of Apr. 11, 1930.

[4] Discontinued by act of Sept. 26, 1890.

Authority for United States coinage, by denominations, with standard weight and fineness, and total coined

[1] *Composition—percent:*
5 and 3 cents (nickel)—copper, 75; nickel, 25.
5 cents (silver)—copper, 56; silver, 35; manganese, 9.
2 and 1 cent (bronze)—copper, 95; tin and zinc, 5.
1 and ½ cent (copper)—pure copper.
1 cent (nickel)—copper, 88; nickel, 12.
1 cent (zinc-steel)—steel, with obverse and reverse sides covered with a coating of not to exceed 0.001 inch zinc.
1 cent (copper-zinc)—copper 95; zinc 5.

[2] 5 cents (silver) coined, under provisions of act of Mar. 27, 1942, as amended by act of Dec. 28, 1945, from Oct. 1, 1942, until expiration of authority Dec. 31, 1945.
[3] 3-cents (nickel) discontinued by act of Sept. 26, 1890.
[4] 2-cents (bronze) discontinued by act of Feb. 12, 1873.
[5] Proclamation of the President in conformity with act of Mar. 3, 1795.
[6] Copper cent and half cent discontinued by act of Feb. 21, 1857.
[7] Nickel cent discontinued by act of Apr. 22, 1864.
[8] Zinc-steel cent coined, by orders of Secretary of the Treasury dated Dec. 23, 1942, and May 15, 1943, pursuant to act of Dec. 18, 1942, during calendar year 1943.
[9] Copper-zinc cent coined, by order of Secretary of the Treasury of Dec. 16, 1943, pursuant to act of Dec. 18, 1942, from Jan. 1944 until expiration of authority Dec. 31, 1946.
*For coinage by separate calendar years 1793–1943, see Annual Report for 1944, pp. 66–73; for years subsequent to 1943, see each succeeding Report.

Estimated stock of coin in the United States on June 30, 1947

Item	Silver coin	Minor coin	Total coin
Stock in the United States on July 1, 1946	$1,372,538,128	$325,977,935	$1,698,516,063
Coinage executed during fiscal year 1947	52,736,148	24,330,360	77,066,508
Net exports of United States coin during fiscal year 1947	405,339		405,339
Coin withdrawn from monetary use	1,933,555	250,596	2,184,151
Coin used in industrial consumption (estimated)	115,000		115,000
General revision	6,701,995	1,168,699	7,870,694
Stock in the United States on June 30, 1947	1,416,118,387	348,889,000	1,765,007,387

NOTE.—The number of standard silver dollars coined from 1878 to date was 847,629,915, which added to Hawaiin dollar coinage, 500,000 plus the number imported from the Philippine Islands, 150,000 and the number returned in Government transports, 496,859 equals 848,776,774. Since July 1, 1898, the number of standard silver dollars exported in transports have been 2,495,000; the net export from November 1919 to July 1920 in movement due to the high price of silver was 28,287,142; those melted under the terms of the Pittman Act of Apr. 23, 1918, total 270,232,722; unfit melted under act of Dec. 18, 1942, total 53,295,924, those melted otherwise (mutilated, etc.) since 1883 numbered 233,270 and the number of Hawaiian dollars melted to date was 455,329; the number sold for industrial use, 315,000 a total disposition of 355,314,387 leaving in the United States on June 30, 1947, 493,462,387 standard silver dollars and 922,656,000 dollars in subsidiary silver coin.

"General revision" includes adjustment of stock of subsidiary and minor coin for unreported disappearance such as undeclared exports, fire losses, and other general losses.

Estimated stock of domestic coin in the United States on Dec. 31, 1946

Item	Silver coin	Minor coin	Total coin

WORLD MONETARY STATISTICS

The statistics of foreign countries on production and coinage of gold and silver and stocks of money, published annually in the reports of the Bureau of the Mint, are obtained, so far as practicable, directly from the governments of such countries by the representatives of the United States accredited to them.

Interrogatories covering the points on which information is sought are sent yearly to the United States Ambassadors and Ministers through the Department of State, and the replies in the form of reports are forwarded directly to the Bureau of the Mint.

Receipts of replies to the interrogatories are frequently delayed in transmission, and the available data for the calendar year under review are often incomplete. In a general way interrogatory answers are herein published as received, with the addition of equivalents. If inaccuracies are apparent, information that would warrant the making of possible corrections is often unavailable.

In the absence of dependable official returns from foreign countries the most reliable data available are used in compiling world statistics.

A number of countries are omitted from the tables because of complete lack of information.

In connection with the table "*Monetary stock of principal countries of the world*"—the following general qualifications should be taken in consideration:

Gold stocks.—It is understood that material amounts of gold are not reported by several countries, such as amounts held in secret funds for stabilizing currencies, and those hoarded or held outside regularly reported stocks. Additional explanatory notes relating to the various countries accompany the table.

Silver stocks.—The amount of silver in circulation in many countries is not obtainable.

Minor coin.—Minor coin data, added to the table for the first time, are not available for some countries, and are incomplete in some instances where reported.

The table "Coinage of nations" is expanded to include minor coinage and the denominations and composition of all coins.

Monetary stock of principal countries of the world at the end of calendar year 1946 (subject to revision)

[Gold and silver converted to United States money (000 omitted); minor coin and paper currency stated in units of issuing countries (000 omitted). One United States dollar=15 5/21 grains of gold 9/10 fine; that is, an ounce of fine gold=$35]

Country	Name of unit	Average exchange rate for December 1946 (New-York rate when quoted)	Gold stock [See col. (9) for rates of conversion]			Monetary silver stock [See exchange rates, col. (2) for rates of conversion]	Minor coin [See col. (1) for name of unit of issuing country]	Notes in circulation [See col. (1) for name of unit of issuing country]	Rates of conversion of gold stock into United States dollars
			In central banks, government treasuries, and earmarked abroad	Other	Total gold

REPORT OF THE DIRECTOR OF THE MINT ON THE OPERATIONS OF THE MINT SERVICE FOR THE FISCAL YEAR 1951

ANNUAL REPORT OF THE DIRECTOR OF THE MINT

TREASURY DEPARTMENT,
BUREAU OF THE MINT,
Washington, D. C., August 28, 1951.

SIR: In compliance with the provisions of section 345 of the Revised Statutes of the United States, I have the honor to submit herewith a report covering the operations of the mints, assay offices, and bullion depositories of the United States for the fiscal year ended June 30, 1951, being the Seventy-ninth Annual Report of the Director of the Mint. There is also submitted for publication in connection therewith the annual report of this Bureau upon the production and consumption of the precious metals in the United States for the calendar year 1950.

OPERATIONS OF THE MINTS, ASSAY OFFICES, AND BULLION DEPOSITORIES

The principal functions of the Bureau of the Mint consist of the manufacture of domestic and foreign coins; the acquisition of gold and silver, payments for which are made on the basis of mint assays; the safeguarding of the Government's holdings of the monetary metals, including coins in processing stages until finished and issued; the refining of gold and silver; the administration of regulations pertaining to gold and silver, including the issuance of licenses for the acquisition, ownership, possession, use, and exportation of gold for industrial, professional, and artistic purposes; and the production of medals and other decorations.

The Office of the Director of the Mint in Washington administers all activities of the Bureau of the Mint. During the fiscal year 1951 seven field institutions were in operation: Coinage mints in Philadelphia, San Francisco, and Denver; assay offices in New York City and Seattle; the gold bullion depository in Fort Knox, Ky.; and the silver bullion depository in West Point, N. Y., which operates as an adjunct of the New York Assay Office. Electrolytic refineries are maintained at the San Francisco, Denver and New York City institutions. The Medal Department is located at the Philadelphia Mint. At the close of the fiscal year 1951 there were 966 employees in the departmental and field institutions compared with 943 at the beginning of the year.

Domestic coinage.—Production of United States coins during the fiscal year 1951 totaled 1,157,820,778 pieces with a value of $53,494,591, and a gross weight of 4,374 tons. Subsidiary silver coins consumed 30,954,961 fine ounces (1,061 tons) of silver. Minor coins consumed 2,990 tons of copper, 56 tons of nickel, and 148 tons

of zinc and tin. Production of each mint is shown in the following table.

United States coinage during the fiscal year 1951

Denomination	Philadelphia	San Francisco	Denver	Total value	Total pieces
SILVER (900 FINE)					
Half dollars:					
Regular	$3,466,108.00	$1,637,000.00	$3,469,800.00	$8,572,908.00	17,145,816
Commemorative: Booker T. Washington	30,006.50	6,002.00	6,002.00	42,010.50	84,021
Quarter dollars	7,305,237.00	2,996,001.00	7,702,100.00	18,003,338.00	72,013,352
Dimes	7,951,855.70	3,012,000.00	5,210,300.00	16,174,155.70	161,741,557
Total silver	18,753,207.20	7,651,003.00	16,388,202.00	42,792,412.20	250,984,746
MINOR					
Five-cent pieces (cupro-nickel)	504,571.60	388,800.00	1,148,901.50	2,042,273.10	40,845,462
One-cent pieces (bronze)	2,924,405.70	1,260,450.00	4,475,050.00	8,659,905.70	865,990,570
Total minor	3,428,977.30	1,649,250.00	5,623,951.50	10,702,178.80	906,836,032
Total domestic coinage	22,182,184.50	9,300,253.00	22,012,153.50	53,494,591.00	1,157,820,778

Foreign coinage.—Coins produced for four other governments during the fiscal year 1951 totaled 22,050,000 pieces with a metal content of 89 tons. Details are shown in the following table:

Coinage by the United States mints for other countries during the fiscal year 1951

Country and denomination	Composition	Gross weight per coin	Coinage by mint at—		
			Philadelphia	San Francisco	Total [1]
Dominican Republic:		*Grams*	*Pieces*	*Pieces*	*Pieces*
50 centavos	900 silver, 100 copper	12.5	200,000		200,000
10 centavos	do	2.5	500,000		500,000
5 centavos	75 copper, 25 nickel	5	2,000,000		2,000,000
1 centavo	95 copper, 5 zinc and tin	3	3,000,000		3,000,000
Total			5,700,000		5,700,000
El Salvador:

1 centavo	95 copper, 5 zinc	2.5		10,000,000	10,000,000
Total				13,000,000	13,000,000
Honduras:					
50 centavos	900 silver, 100 copper	6.25	500,000		500,000
20 centavos	do	2.5	1,500,000		1,500,000
10 centavos	75 copper, 25 nickel	7	1,000,000		1,000,000
Total			3,000,000		3,000,000
Syria:					
1 pound	900 gold, 100 copper	6.7585⅓	250,000		250,000
½ pound	do	3.3792⅔	100,000		100,000
Total			350,000		350,000
Grand total			9,050,000	13,000,000	22,050,000

[1] No coinage for other countries at the Denver Mint during the fiscal year.

Issue of domestic coins.—United States coins issued by the mints during the fiscal year totaled 1,531,094,198 pieces with a value of $76,339,255.27. Denominations were as follows:

Denomination	Number of pieces issued	Face value
Silver dollars	8,416,000	$8,416,000.00
Half dollars	29,095,785	14,547,892.50
Quarter dollars	77,240,517	19,310,129.25
Dimes	178,298,652	17,829,865.20
5-cent pieces	96,373,397	4,818,669.85
1-cent pieces	1,141,669,847	11,416,698.47
Total	1,531,094,198	76,339,255.27

Stock of coins.—The estimated stock of coins in the United States as of June 30, 1951 totaled $1,922,840,544, of which $492,248,551 were silver dollars, $1,041,945,901 were subsidiary coins, and $388,646,092 were minor coins.

Medals.—The number of service medals and other distinguishing devices delivered to the Department of Defense and other Government departments and agencies totaled 31,424 during the fiscal year 1951. In addition, there were 2,766 medals sold to the public.

Engraving department.—The number of coinage dies issued by the engraving department during the fiscal year totaled 6,960, of which 6,653 were domestic and 307 were foreign dies.

Bullion deposit transactions.—Bullion deposit transactions at the mints and assay offices totaled 10,148, including 23 intermint transfers during the fiscal year 1951. These transactions required a total of 15,656 assay determinations, including 1,123 determinations for intermint transfers.

Acquisitions of gold.—Deposits and purchases of gold during the fiscal year totaled $101,268,408.80 classified as follows:

[On quantity basis, see Bases Used for Mint Service Statistics]	*Value*
Purchases at $20.67+ per fine ounce	$1,624.67
Increment to $35 per fine ounce	1,124.69
Purchases at $35 per fine ounce	85,147,071.62
Domestic coin transferred (melted)	195,001.81
Intermint transfers	15,923,586.01
Total value at $35 per ounce	101,268,408.80

Acquisitions of silver.—During the fiscal year deposits and purchases of silver totaled 141,771,633 fine ounces, classified as follows:

[On quantity basis, see Bases Used for Mint Service Statistics]	*Number of fine ounces*
Newly mined domestic silver	38,070,247
Silver contained in gold deposits, etc	134,541
Silver received in exchange for Government-stamped bars	529,677
Recoinage bullion from uncurrent subsidiary coin	1,576,145
Recoinage bullion from uncurrent silver dollars	249,120
Intermint transfers of silver	209,293
Deposits of silver in trust by foreign governments	380,167
Redeposits [1]	100,622,443
Total	141,771,633

[1] Consists of Treasury stock previously held by certain agencies of the Federal Government.

Refinery production of gold and silver.—During the fiscal year the refineries produced 1,243,417 fine ounces of gold and 1,232,431 fine ounces of silver by the electrolytic process. In addition, 3,302,176 fine ounces of gold and 47,771 fine ounces of silver were subject to fire process only.

Issue bars manufactured.—The mints and assay offices manufactured a total of 34,160 issue bars containing 3,845,431 fine ounces of gold and a total of 1,756 issue bars containing 559,949 fine ounces of silver during the fiscal year.

Stock of unrefined bullion.—At the close of the fiscal year the stock of unrefined bullion at the mints and assay offices, in terms of the assayed fine metal content, amounted to 968 tons of gold and 570 tons of silver.

Monetization of silver bullion.—Silver certificates in the amount of $34,391,919 were issued by the Treasury during the fiscal year against 26,600,000 fine ounces of silver bullion valued at $1.29+ per fine ounce, the statutory monetary value of silver. Seigniorage, representing the difference between the cost and the monetary value of silver, amounted to $10,317,575.57.

Sales of gold for industrial use.—Sales of gold bars to licensed purchasers for industrial, professional, and artistic use totaled $86,345,449.53 during the fiscal year. Sales, by month, are shown in the following table:

[On value basis, see Bases Used for Mint Service Statistics]

Month	Value of gold bars issued	Month	Value of gold bars issued
1950:		1951:	
July	$4,837,253.37	January	$9,396,413.10
August	10,783,229.88	February	9,821,318.76
September	9,015,586.69	March	5,934,617.15
October	10,800,470.17	April	3,296,799.86
November	8,714,089.23	May	3,415,443.95
December	6,756,342.39	June	3,573,884.98
		Total	86,345,449.53

Sales of silver for industrial use.—Sales of silver at $0.91 per fine ounce under the act of July 31, 1946, amounted to 1,628,065 fine ounces during the year.

Stock of monetary bullion.—The United States stock of gold bullion held by the mint institutions totaled 621,594,567 fine ounces valued at $21,755,809,831 on June 30, 1951. On the same date the mint institutions held 1,260,490,640 fine ounces of silver bullion and, in addition, 79,151,820 fine ounces of silver bullion in special custody account for the Treasurer of the United States. This class of silver was formerly held by the Office of Reconstruction Finance Corporation, and is being melted and cast into regular mint bars.

Receipts and disbursements of gold bullion.—Receipts and disbursements of gold bullion during the fiscal year 1951, and balances on

hand June 30, 1951, as compared with June 30, 1950, are shown in the following table:

Institution	Balance on hand June 30, 1950	Receipts during fiscal year 1951 (details below) [1]	Total	Disbursements during fiscal year 1951 (details below) [1]	Balance on hand June 30, 1951
Philadelphia	$3,972,524.89	$5,021,343.46	$8,993,868.35	$4,951,917.69	$4,041,950.66
San Francisco	508,122,951.80	31,193,467.85	539,316,419.65	1,609,410.20	537,707,009.45
Denver	5,774,108,464.88	23,126,588.07	5,797,235,052.95	2,695,626.13	5,794,539,426.82
New York	5,460,274,999.63	30,859,252.56	5,491,134,252.19	2,555,673,938.85	2,935,460,313.34

Seattle		10,806,687.26		10,806,687.26
Fort Knox				
Total	2,557,681,333.20	15,921,980.49	2,134,266.44	2,575,737,580.13

Melting and refining and coining departments.—The operations of the melting and refining and of the coining departments of the three mints and the New York Assay Office are shown in the table following. The data are based upon the figures obtained at the settlements of the accounts for the fiscal year 1951. Legal limits of wastage on the whole amount delivered by the superintendent to the operative offices, as prescribed in section 3542 of the Revised Statutes, are as follows: Melter and refiner—gold, 0.001; silver, 0.0015; coiner—gold, 0.0005; silver, 0.001.

Operations of the melting and refining and of the coining departments, fiscal year 1951

Management Improvement Program.—The Bureau of the Mint for some years has been carrying on an active continuing program of appraisal and review of methods and practices followed in the several mint offices to assure that progress is maintained in the way of revising methods of operation and adopting new mechanisms as the practicability therefor becomes evident. This Management Improvement Program has been carried on by means of comprehensive cost accounting and performance appraisal, periodic production and progress reports, specific assignments designed to develop improvements, conferences of operating officials, appointment of special committees, and periodic inspections and surveys by capable persons of operations in all offices.

General employee interest, and enthusiasm for devising and effecting new and improved operational procedures, are continually stimulated through the use of special committees, cost reporting procedures, motion pictures of mint functions and of private industrial operations similar to those of the mint, showing of safety films, encouragement of the Cash Awards Program, and similar methods. A spirit of competition between mints, fostered through comparative cost statements and use of motion pictures, has produced a thorough cost consciousness on the part of officials, supervisors and workers with beneficial production economies.

Individual Management Improvement Committees have recently been formed in each of the large mint plants for the purpose of making a continuing survey and study of any operational problems that may exist with a view of determining means by which they may be solved. These Committees are wide-awake, earnest groups capable of devising and adopting more efficient operating methods wherever practicable. Monthly meetings are conducted with the intention of maintaining a lively current interest in this program. Members are requested to

attend meetings prepared to present and discuss operational problems in their plant, and also to appraise management reports from other mint institutions for the purpose of adopting established improvement measures from the other offices wherever practicable.

A conference of superintendents of the three mints and the New York Assay Office was held in the Director of the Mint's office during the month of March 1951. Operating problems common to all offices were discussed for the purpose of improving operations wherever possible. The conference covered all phases of operations in the several mint offices, including the Management Improvement Program, planning for any emergency, microfilming of records, use of motion pictures for employee training program, operational costs at each of the offices—by functions, adoption of more efficient methods where practicable, elimination of any unnecessary operations on a calculated risk basis, and numerous related subjects. At the conclusion of the conference, the superintendents of the western mints visited the Philadelphia Mint and the New York Assay Office and reviewed operations at those plants.

The area of greatest accomplishment potential in the Mint Service is in the coinage field. Mechanical and operational procedures employed in the three mints have been practically revolutionized during recent years. New types of equipment have not only been purchased, but also designed and constructed, and even invented, for increasing coinage output and reducing cost. These innovations are not limited to any individual plant, but due chiefly to space limitations and funding requirements, separate and unique mechanisms have been adopted at each production location.

The new type of melting and rolling equipment installed in the Denver Mint a few years ago, permitting substitution of a 400 pound bronze ingot for the former 6 pound standard size, has proved to be most successful as evidenced by substantial cost decreases for that denomination. During the past year, strip and coil annealing machinery required for processing nickel and silver with the new equipment, has been installed at Denver and experimental operations on processing of these alloys have been practically completed. Although the new type of equipment was designed primarily for bronze operations, it now appears highly probable that all future processing of silver and nickel alloys at that plant will be performed with the large melting and rolling equipment. Installation of a new type of coin blank annealing equipment was also completed at the Denver Mint during the past year. This equipment represents a definite improvement over a similar type installed recently at another mint plant, which resulted in a substantial cost decrease for that particular operation.

The new type of water cooled mold, invented by technicians at the Philadelphia Mint, was originally planned for operations on silver denominations. This mechanism has now been successfully redesigned and converted to operations on bronze and nickel alloys. Together with the adaptation of this invention to these alloys, a wider more efficient ingot has now been adopted permitting alleviation of physical strain on rolling room personnel and resulting in increased production from rolling and blanking operations.

At the San Francisco Mint, it was former practice to use small individual ingots for each coinage denomination. Due to difference in

plant layout, building structure and equipment location limitations, it was not feasible to adopt Philadelphia's new water-cooled mold device. However, a new type of water-cooled mold was designed and constructed, completely different from the old style but fashioned somewhat after the Philadelphia type. The new type universal mold is used for all ingots of varying alloys and denominations. Coincident with that development, rolling operations have been modified and improved resulting in greater output and lower operating costs for both the melting and coining divisions.

Economy measures and improvement actions have not been limited to the coinage field, but have also been extended to other mint activities. In addition to the examples of specific improvements in coinage operations given above, a great number of other efficiency measures have been adopted. A Management Improvement Committee, composed of representatives from five mint offices, was appointed in March 1949 to survey the large mint field offices and to recommend improved methods and procedures for all operations wherever practicable. Following an intensive and exhaustive survey of the several offices, the Management Committee made approximately 150 individual suggestions for improvements in all types of mint operations. A majority of these recommendations, many of which pertain to physical procedures involving equipment usage, have since been adopted, resulting in important operating economies.

Because of numerous involved complexities, it is difficult to measure exactly the monetary savings resulting from the many production economies effected. With regard to the coinage function, however, where unit costs are employed, a comparison of yearly unit costs can be employed to determine the effectiveness of established improvements. Average salaries in the Mint Service have increased approximately 73 percent during the past several years, (since the fiscal year 1946). The cost of producing coin could also have been expected to increase 73 percent, or more in view of steadily rising costs for supplies and materials, etc., unless the adopted Management Improvement measures had proven to be effective. Coinage production costs for the fiscal year 1951 actually show decreases as compared with 1946 costs. These factors are shown in the following table:

Denomination	Cost of coinage per 1,000 pieces [1]		
	A 1946 fiscal year actual coinage costs	B Costs at present if they had risen proportionately with rise in salaries (73 percent)	C 1951 actual costs representing an average decrease of 6 percent from 1946 costs
1 cent	$1.59	$2.75	$1.21
5 cents	2.81	4.86	3.22
10 cents	2.12	3.67	2.10
25 cents	5.10	8.82	4.51
50 cents	8.25	14.27	7.59
Cost to produce 1,000 coins of each denomination	19.87	34.37	18.63

[1] Savings of approximately $2,078,000 are indicated by computing coinage costs at "B" rates and comparing with costs shown under "C" for actual coinage in fiscal 1951.

The Improvement Program of the Bureau of the Mint has also been extended to non-operational areas. A thoroughgoing survey and study was recently completed of the mint's general accounting procedures in conjunction with the Government-wide Joint Accounting Improvement Program. Improved procedures tending to strengthen the accounting and reporting structure were effected wherever possible. At the conclusion of this survey, the mint's General Accounting Manual was revised and rewritten. Accounting studies are continuing in other mint accounting fields, namely, Bullion and Monetary Accounting and Cost Accounting, and those accounting procedures will be thoroughly reexamined with consideration being given to revision and improvement of the Accounting Manuals for those two distinct types of accounting.

Annual Assay Commission of 1951.—Section 3547 of the Revised Statutes of the United States provides for an annual test of the domestic coinage executed during each calendar year by a commission of whom part are ex officio members, the others, who serve without compensation, being appointed by the President. The purpose is to secure a due conformity in the silver coins to their respective standards of fineness and weight. The Commission, which met at the Philadelphia Mint February 14 and 15, 1951, reported the following results of their examination of the 1950 coinage:

Annual assay coins reserved at various mints during the calendar year 1950

Denomination	Philadelphia		Denver		San Francisco	
	Pieces	Value	Pieces	Value	Pieces	Value
Half dollars	830	$415.00	826	$413.00	59	$29.50
Quarter dollars	2,562	640.50	2,134	533.50	1,031	257.75
Dimes	5,051	505.10	4,682	468.20	2,044	204.40
Total	8,443	1,560.60	7,642	1,414.70	3,134	491.65

REPORT OF THE COMMITTEE ON COUNTING

The committee on counting reports that the packages said to contain the pieces reserved by the several mints for the trial of coins, in accordance with Title 31, Section 352, United States Code, were delivered to us by the Superintendent of the Mint at Philadelphia.

Verification of the coins reserved was made by checking same against the original record of coin deliveries and reservations for assay in respect to the mint at Philadelphia, and against transcripts furnished the committee showing reservations for assay from the mints at Denver and San Francisco.

At random we selected from the deliveries a certain number of packages, and it was the intention of the committee to include all denominations. Of the packages selected, the coins contained therein were counted, and the number of coins contained in each envelope is noted in tables for each mint.

REPORT OF THE COMMITTEE ON WEIGHING

The committee on weighing reports that it selected at random a total of 52 coins, consisting of 30 coins from the Philadelphia Mint, 12 coins from the Denver Mint, and 10 coins from the San Francisco Mint. These coins were taken from 40 different deliveries and are believed to be adequately representative of the year's coinage of each mint.

The coins were weighed directly against weights from the set of coin and grain weights regularly reserved for the use of the Commission. This set was delivered under seal of the National Bureau of Standards, and was accompanied by a

certificate from the Bureau showing that the errors of all weights of the set were negligible.

Weighings were made with a precision of 0.01 grain on a balance, the sensitiveness, accuracy and reliability of which was tested and found adequate before the beginning of the work on February 14, and again on the morning of February 15.

It is to be noted that the weight of each coin was well within the tolerance allowed by law.

The following table shows the maximum deviation of the heaviest and lightest coins of the denominations set forth below, as found from individual weighings:

Denomination	Legal deviation allowed	Actual deviation					
		Philadelphia		Denver		San Francisco	
		Heavy	Light	Heavy	Light	Heavy	Light
1950	*Grains*	*Grains*	*Grains*	*Grains*	*Grains*	*Grains*	*Grains*
Half dollars	4.00	0.75	0.95	0.82	0.00	1.21	0.23
Quarter dollars	3.00	1.05	.98	.70	.20	.37	.35
Dimes	1.50	.24	1.05	.80	.80	.12	.15

REPORT OF THE COMMITTEE ON ASSAYING

In compliance with Title 31, Section 363, United States Code, the committee on assaying is pleased to report that the assays have been completed on samples taken from different lots of coin, representing all denominations of silver coined during the calendar year 1950, by the United States mints at Philadelphia, Denver and San Francisco.

No gold was coined at any of the mints during the year.

The results of assays on individual coins and mass melts of coins are satisfactory, being well within the limits of tolerance, which is six one-thousandths for silver coins.

The highest and lowest assay on an individual coin from each of the three mints is as follows:

	Fineness	
	Highest	*Lowest*
Philadelphia	901. 1	898. 2
Denver	900. 6	898. 6
San Francisco	900. 2	898. 6

Result of mass melting

	Fineness
Philadelphia	899. 5
Denver	899. 3
San Francisco	899. 5

The assay balances were tested and found to be in adjustment. The nitric acid used for assaying was found to be free of chlorine and the weights used for weighing the samples for assay were checked against a set that had been standardized by the National Bureau of Standards and delivered to the Commission by their representative.

Production and consumption of gold and silver in the United States.—During the calendar year 1950 the total production of gold and silver refined from ores mined in the several States and Alaska was as follows: Gold—2,288,708 fine ounces valued at $80,104,780; and silver—42,308,739 fine ounces.

Gold issued for use in the industrial arts in the United States during the calendar year 1950 aggregated $134,587,773, with a return from industrial use of secondary materials, including old jewelry, plate, scrap, etc., amounting to $36,742,020, giving a net consumption of gold amounting to $97,845,753 during the year.

Silver issued for use in industry and the arts in the United States during the calendar year 1950 aggregated 155,257,340 fine ounces, with a return from industrial use of secondary materials including old silverware, scrap, etc., amounting to 45,257,340 fine ounces, giving a net consumption of silver amounting to 110,000,000 fine ounces during the year.

Detailed tables on production and consumption appear in the next section of this Report.

Personnel of the Bureau of the Mint.—The number of employees assigned to various functions of the Bureau of the Mint on June 30, 1951, compared with June 30, 1950, is shown in the following table.

Bureau of the Mint	Established under act of—	Number of employees									Total	
		General	Coining	Melting and refining	Deposits	Guard force	Mechanical	Engraving	Assaying	Custodial force	June 30, 1951	June 30, 1950

Total, June 30, 1950	----	194	180	159	56	163	102	11	41	37	----	943

The foregoing report, covering the operation of the mints, assay offices, and the bullion depositories of the United States for the fiscal year ended June 30, 1951, is respectfully submitted.

NELLIE TAYLOE ROSS,
Director of the Mint.

HON. JOHN W. SNYDER,
Secretary of the Treasury.

REPORT OF THE DIRECTOR OF THE MINT ON THE PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES FOR THE CALENDAR YEAR 1950

REPORT ON PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES FOR THE CALENDAR YEAR 1950

INTRODUCTION

The official estimate of production of gold and silver in the United States, made by the Bureau of the Mint, is based upon arrivals at United States mints and assay offices and at privately owned refineries. The mints and assay offices determine the State source of all newly mined unrefined material at the time deposits are received. The State source of material received by privately owned refineries is determined from information submitted by them and by intervening smelters, mills, etc., involved in the reduction processes.

The estimated industrial consumption of gold and silver is based upon issues by mints and assay offices, private refiners, dealers and manufacturers, plus an estimate of domestic coin melted for industrial use. From the total thus calculated there is deducted the old jewelry, plate, scrap, etc., received by the same concerns, giving net materials consumed.

Gold production.—A total of 2,288,708 fine ounces of gold valued at $80,104,780 was produced from ores mined in 16 states and the Territory of Alaska during the calendar year 1950. This represented an increase over the calendar year 1949 of 19 percent for the United States as a whole, with 11 states and Alaska accounting for the increase. South Dakota was again the State of leading production, followed by California, Utah, Alaska, Nevada, Colorado, and Arizona. A state by state comparison of output for the calendar years 1949 and 1950 is shown in the following tabulation:

Production of gold mined in the several States and Territory of Alaska (based upon arrivals at United States mints and assay offices and at private refineries)

State in which mined	Calendar year 1949		Calendar year 1950		Increase or decrease (−) in 1950	
	Fine ounces	*Value* [1]	*Fine ounces*	*Value* [1]	*Fine ounces*	*Percent* [2]
Alaska	226,666	$7,933,310	275,529	$9,643,515	48,863	21.6
Arizona	109,476	3,831,660	110,733	3,875,655	1,257	1.1
California	405,256	14,183,960	409,776	14,342,160	4,520	1.1
Colorado	101,685	3,558,975	124,053	4,341,855	22,368	22.0
Georgia	6	210				
Idaho	67,411	2,359,385	69,336	2,426,760	1,925	2.9
Montana	47,390	1,658,650	56,786	1,987,510	9,396	19.8
Nevada	124,697	4,364,395	169,576	5,935,160	44,879	36.0
New Mexico	8,004	280,140	6,574	230,090	−1,430	−17.9
North Carolina	13	455				
Oregon	14,862	520,170	10,361	362,635	−4,501	−30.3
Pennsylvania	1,721	60,235	2,051	71,785	330	19.2
South Dakota	454,534	15,908,690	571,834	20,014,190	117,300	25.8
Tennessee	176	6,160	106	3,710	−70	
Texas	65	2,275	55	1,925	−10	
Utah	300,022	10,500,770	392,289	13,730,115	92,267	30.8
Vermont	120	4,200	140	4,900	20	
Washington	59,598	2,085,930	89,413	3,129,455	29,815	50.0
Wyoming	247	8,645	96	3,360	−151	
Total	1,921,949	67,268,215	2,288,708	80,104,780	366,759	19.1

[1] Gold valued at $35 per fine troy ounce.
[2] Percentage change not calculated for States with lower output.

The grand total production of gold in the United States and its possessions since 1792 amounts to 284,376,445 fine ounces with a value of $6,673,706,670. For a summary of production for the calendar years 1792–1943, see page 36 of the *Annual Report of the Director of the Mint for the Fiscal Year Ended June 30, 1944*, and for later years each succeeding annual report.

Silver production.—A total of 42,308,739 fine ounces of silver was produced from ores mined in 21 states and the Territory of Alaska during the calendar year 1950. Idaho was again the state of leading production, followed by Montana, Utah, Arizona, Colorado, Nevada, and California. These 7 states accounted for 97 percent of the total production. Total production for the United States increased 21 percent over the previous year. A state by state comparison of the 1949 and 1950 production is shown in the following tabulation:

Production of silver mined in the several States and Territory of Alaska (based upon arrivals at United States mints and assay offices and at private refineries)

State in which mined	Calendar year 1949		Calendar year 1950		Increase or decrease (—) in 1950	
	Fine ounces	*Value* [1]	*Fine ounces*	*Value* [1]	*Fine ounces*	*Percent* [2]
Alaska	42,451	$38,420	50,471	$45,679	8,020	18.9
Arizona	4,977,719	4,505,087	5,089,067	4,605,863	111,348	2.2
California	792,922	717,634	1,000,315	905,336	207,393	26.2
Colorado	2,852,449	2,581,610	3,342,669	3,025,284	490,220	17.2
Georgia	1,707	1,545				
Idaho	9,921,891	8,979,812	15,993,035	14,474,504	6,071,144	61.2
Illinois	2,176	1,969	6,882	6,229	4,706	
Michigan	2,000	1,810	420	380	—1,580	
Missouri	58,255	52,724	233,166	211,027	174,911	300.2
Montana	6,706,780	6,069,975	7,177,665	6,496,149	470,885	7.0
Nevada	1,878,498	1,700,136	1,634,222	1,479,053	—244,276	—13.0
New Mexico	516,300	467,278	365,007	330,350	—151,293	—29.2

Oregon	14,154	12,810	11,944	10,810	—2,210	—15.6
Pennsylvania	11,331	10,255	10,527	9,527	—804	
South Dakota	105,479	95,464	142,863	129,298	37,384	35.4
Tennessee	43,291	39,181	26,139	23,657	—17,152	—39.6
Texas	5,126	4,639	3,553	3,216	—1,573	
Utah	6,574,299	5,950,073	6,798,701	6,153,168	224,402	3.4
Vermont	27,441	24,835	27,861	25,216	420	1.5
Virginia	53	48	177	160	124	
Washington	404,823	366,385	357,918	323,934	—46,905	—11.6
Wyoming	32	29	2,849	2,578	2,817	
Total	34,944,554	31,626,586	42,308,739	38,291,545	7,364,185	21.1

[1] Valued at $0.905+ per fine ounce, the purchase price of the Treasury for newly mined domestic silver, in accordance with the act of July 31, 1946.
[2] Percentage change not calculated for States with lower output.

The grand total production of silver in the United States and its possessions since 1792 amounts to 4,067,186,773 fine ounces. For a summary of production for the calendar years 1792–1943, see page 36 of the *Annual Report of the Director of the Mint for the Fiscal Year Ended June 30, 1944*, and for later years, each succeeding annual report.

Gold and silver consumption.—During the calendar year 1950 the United States mints and assay offices, private refiners, and dealers in the United States issued for industrial, professional, and artistic use, gold in the amount of $97,845,753, and silver in the amount

of 110,000,000 fine ounces. Details are shown in the following statement:

Item	Gold	Silver
	Value [1]	*Fine ounces*
Government-stamped bars issued by mints and assay offices	$80,383,098	[2] 529,166
Bullion in various forms issued by private refiners and dealers	54,204,675	154,650,830
United States coin (estimated)		77,344
Total amount of material issued	134,587,773	155,257,340
Old jewelry, plate, scrap, etc., returned to private refiners, dealers, and to monetary use	36,742,020	45,257,340
Net amount of material issued	97,845,753	110,000,000

[1] Gold valued at $35 per fine ounce.
[2] There were no sales of silver under authority of the act of July 31, 1946, during the calendar year 1950.

The value of fine gold bars issued monthly in exchange for cash for industrial, professional, and artistic use, by the United States mints and assay offices, during the calendar year 1950, was as follows:

[On value basis, see Bases Used for Mint Service Statistics]

1950	Value of gold bars issued	1950	Value of gold bars issued
January	$7,106,230.21	July	$4,837,253.37
February	5,978,765.96	August	10,783,229.88
March	4,414,414.39	September	9,015,586.69
April	3,635,490.33	October	10,800,470.17
May	2,818,062.61	November	8,714,089.23
June	5,523,162.72	December	6,756,342.39
		Total	80,383,097.95

REVIEW OF GOLD AND SILVER MINING INDUSTRY

A review of the gold and silver mining industry in the various States and Alaska for the calendar year 1950, for which acknowledgment is made to the Bureau of Mines, United States Department of the Interior, follows. It should be noted that production figures stated therein are based on a mine canvass of recoverable metal and, due principally to the time lag involved before this material reaches the mints and assay offices and private refineries, will not necessarily agree, on a yearly basis, with the figures published by the Bureau of the Mint.

ALASKA

Gold output in Alaska in 1950—following a 2-year decline—increased to the highest point since 1942. The recorded production of 289,272 fine ounces (in terms of recoverable metal) valued at $10,124,520 was 26 percent above the total for 1949, according to Alfred L. Ransome, Juneau Office, Bureau of Mines, Region I, United States Department of the Interior. Silver production of 52,638 fine ounces valued at $47,640 was 46 percent above the output in 1949. Comparative production (and value) in 1949 was: Gold, 229,416 ($8,029,560); and silver, 36,056 ($32,633).

The surprising gain in the recorded production of gold was accomplished despite the fact that a smaller number of men was employed at 11 lode and 216 placer operations in 1950 compared with 18 and 223, respectively, in 1949. An unusually dry season in the Territory resulted in a cessation of activity at a number of operations and curtailment at others in several districts in the Yukon River Basin and Seward Peninsula regions. Adverse economic conditions continued to harass the industry, and the gain in gold output was the result of increased production from a few of the larger operations, particularly those using bucket-line dredges, and to an over-all greater efficiency in labor and equipment at many of the operations using mechanical methods of placer mining. The sale of unprocessed or "natural" gold on the open market at prices in excess of the U. S. Treasury price of $35 per fine ounce was considerably less in volume than in 1949. The recorded production for 1950 includes 5,461 fine ounces of gold contained in natural gold sold on the open market. Specific and accurate data regarding natural gold sales are not readily obtained. From available information it can be assumed that natural gold originating from Alaskan mines and sold in 1950 was substantially less than the estimated 22,000 ounces sold in 1949, which total is probably higher than the actual figure.

The greatest proportion of gold came from a relatively few mines; the leading 15 gold-producing mines (14 placer and 1 lode) in 1950 yielded 76 percent of the total recorded gold output. The five principal producers, which accounted for 62 percent of the total Alaska output of gold, were in order of output: United States Smelting, Refining & Mining Co., Fairbanks Unit, Fairbanks district (bucket-line dredges); United States Smelting, Refining & Mining Co., Nome Unit, Nome district (bucket-line dredges); New York-Alaska Gold Dredging Corp., Tuluksak-Aniak district (bucket-line dredges); Brinker-Johnson Co., Fairbanks district (bucket-line dredge); and Alaska Pacific Consolidated Mining Co., Independence mine, Willow Creek district (gold ore).

Of the silver produced in Alaska in 1950, 76 percent was a byproduct of gold mining, and 24 percent came from lead ore. The most important producer of silver in 1950 was the United States Smelting, Refining & Mining Co. which recovered silver as a byproduct of bucket-line dredging operations in the Fairbanks district, Yukon River Basin region, and the Nome district, Seward Peninsula region.

ARIZONA

Gold production in Arizona in 1950 was 118,313 fine ounces valued at $4,140,955, a 9-percent gain over the output of 108,993 fine ounces in 1949 valued at $3,814,755, according to Paul Luff of the United States Department of the Interior, Bureau of Mines. Most of the gold, as well as silver, produced in the State is a byproduct

of copper ore and zinc-lead ore, and in 1950 these two classes of ore yielded 103,311 ounces of gold (87 percent of the State total) compared with 99,164 ounces in 1949. Copper ore yielded 79,567 ounces of gold (78,735 ounces in 1949); zinc-lead ore, 23,744 ounces (20,429 ounces in 1949); zinc-copper ore, 6,334 ounces (4,336 ounces in 1949); lead ore, 4,685 ounces (1,710 ounces in 1949); siliceous ores, 3,756 ounces (3,081 ounces in 1949); and zinc ore, 85 ounces.

The quantity of gold recovered from lode mines increased from 108,428 ounces in 1949 to 118,171 ounces in 1950, but that from placers declined from 565 ounces to 142 ounces. Concentrates smelted yielded 95,650 ounces of gold; crude ore smelted, 22,336 ounces; and ore amalgamated, 185 ounces.

About 80 percent of the State gold in 1950 came from six districts—Ajo, Big Bug, Copper Mountain (Morenci), Pioneer (Superior), Verde (Jerome), and Warren (Bisbee). The output from these districts increased from 96,498 ounces in 1949 to 104,144 ounces in 1950. The New Cornelia mine of the Phelps Dodge Corp., Pima County, continued to be the leading gold producer in Arizona. It was followed by the Iron King mine, Yavapai County; the Magma mine, Pinal County; the Copper Queen (Bisbee) branch of the Phelps Dodge Corp., Cochise County; the Morenci branch of the Phelps Dodge Corp., Greenlee County; and the United Verde branch of the Phelps Dodge Corp., Yavapai County. These six properties, all copper mines except the Iron King and part of the Copper Queen, produced 88 percent of the State total gold.

The total gold production in Arizona, in terms of recoverable metal, from 1860 through 1950 has been 11,300,812 ounces valued at $283,023,575.

The output of recoverable silver in Arizona in 1950 was 5,325,441 fine ounces valued at $4,819,793, an increase of 7 percent in quantity and value compared with the 1949 output of 4,970,736 fine ounces valued at $4,498,767. An increase in production of silver from copper ore in 1950 prevented a decline in the State silver output. In 1950 copper ore and zinc-lead ore yielded 4,459,176 ounces of silver (84 percent of the State total) compared with 4,332,989 ounces in 1949. Copper ore yielded 2,853,599 ounces of silver, an increase of 441,240 ounces (18 percent) over 1949, and zinc-lead ore 1,605,577 ounces, a decrease of 315,053 ounces (16 percent). Siliceous ores yielded 441,839 ounces of silver (328,295 ounces in 1949); zinc-copper ore, 354,302 ounces (198,089 ounces in 1949); lead ore, 51,122 ounces (76,822 ounces in 1949); and zinc-lead-copper ore, zinc ore, and lead-copper ore, 19,002 ounces. Concentrates smelted yielded 4,036,319 ounces of silver; crude ore smelted, 1,289,047 ounces; and ore amalgamated, 75 ounces.

About 75 percent of the State total silver in 1950 came from six districts—Ajo, Big Bug, Copper Mountain (Morenci), Pioneer (Superior), Verde (Jerome), and Warren (Bisbee). The output from these districts increased from 3,736,594 ounces in 1949 to 3,994,546 ounces in 1950. The Phelps Dodge Corp., with a slightly higher output than in 1949, continued to be the chief silver producer in Arizona; its four properties (Copper Queen, Morenci, New Cornelia, and United Verde) produced 52 percent of the State silver output in 1950. Other large silver producers were the Iron King, Magma, Ash Peak, San Xavier (Eagle-Picher Mining & Smelting Co.), Flux, St. Anthony, and Ray (Kennecott Copper Corp.) properties.

The total silver production in Arizona, in terms of recoverable metal, from 1860 through 1950 has been 312,390,415 ounces valued at $235,096,679.

CALIFORNIA

California gold yield in 1950, following the diminishing trend begun in 1948, dropped one percent below the 1949 output owing to decreases at both lode and placer mines, according to R. B. Maurer of the United States Department of the Interior, Bureau of Mines, whereas silver, reflecting the expanded base-metal output in 1950, rose 37 percent over 1949.

The maximum monthly production of gold for 1950, 40,723 ounces, was recorded in March. The low monthly output of 29,547 ounces in November resulted largely from reduced yield at placer mines under flood conditions.

The production of recoverable gold from California ores, gravels, and re-treated tailings in 1950 was 412,118 fine ounces (including a relatively small quantity in "natural" gold and amalgam sold at premium prices) valued at $14,424,130 compared to 421,473 fine ounces valued at $14,603,085 in 1949. In 1950, 243 lode mines produced 163,815 ounces of gold valued at $5,733,525 and 186 placer mines produced 248,303 ounces of gold valued at $8,690,605. Placer mines supplied 60

percent and lode mines 40 percent of the total gold in 1950, the ratio remaining unchanged compared to 1949.

Of the gold derived from lode operations, 95 percent was recovered from gold ore, 3 percent from lead ore, and the remainder from copper ore, zinc ore, zinc-lead ore, gold-silver ore, silver ore, and lead-copper ore. Metallurgical data show that 66 percent of the lode gold in 1950 (59 percent in 1949) was recovered by amalgamation of ore and old tailings, 28 percent (33 percent in 1949) by cyanidation of ore, concentrates, and old tailings, 3 percent (5 percent in 1949) by smelting of concentrates, and 3 percent (3 percent in 1949) by smelting ore and old tailings.

The yardage of material washed at placer mines decreased 1 percent, and the output of placer gold dropped almost 1 percent in 1950. Lode gold production decreased nearly 2 percent whereas tonnage of material treated increased 11 percent.

In the following data on placer mining, 1949 figures are given in parentheses. Floating dredges of the bucket-line type washed 82,514,000 (83,571,900) cubic yards of gravel and recovered 223,164 (226,838) ounces of gold valued at $7,810,740 ($7,939,330) or 90 (91) percent of the placer gold produced in the State in 1950. Dragline dredges—those having a floating washing plant to which gravel is delivered by a dragline excavator—washed 3,433,300 (2,906,600) cubic yards of gravel which yielded 15,499 (14,616) ounces of gold valued at $542,465 ($511,560). Nonfloating washing plants, to which gravel was delivered by mechanical means, washed 123,000 (256,500) cubic yards of gravel and recovered 3,293 (3,452) ounces of gold valued at $115,255 ($120,820). Hydraulic mines produced 1,468 (1,587) ounces of gold valued at $51,380 ($55,545) from 383,400 (447,900) cubic yards of gravel. Drift mining accounted for 443 (95) ounces of gold valued at $15,505 ($3,325) from 9,500 (1,500) cubic yards of gravel and suction dredging produced 1,407 (1,364) ounces of gold valued at $49,245 ($47,740) from 263,300 (267,000) cubic yards of gravel. Small-scale, hand operated equipment, including small sluice boxes, long toms, dip boxes, rockers, pans, and dry washers, was used to produce 3,025 (2,576) ounces of gold valued at $106,015 ($90,860).

Owing largely to lode mining, Nevada County ranked first among the California gold-producing counties in 1950. Sacramento County was second, due to the productivity of bucket-line dredges. Yuba County in third place principally from bucket-line dredging was followed by Amador County, largely from lode mining, and Butte County, which derived almost all the 1950 gold production from bucket-line dredging.

The principal gold producers in California in 1950, listed by operators in order of output were: The Natomas Co., Sacramento County (dredge), Yuba Consolidated Gold Fields (Yuba Unit), Yuba County (dredge), and Idaho Maryland Mines Corp., Nevada County (gold ore).

Production of silver from California ores, gravels, and retreated tailings in 1950 was 1,071,917 fine ounces valued at $970,139 compared with 783,880 fine ounces valued at $709,451 in 1949. Of the lode silver, 44 percent was derived from lead ore, 42 percent from zinc-lead ore, 5 percent from zinc ore, 5 percent from gold ore, nearly 3 percent from copper ore and more than 1 percent from gold-silver ore, silver ore, and lead-copper ore, together. A small quantity of silver was recovered as a byproduct of dredging and other placer methods carried on principally for gold. Smelting of concentrates supplied 59 percent of the lode silver recovered in the State, smelting of ore and old tailings 36 percent, cyanidation of ore, concentrates and old tailings 3 percent, and amalgamation of ore and old tailings 2 percent.

The principal silver producers in California in 1950, listed by operators in order of output were: Anaconda Copper Mining Co. (Darwin group), Inyo County (zinc-lead ore and lead ore), Anaconda Copper Mining Co. (Shoshone group), Inyo County (lead ore), and Coronado Copper & Zinc Co., Shasta County (zinc ore).

COLORADO

Mines in Colorado produced 130,390 fine ounces of gold valued at $4,563,650 in 1950 compared with 102,618 ounces valued at $3,591,630 in 1949, according to A. J. Martin of the United States Department of the Interior, Bureau of Mines. Silver production in 1950 totaled 3,492,278 fine ounces worth $3,160,688 compared with 2,894,886 ounces worth $2,620,018 in 1949. Gold production increased sharply in the Upper San Miguel, Leadville, and Animas lode districts and the Alma-Fairplay placer district; these four districts together contributed 78 percent

of the State total gold in 1950 and 71 percent in 1949. The larger silver-producing districts, in order of rank, were Upper San Miguel, Red Cliff (Battle Mountain), Animas, Creede, and Leadville, which together produced 74 percent of the State total silver in 1950 and 63 percent in 1949.

The leading gold-producing properties, in order of rank, were: Smuggler Union-Montana group (Telluride Mines) at Telluride, Treasury Tunnel-Black Bear (Idarado) in San Miguel County, Resurrection at Leadville, South Platte Dredging Co. dredge near Fairplay, and Shenandoah-Dives group near Silverton. The leading silver producers were the Eagle mine in Eagle County, Treasury Tunnel-Black Bear (Idarado) group in San Miguel County, Shenandoah-Dives group near Silverton, Emperius Mining Co. group at Creede, and Smuggler Union-Montana group at Telluride.

Except for two placer operations, continuous mining centered in the districts producing chiefly complex gold-silver-copper-lead-zinc ore or zinc-lead ore carrying gold and silver. Under the ore-classification system used by the Bureau of Mines, part of the complex ore falls into the dry gold and gold-silver classes, although the revenue obtained from gold and silver must be supplemented by that derived from the accompanying base metals to make the mining of the ore profitable. On the other hand, much of the ore that falls into the base-metal classes is commercial because it contains gold and silver in addition to base metals. In 1950 ores classed as dry gold, gold-silver, and silver ores totaled 560,292 tons and together yielded 43 percent of the State total gold and 45 percent of the silver; those classed as zinc, lead, copper, and mixed base-metal ores totaled 812,452 tons and yielded 42 percent of the gold and nearly 55 percent of the silver. Placer gravel yielded 15 percent of the gold and 0.11 percent of the silver.

Mining of straight gold and silver ores was confined to scattered small-scale operations. Output from the famous Cripple Creek gold district was the smallest since mining began there in 1891, as there was no market for the mill-grade ore. The new Carlton custom mill of the Golden Cycle Corp., built in the Cripple Creek district to replace the old Golden Cycle mill at Colorado Springs as a market for the ore, was nearly completed in 1950.

Ore treated by mills in Colorado in 1950 totaled 1,330,705 tons, from which were recovered 29,577 ounces of gold and 13,648 ounces of silver in bullion shipped direct to the mint and 71,836 ounces of gold and 2,713,963 ounces of silver in concentrates shipped to smelters. Ore shipped direct to smelters totaled 42,039 tons containing 9,564 ounces of recoverable gold and 760,928 ounces of silver. The total value of the gold, silver, copper, lead, and zinc recovered from the 1,372,744 tons of ore sold or treated was $28,640,429, of which $7,041,499 represented the combined value of the gold and silver and $21,598,930 that of the copper, lead, and zinc. Placer mines produced 19,413 ounces of gold valued at $679,455 and 3,739 ounces of silver valued at $3,384.

The total production of recovered gold and silver in Colorado from 1858 through 1950 has been 39,614,032 fine ounces of gold valued at $880,368,084 and 742,382,506 fine ounces of silver valued at $578,390,624.

IDAHO

The gold output in Idaho in 1950 was 79,652 fine ounces valued at $2,787,820, which represented a 2 percent increase over the 77,829 ounces valued at $2,724,015 produced in 1949, according to Almon F. Robertson of the United States Department of the Interior, Bureau of Mines.

This gain came largely from placer mines whose gold production increased from 15,078 ounces in 1949 to 17,561 ounces in 1950, while lode mines declined from 62,751 ounces in 1949 to 62,091 ounces in 1950.

The Yellow Pine lode mine in Valley County, worked by the Bradley Mining Co., continued to be by far the largest producer of gold in Idaho, producing 61 percent of the State total. It was followed, in order by; the Boise-Rochester lode mine at Atlanta of the Talache Mines, Inc.; the bucket-line dredge at Idaho City worked by the Idaho-Canadian Dredging Co.; the Wild Rose group, a bucket-line dredge at Elk City worked by the Warren Dredging Corp.; and the Red Horse Creek bucket-line dredging operation, at Elk City, worked by H. & H. Mines, Inc. These five properties produced nearly 83 percent of the State total gold in 1950.

Of the total gold produced in Idaho in 1950, 70 percent came from gold ore, 17 percent from bucket-line dredging, 4 percent from dragline dredging, and most of the remainder from zinc-lead ore. Four bucket-line dredges and 11

dragline dredges treated about 2,500,000 cubic yards of material in 1950, and recovered 17,072 fine ounces of gold.

The total production of gold, in Idaho, in terms of recoverable metal, from 1863 through 1950 has been 8,121,666 ounces valued at $187,397,713.

The output of recoverable silver in Idaho in 1950 was 16,095,019 ounces valued at $14,566,805, which was 6,045,762 ounces or 60 percent more than the 10,049,257 ounces valued at $9,095,085 produced in 1949. This State continued to be the largest producer of silver in the United States—a place it has held since 1933.

The Sunshine mine of the Sunshine Mining Co. near Kellogg remained the leading silver producer in Idaho in 1950 by a considerable margin. The other leading silver producers in order were; the Bunker Hill and Sullivan mine; the Polaris mine of the Polaris Mining Co.; the Coeur d'Alene-Jumbo or Silver Summit mine of the Silver Summit Mining Co.; the St. Germaine and Purim group of the Silver Dollar Mining Co.; the Page group of the Federal Mining and Smelting Co.; the Independence mine of the Triumph Mining Co.; and the Silver Syndicate mine of the Silver Syndicate, Inc. The Coeur d'Alene region produced 15,056,131 fine ounces of silver in 1950 or nearly 94 percent of the State total. The remainder came largely from the Warm Springs, Bayhorse and Yellow Pine districts.

Of the State total silver, silver ore yielded 60 percent, zinc-lead ore and old tailings 34 percent, lead ore 5 percent, and gold ore most of the remainder. The recovery of silver from silver ore increased 5,470,467 ounces, that from zinc-lead ore 1,207,840 ounces, that from gold ore 66,265 ounces, but that from lead ore decreased 744,150 ounces.

Twelve mines—the Sunshine, Bunker Hill and Sullivan, Polaris, Silver Summit, Silver Dollar, Page, Triumph, Silver Syndicate, Sherman, Star, Dayrock, and Morning, produced over 88 percent of the silver output of the State in 1950. Six properties (Sunshine, Polaris, Silver Dollar, Silver Syndicate, Sunshine Consolidated, and Metropolitan) near Kellogg, operated by the Sunshine Mining Co., produced 8,293,869 ounces of silver in 1950, or nearly 52 percent of the State total.

The total production of silver in Idaho, in terms of recoverable metal, from 1863 through 1950 has been 568,424,342 ounces valued at $402,418,623.

MISSOURI

Silver is the only precious metal reported in Missouri mine production; no gold production ever being recorded from 1907 through 1949, the years covered by the annual canvass of mines, according to F. F. Netzeband of the United States Department of the Interior, Bureau of Mines.

Silver is recovered as a byproduct in the smelting of lead ores from St. Francois County and of a complex lead-copper ore from Madison County. The silver content of both the lead and the lead-copper ores is so small, 1 to 2 ounces per ton of concentrates, as to be disregarded in the assay and the sale of these concentrates. Since only part of the lead is desilverized, smelter reports are the only source for recording silver production.

The silver recovery from Missouri in 1950 amounted to 236,273 fine ounces, valued at $213,839, compared with 123,413 fine ounces, valued at $111,695 in 1949. The St. Joseph Lead Co., the largest lead producing company in the United States, remained the principal producer of silver in Missouri.

MONTANA

Montana lodes in 1950 yielded 48,330 fine ounces of gold and placers 3,434 fine ounces—a total of 51,764 ounces valued at $1,811,740 according to Almon F. Robertson of the Bureau of Mines, United States Department of the Interior. Compared with 1949 the gold output declined 2 percent, due mainly to a decrease of 65 percent in production from placer operations in Granite and Lewis and Clark Counties. The decrease in placer production more than offset a 13-percent increase in output of gold recovered from zinc-lead ore. Among the State's larger gold producing properties, only the Butte Hill mines and dumps of the Anaconda Copper Mining Co., in Silver Bow County, and the American Pit mine of Victoria Mines, Inc., in Madison County, reported increases.

Of Montana's total gold in 1950, nearly 47 percent was derived from gold and silver ores (49 percent in 1949), nearly 47 percent from base metal ores (32 percent in 1949), and over 6 percent from placers (19 percent in 1949). Ores milled yielded 61 percent of the total gold, and ores shipped to smelters about 25 percent.

Leading gold producers in Montana in 1950, each with an output of 1,300 ounces or more, were the properties of the Anaconda Copper Mining Co. (copper ore and waste materials and zinc-lead ore and dumps) at Butte; the Estelle mine of the McLaren Gold Mines Co. (gold ore) in Park County; the Drumlummon mine of the Montana Rainbow Mining Co. (gold ore); and the Last Chance Gulch placer of the Porter Bros. Corp., both in Lewis and Clark County; the Ruby group of the Ruby Gulch Mining Co. (gold ore) in Phillips County; the Cornucopia mine (gold-silver ore) in Madison County; and the American Pit (Victoria) mine of the Victoria Mines, Inc. (gold ore) in Madison County. From these seven properties came over 80 percent of the State total gold in 1950.

The total production of gold in Montana, in terms of recoverable metal from 1862 through 1950, has been 17,319,824 ounces valued at $390,647,052.

The output of silver in Montana in 1950 was 6,590,747 fine ounces valued at $5,964,959. This output represents an increase of 4 percent in quantity and value over the 1949 yield. This increase was attributable to the increased output of silver recovered from zinc-lead ore mined at the Butte Hill properties of Anaconda Copper Mining Co.; it more than offset the decrease in the amount of silver recovered from copper ore mined in the same area.

Zinc-lead ore supplied 68 percent of the State silver in 1950, copper ore 26 percent, gold and silver ores 4 percent, and lead ore and zinc ore and old slag together 2 percent. Ores milled yielded 94 percent of the total silver, and smelting ores almost 6 percent; minor sources were placers and old zinc slag fumed.

The Anaconda Copper Mining Co. supplied over 88 percent of the State silver in 1950, followed by the Emma mine at Butte, Cornucopia mine in Madison County, and the Mike Horse mine in Lewis and Clark County. These 4 properties supplied 94 percent of the total silver.

The total production of silver in Montana in terms of recoverable metal from 1862 through 1950 has been 775,324,501 ounces valued at $570,765,138.

NEVADA

Nevada gold output in 1950 owing to expanded large-scale placer mining and greater yield from both gold ore and copper ore increased 37 percent over 1949, according to R. B. Maurer, of the United States Department of the Interior, Bureau of Mines. Production of silver, which was principally a constituent of fluxing ores and ores mined primarily for other metals, dropped 15 percent in 1950 compared with 1949. Base-metal ores accounted for 63 percent of the silver recovered in 1949.

The output of gold from Nevada ores, old tailings, and gravels in 1950 was 178,447 fine ounces valued at $6,245,645 compared with 130,399 fine ounces valued at $4,563,965 in 1949. Production of silver in 1950 was 1,537,217 fine ounces valued at $1,391,259, compared with 1,800,209 fine ounces valued at $1,629,280 in 1949.

Gold was recovered from the following sources: Gold ore, 45 percent; copper ore, 28 percent; placer gravel, 20 percent; gold-silver ore, 3 percent; zinc-lead ore, 3 percent; and all other ores, 1 percent. Metallurgical data show that 49 percent of the lode gold was recovered by cyaniding ore and old tailings, 45 percent by smelting concentrates, 3 percent by the direct smelting of ore and old tailings, and 3 percent by amalgamation of ore and old tailings.

The principal Nevada gold mines in 1950, listed by operating companies and in order of output were: Kennecott Copper Corp. (Nevada Mines Division), White Pine County (copper ore); Getchell Mine, Inc., Humboldt County (gold ore); Natomas Co., Lander County (bucket-line dredge); London Extension Mining Co., Lander County (gold ore); Round Mountain Gold Dredging Co., Nye County (placer); Consolidated Coppermines Corp., White Pine County (copper ore); Goldfield Deep Mines Co. of Nevada, Esmeralda County (gold ore); Chessher & Co., Mineral County (gold ore); Combined Metals Reduction Co., Lincoln County (zinc-lead ore); and Dayton Consolidated Mines Co., Storey County (gold ore).

Nevada silver was recovered from the following sources in 1950: Zinc-lead ore, 39 percent; gold-silver ore, 21 percent; copper ore, 10 percent; silver ore, 9 percent; lead ore, 8 percent; gold ore, 6 percent; zinc-lead-copper ore, 4 percent; zinc ore, 1 percent; lead-copper ore, 1 percent; and placer gravel, 1 percent. The smelting of concentrates accounted for nearly 56 percent of the lode silver produced in Nevada in 1950, 23 percent was recovered by cyaniding ore and old tailings and 21 percent came from the direct smelting of ore and old tailings. A negligible quantity of silver was recovered by amalgamation of ore and old tailings

The principal silver mines in Nevada in 1950, listed by operating companies and in order of output were: Combined Metals Reduction Co., Lincoln County (zinc-lead ore); Summit King Mines, Ltd., Churchill County (gold-silver ore); Kennecott Copper Corp. (Nevada Mines Division), White Pine County (copper ore); Central Comstock Mines Corp., Storey County (gold-silver tailings); Bristol Silver Mines Co., Lincoln County (zinc-lead-copper ore); Ely Valley Mines, Inc., Lincoln County (zinc and zinc-lead ores); Pansy Lee Mining Co., Humboldt County (gold-silver ore); McFarland & Hullinger, Elko County (lead ore); Consolidated Coppermines Corp., White Pine County (copper ore).

NEW MEXICO

The high cost of labor and materials compared with the fixed price of gold since World War II has almost eliminated straight gold and gold-silver mining as a material factor in the metal-mining industry of New Mexico. In 1950 only 458 fine ounces of gold and 13,119 fine ounces of silver, valued together at $27,903, were produced from gold and gold-silver ores and placer gravel. In the prewar year 1940 these two classes of ore and the placer gravel washed yielded 22,068 ounces of gold and 791,442 ounces of silver with a combined value of $1,335,183. In 1950 gold recovered as a byproduct from base-metal ores (mostly copper ore) amounted to 2,942 ounces; the State total output of gold was 3,414 fine ounces valued at $119,490 compared with 3,249 ounces valued at $113,715 in 1949.

In the Mogollon district (Catron County), 118 tons of gold-silver ore were produced in 1950 from the Lehigh Metals Co. Fanney Consolidated mine, operated from January 1 to March 6. Other small producers of gold or gold-silver ore were the Big John property in the Mogollon district, Malone Darhasana in the Burro Mountains district, Gold Spot in the Central district, Geo. Schaffer in the Pinos Altos district, Carlisle and Alabama in the Steeple Rock district, H. Grant and Anita in the Lordsburg district, Pershing in the Nogal district, North Homestake in the White Oaks district, Shamrock in the San Pedro (Golden) district, Minnehaha in the Chloride district, and Anderson Extension, El Oro, and Snake in the Hillsboro district. Two small placers in the Pinos Altos district produced 6 ounces of gold.

The New Mexico output of silver in 1950 comprised 134,669 ounces recovered from zinc ore, 127,455 ounces from copper ore, 37,887 ounces from zinc-lead ore, 31,941 ounces from gold, gold-silver, and silver ores, and 6,629 ounces from lead and lead-copper ores—a total of 338,581 ounces compared with 380,855 ounces in 1949. The value of the silver was $306,433 in 1950 and $344,693 in 1949. The principal factor in the large decrease in production of silver in 1950 was a heavy decline in output of copper ore carrying considerable gold and silver from the Atwood mine in Hidalgo County. The leading producers of silver in 1950 were the Bonney-Miser's Chest copper mine in Hidalgo County and the Ground Hog zinc-lead mine and the Hanover (Empire Zinc) zinc mine in Grant County.

Ores of gold, silver, copper, lead, and zinc mined in New Mexico in 1950 totaled 7,899,054 tons, comprising 7,510,499 tons of copper ore, 364,370 tons of zinc and zinc-lead ores, 18,045 tons of lead ore, 3,924 tons of silver ore, 2,160 tons of gold and gold-silver ores, and 56 tons of lead-copper ore. The total value of the copper, lead, and zinc recovered from the ores was $37,011,992 and that of the combined gold and silver $425,923.

The total production of gold and silver in New Mexico, in terms of recovered metals, from 1848 through 1950 has been 2,196,058 fine ounces of gold valued at $50,196,223 and 69,527,674 fine ounces of silver valued at $54,549,775.

OREGON

Oregon gold production in 1950, reflecting curtailed dredging, fell 32 percent below the 1949 output according to R. B. Maurer, of the United States Department of the Interior, Bureau of Mines. Silver production, by virtue of lode mining, increased 11 percent over the minor yield of 1949.

The production of gold from Oregon ores and gravels was 11,058 fine ounces (including the fine gold content of "natural" gold sold on the open market) valued at $387,030 in 1950 compared with 16,226 fine ounces valued at $567,910 in 1949. Placer mines contributed 82 percent of the gold and 87 percent of the placer gold was recovered by bucket-line dredges, 5 percent by hydraulicking, 5 percent by dragline dredging, and 3 percent by other methods. Lode mines produced 18

percent of the total gold and 95 percent of the lode gold was derived from dry gold ore, 4 percent from zinc ore and 1 percent from gold-silver ore. Metallurgical data show that ultimate recovery of 65 percent of the total lode gold was from smelting of concentrates, nearly 26 percent from the smelting of ore and old tailings, 9 percent was as bullion from amalgamation of ore and less than 1 percent from cyanidation of old tailings. The leading Oregon gold producers in 1950, in the order named, were the Powder River Dredging Co., successor to Baker Dredging Co., Sumpter district, Baker County, and Porter & Co., Granite district, Grant County (bucket-line dredges), and the Champion Lease operating the Champion mine, Bohemia district, Lane County (gold ore).

Oregon ores and gravels in 1950 yielded 13,565 ounces of silver valued at $12,277 compared with 12,195 ounces valued at $11,037 in 1949, an increase of 12 percent in both quantity and value. Oregon silver in 1950 came principally from Grant, Lane, Jefferson, and Baker Counties. Of the State's total silver, lode mines furnished 86 percent and placer mines, 14 percent. Dry gold ore was the principal source of lode silver and smelting of concentrates the principal method of recovery.

SOUTH DAKOTA

Production of gold and silver in South Dakota in 1950 was reported from only two mines, the Homestake at Lead and the Bald Mountain at Trojan, both in Lawrence County, according to Samuel A. Gustavson, of the United States Department of the Interior, Bureau of Mines. However, output increased 22 percent for gold and 30 percent for silver over that of 1949. No placer production was reported.

In terms of recovered metals, production of gold in 1950 was 567,996 fine ounces valued at $19,879,860 and silver was 142,065 fine ounces valued at $128,576. In 1949 production was 464,650 ounces of gold valued at $16,262,750 and 109,383 ounces of silver valued at $98,997. The total production of gold and silver in South Dakota from 1876 through 1950 has been 22,863,991 ounces of gold valued at $581,836,894 and 10,145,834 fine ounces of silver valued at $7,314,407.

The Homestake Mining Co. operated its mine and beneficiation plants in the Whitewood district, Lawrence County, throughout 1950. The mine is operated through three shafts, the deepest being 4,245 feet, with an inside winze to the 5,000-foot level. According to the company's annual report, a total of 1,265,118 tons of ore with an average value of $14.10 per ton was mined and beneficiated. The mill has a capacity of 4,000 tons per 24 hours, using both amalgamation and cyanidation methods of recovery. Dividends paid during 1950 were $5,525,520. From 1876 to 1950, inclusive, this mine yielded bullion and concentrates that brought a net return of $513,377,199 and paid $171,192,224 in dividends.

The Bald Mountain Mining Co., the only other producer of gold and silver in the State in 1950, operated its property which includes the Empire, Portland, Dakota, Clinton, Two Johns, Ajax-Alaska, Trojan, Foley, American Express, and "Mogul Mines Co." claims. The company milled 126,044 tons of ore in its cyanidation mill for a daily average of 345 tons in 1950.

STATES EAST OF THE MISSISSIPPI RIVER

Production from the Region in 1950 was 2,090 fine ounces of gold valued at $73,150 and 113,355 fine ounces of silver valued at $102,592, according to Samuel A. Gustavson, of the United States Department of the Interior, Bureau of Mines. In 1949 the output was 1,967 ounces of gold valued at $68,845 and 101,612 ounces of silver valued at $91,964, indicating increases in 1950 over 1949 in output and value of 6 percent for gold and 12 percent for silver.

In the States east of the Mississippi River, most of the gold is recovered as a byproduct of mining copper and is recovered from slimes in the electrolytic refining of this copper. In Maryland one gold mine was operated intermittently in 1949 and 1950, producing 20 fine ounces of gold, all of which has been credited as 1950 production. The output of this mine constitutes all the production of gold from gold ores in the region during 1950. No gold from placer operations was reported. Economic conditions (chiefly, increasing labor and material costs, with no change in the value of gold) continued to be unfavorable to lode or placer gold mining. Byproduct sources of gold in 1950, as has been the case for several years, were from magnetite-pyrite-chalcopyrite ore from the Cornwall mine, Lebanon County, Pennsylvania; copper ore from the Elizabeth mine, Orange County, Vermont; and copper-iron-zinc ore from the Tennessee Copper Co. mine, Polk County, Tennessee.

1913, 1915 to 1916, 1932 to 1938, and 1947. The silver was recovered as a by-product from copper, gold, and lead ores and placer gravel.

Distribution of gold and silver production of the United States, in fine ounces, for 1950, by sources of production (table furnished by the Bureau of Mines)

State	Gold			Silver		
	Lode mines	Placer mines		Dry and siliceous ores [1]	Lead ores [2]	Copper ores
		Floating bucket-line dredges	All other			
Alaska	12,161	205,641	71,470	39,938	12,700	
Arizona	118,171		142	441,839	2,030,003	2,853,599
California	163,815	223,164	25,139	85,438	959,648	26,831
Colorado	110,977	[3] 18,084	1,329	1,578,809	1,900,388	13,081
Idaho	62,091	13,549	4,012	9,914,894	6,160,087	20,038
Missouri					236,273	
Montana	48,330	2,946	488	286,231	4,574,905	1,729,611
Nevada	142,069	[4] 36,074	304	578,688	810,930	147,599
New Mexico	3,408		6	31,941	179,185	127,455
Oregon	2,036	7,827	1,195	12,780	785	
South Dakota	567,996			142,065		
Texas	49				2,454	
Utah	457,547		4	721,350	3,049,509	3,312,949
Washington	92,078		39	182,764	180,507	385
Wyoming						
States east of the Mississippi	[5] 2,090				34,629	[5] 78,726
Total	1,782,818	507,285	104,128	14,016,737	20,132,003	8,310,274

[1] Includes small quantity of silver from placer mines (77,868 fine ounces).
[2] Includes silver in lead, lead-copper, zinc, zinc-lead, zinc-copper, and zinc-lead-copper ores.
[3] Production by dragline dredges included with that by bucket-line dredges; Bureau of Mines not at liberty to publish separately.
[4] Production by nonfloating washing plants included with that by bucket-line dredge; Bureau of Mines not at liberty to publish separately.
[5] Includes magnetite-pyrite-chalcopyrite ore.

ADDENDA TO REPORT OF THE DIRECTOR OF THE MINT

ADDENDA TO REPORT OF THE DIRECTOR OF THE MINT

Bases Used for Mint Service Statistics

Gold and silver, as well as minor coinage metals, are accounted for by quantity as well as by value. Most of the published mint service statistics pertaining to such metals are on a primary quantity basis rather than a primary value basis because, in some degree, the value factor antedates the quantity factor, as when advance partial payments are made on large deposits of bullion or foreign coin pending determination by melt, assay, and computation, of the exact quantities and values of the materials deposited. The *quantity basis* comprises received bullion, the quantity and value whereof have been finally determined, whether or not paid for; also melted coin that has been reviewed and classified after having been received as withdrawn from monetary use. The *value basis* comprises received bullion, the quantity and value whereof have been finally determined, whether or not paid for; also received bullion to the value of advance payments thereon prior to making final determinations; and received but unreviewed coin that has been withdrawn from monetary use. To effect reconciliation between the quantity basis and value basis, from period to period, would require consideration also of prior period advances.

The tabulations of "Deposits and purchases" include received metal for which payment is made in bars bearing the Government stamp, as well as that paid for by check or in cash. In these tabulations, prior to the fiscal year 1940, the receipt classification item of "Domestic refinery bullion" included that refined from new production of both domestic and foreign mines, also old or secondary source metals, with inconsiderable amounts from small refineries that worked only old materials. Beginning with the fiscal year 1940 segregation of these items has been made in the tabulations.

Stock of domestic coin.—Consists of an estimate made in 1873 of gold and silver coin, the former of which was revised in 1907, with annual addition of new coinage and reported imports, and deduction of withdrawn coin, reported exports, and an estimate for industrial use and general disappearance; from 1928 to 1933 the additional factor of gold coin "earmarked," or set aside for foreign owners, was considered, such transactions being equivalent to exports and releases thereof being equivalent to imports. After 1933 gold coin has been omitted as such; any unmelted gold coin on hand is treated as bullion. In 1928 minor coin was added, considering only coins of the type commonly in circulation, the amounts coined, those withdrawn for recoinage, and general disappearance. The monetary stock tables for a series of years have been revised back to the establishing of the Federal Reserve System (1914) to include minor coin back to 1900. The item of coin withdrawn as used in the stock compilation omits the coin received for recoinage but not yet reviewed, which coin is subject to classification adjustments.

Domestic coin made.—These data cover the coin delivered from the manufacturing department to the issuing (cash) division, and include the new coin made from withdrawn old coin, as well as all other newly made coin. It is now required that all coins be delivered to the cash division during the year impressed on such coins; during the earlier years this was not always done.

LIST OF TABLES IN THE ADDENDA

Page

Number of gold and silver deposit transactions and assay determinations during the fiscal year 1951 37
Number of gold and silver deposit transactions and assay determinations during the calendar year 1950 37
Deposits and purchases of gold during the fiscal year 1951 38
Deposits and purchases of silver during the fiscal year 1951 40
Deposits and purchases of gold during the calendar year 1950 42
Deposits and purchases of silver during the calendar year 1950 44
Deposits of foreign gold bullion and coin during the fiscal year 1951 46
Deposits of foreign silver bullion and coin during the fiscal year 1951 46
Deposits of foreign gold bullion and coin during the calendar year 1950 47
Deposits of foreign silver bullion and coin during the calendar year 1950 47
Domestic coins, including assay pieces, withdrawn from monetary use during the fiscal year 1951 48
Domestic coins, including assay pieces, withdrawn from monetary use during the calendar year 1950 49
Standard silver dollars (uncurrent) melted for recoinage into subsidiary coin 50
Standard silver dollars (mutilated) purchased as bullion for use in the manufacture of subsidiary silver coin since 1883 50
Silver coin (including silver dollars) withdrawn from circulation for recoinage into subsidiary coin since 1890 50
Sales of Treasury silver under act of July 31, 1946, during fiscal years 1947–51 50
Estimated monetary stock of gold and silver in the United States and the amount per capita at the close of each fiscal year 1936–51 51
Summary of newly mined domestic silver purchased by the Treasury, fiscal years 1934–51 52
Detailed receipts of the Bureau of the Mint for the fiscal year ended June 30, 1951 53
Cash assets and liabilities of the United States Mint Institutions on June 30, 1951 54
Cash assets and liabilities of the United States Mint Institutions on December 31, 1950 55
United States coinage during the calendar year 1950 56
Authority for United States coinage, by class and denomination, with standard weight and fineness, and total coined 56–59
United States coinage during the past 10 fiscal years, by denomination and number of pieces 60
United States coinage during the past 10 fiscal years, by denomination and face value 61
Estimated stock of coins in the United States on June 30, 1951 62
Minor coins outstanding on June 30, 1951 62
Estimated stock of coins in the United States on December 31, 1950 62
Coinage by the United States mints for other countries during the calendar year 1950 63
Summary of foreign coinage by United States mints, by countries, through December 31, 1950 63
Summary of foreign coinage by United States mints, by year, through December 31, 1950 63
Price of silver in New York 1950–51 64
Price of silver in London 1950–51 64
Highest, lowest, and average price of silver per fine ounce in New York since 1874 65
Bullion value of the silver dollar [371 ¼ grains of pure silver] at the annual average price of silver each calendar year since 1837 65
Average commercial ratio of silver to gold each calendar year since 1837 66
Summary of total United States exports and imports of gold and silver during the fiscal year 1951 66
Summary of total United States exports and imports of gold and silver during the calendar year 1950 66
(*See also* World Monetary Statistics.)
